In this hilarious non-fiction chapter book series, a savvy cockroach shares wise tips and tricks to surviving an encounter with a charming predator who may (or may not) want to be your friend. Celeste is a cockroach, and everyone knows that cockroaches are survivors, so who better to give advice on surviving an encounter with a polite predator? Everyone also knows that taking a moonlit promenade with a deadly reticulated python (named Frank) is a very bad idea. But

Celeste loves very bad ideas, and she is willing to put your life on the line to prove herself right! Need to stop a python from swallowing you head-first? Wear a lamp shade as a hat! Want to speed up a three-hundred-pound snake? Try roller skates! What's the perfect light snack for a python? A chicken! Using her superior pythonine knowledge, Celeste comes up with various strategies and solutions -- many dangerous, most absurd, but all based on the biology of pythons. Meanwhile, Frank is hatching his own plans. Rachel Poliquin has created a delightfully preposterous premise that, combined with Kathryn Durst's hilarious illustrations, will have readers laughing out loud as they

learn about python biology and hunting behavior.

An outstanding new reference work REMOTE SENSING for the Earth Sciences Remote Sensing for the Earth Sciences is a comprehensive, up-to-date resource for geologists, geophysicists, and all earth scientists. Produced in cooperation with the American Society for Photogrammetry and Remote Sensing, it is the third volume of the Manual of Remote Sensing, Third Edition, the widely accepted basic reference work in the field. It brings together contributions from an international team of scientists active in remote

sensing and earth sciences research. The book is organized for quick access to topics of particular interest, beginning with coverage of spectral characteristics that focuses on the theory of rock, mineral, soil, and vegetation spectra, as well as planetary geology. The second section on data analysis is devoted to procedures used in information extraction and techniques used in the visual display of data, particularly in the integration of various geospatial data. The third section addresses applications of remote sensing in areas such as mineral and hydrocarbon

exploration, stratigraphic mapping, engineering geology, and environmental studies. The final chapters offer a discussion of sensors relevant to the earth sciences-including radar, visible, infrared, and geophysical sensors-along with case study examples. Complete with color figures, helpful illustrations, and thorough references-including Internet sources -this volume is a major resource for researchers and practitioners working in the earth and environmental sciences.

The rapid decline in the world's linguistic diversity has prompted the emergence of documentary

linguistics. While documentary linguistics aims primarily at creating a durable, accessible and comprehensive record of languages, it has also been a driving force in developing language annotation and analysis software, archiving architecture, improved fieldwork methodologies, and new standards in data accountability and accessibility. More recently, researchers have begun to recognize the immense potential available in the archived data as a source for linguistic analysis, so that the field has become of increasing importance for typologists, but also for neighbouring disciplines. The present volume contains contributions by practitioners of language documentation, most of whom have been involved in the Volkswagen Foundation's DoBeS programme (Dokumentation Bedrohter Sprachen). The topics covered in the volume reflect a field that has matured over the last decade and includes both retrospective accounts as well as those that address new challenges: linguistic annotation practice, fieldwork and interaction with speech communities, developments and challenges in archiving digital data, multimedia lexicon applications, corpora from endangered languages as a source for primary-data typology, as well as specific areas of linguistic analysis that are raised in documentary linguistics.

In partnership with the Centre for Addiction and Mental Health (CAMH), Tundra is proud to launch an important series of books for children who have to cope with adult-sized problems. Young Alex's father had been a policeman until he began to suffer from depression, perhaps the most common mental health

issue we face. Alex's questions are those that are often asked by the children of parents who have depression: is the parent simply lazy? Does he no longer care? And is it something I can catch, like a cold? In simple, straightforward language, the book explains what depression is and how it is treated. It also prepares a child for working with a helping professional. And perhaps most important, it reassures a child that he or she is not alone. Written by Canada's foremost experts in the field, this is an important book to spur discussion and allay fears of those affected by

depression.
