BUILDING FUTURES An approach to Information Modeling engaging concepts of equality, sustainability, and labor as they relate to

environment and architectural practice  
Building Futures: Technology, Ecology, and Architectural Practice explores how architects, and the buildings and environments we create, can engage future realities, both abstract and readily understood. These range from climate change and public health to advanced ideas about manufacture and construction. The text demonstrates multiple and hybrid paths in which building information modeling (BIM) and outgrowth technological processes including environmental simulation and human-robot interaction can be utilized in today ' s contemporary context, expanding the architect ' s agency by focusing on a more conceptual, and ecological, basis for our work. Moving

---

beyond a basic understanding of the role of computation in architecture and design, the work shows how to think critically and speculatively about technology ' s deeper and more lasting impacts on both architecture and society. Topics covered in Building Futures include: Technology: information modeling and the relationship between computational and real objects, new approaches to coding in architectural design, and direct-to-manufacture workflows Environment: understanding part-to-whole relationships at a variety of scales and the interconnectedness of things, post-subjective architectural approaches to ecology, and new ideas about sustainability Practice: revisiting architecture by remote control in the time of new global challenges, and novel ideas about creativity, authorship, and professionalism Design professionals and practice leaders grappling with the relationship of technology to design pedagogy will use Building Futures to better theorize and execute their architectural vision. Students in upper-level courses studying technique and theory will also find value in the work, which prepares incoming professionals for the major changes that the Architecture, Engineering, and Construction (AEC) industry may undergo in the coming years and decades. “ The book prompts us to consider simulating events where architecture and architects could

---

mitigate, redirect or develop contingencies, in relation to the environment, flows of material and capital, and other “ things ” that operate from the immediate, through to almost geological timescales. ” From the Foreword by Robert Stuart-Smith, Director of the Autonomous Manufacturing Lab, University of Pennsylvania  
PITMAN CONSTRUCTION SOLUTION. Taylor & Francis

This book covers the management of mechanized tunneling with examples from global projects. It starts with an introduction to mechanized tunneling including management of job organization, planning job sites, portals, or launching boxes in mountains/open fields and urban areas. The management of the transport with belt conveyors, locomotives, and multi-service vehicles is explained

with numerical examples. Cost management and basic parameters governing tunneling costs in different countries are discussed. Risk management in mechanized tunneling projects is also explained. Features: Offers the practical issues with setting up a job site, the cost, and logistic issues related to tunneling. Reviews cost management and basic parameters governing tunneling costs in different countries. Covers treatment of spoil management plan and the management of contaminated ground. Explores key points on the logistics and the management of the consumables. Provides the latest international case studies of specific companies. This book is aimed at professionals and researchers in tunneling, civil and mining engineering, and geology.

Mergers & Acquisitions (M&A) are important strategic business options for corporations. Yet, the understanding of industry-specific drivers of M&A transactions is more than limited. Characterized by highly fragmented markets, cross-company production structures and increasing

international business scope, the construction industry represents an attractive field of research to address questions on M&A motives. Based on comprehensively selected datasets and state-of-the-art empirical methods, the study illustrates the motives, the strategy and the effects of M&A transaction within the construction industry. Overall the analyzed M&A transactions tend to lead to an increase of corporate wealth. Important factors for a positive development comprise the peculiarities of the

---

construction industry, the general market conditions and the nature of many takeovers. Still, the M&A transactions may also cause significant value destruction and may even lead to a failure of a company if an inappropriate strategy is applied.	in helping to meet this challenge. The term mass customisation denotes an offering that meets the demands of each individual customer, whilst still being produced with mass production efficiency. Today mass customisation is emerging from a pilot stage into a scalable and sustainable strategy...
<u>The World Bank Group A to Z</u> 2016 Routledge	
Challenged by the recent economic crisis, the building and construction industry is currently seeking new orientation and strategies. Here mass customisation is uncovered as a key strategy	The first dedicated publication of its kind, this book provides a forum for the concept within an applied and highly innovative context. The book includes contributions from some of the most

---

prominent thinkers and practitioners in the field from across the world, including Kasper S. Vibæk, Steve Kendall, Martin Bechthold, Mitchell M. Tseng, and Masa Noguchi. Bringing together this panel of experts who have carried out research both in academia and practice, this book provides an overview of state-of-the-art practice related to the concept of customisation and personalisation within the built environment.

Discover 427 innovative and eco-conscious business ideas tailored for a sustainable future in "427 Eco-Friendly Business Ideas: Project Report Overviews." This comprehensive guide not only provides a wealth of green business concepts but also offers insightful project report overviews, giving you a glimpse into the practical implementation and potential impact of each idea. From renewable energy startups to zero-waste initiatives, this book covers a wide range of eco-friendly ventures suitable for entrepreneurs, environmental enthusiasts, and business

---

professionals alike. Each idea is accompanied by a concise project report overview, detailing key aspects such as feasibility, market analysis, environmental impact assessment, and more. Whether you're seeking inspiration for your next green business endeavor or looking to deepen your understanding of sustainable entrepreneurship, "427 Eco-Friendly Business Ideas: Project Report Overviews" is your essential resource for navigating the landscape of eco-conscious innovation. Dive in, explore, and embark on the journey towards a greener, more sustainable future today.

## Site Management of Building Services Contractors

Centerline Production

This book contributes to the empirical understanding of how arbitrators make their decisions on the substance of commercial disputes arising from international construction projects. It is based on in-depth interviews with 28 international construction arbitrators and on the analysis of dozens of international construction arbitration awards. The combined experience of those who participated in the

---

author's research amounted to hundreds of international construction arbitrations (~ 300 cases) in addition to several hundred international commercial arbitrations. It presents the results of the first and largest research to be undertaken in this area, and it will be useful to arbitration practitioners and scholars and to the wider audience of dispute resolution students, practitioners, and theorists. In turn, the book examines to what extent international arbitrators apply the law as the substantive norm, providing an explanation for that, and then offers insights into whether arbitrators, in fact, lean towards commercial and transnational norms to construe the parties' contract before discussing to what extent international arbitrators take into account fairness considerations to reach their decisions on the merits of the parties' claims. The book also examines to what extent international arbitrators apply mandatory rules of foreign law. Lastly, it provides insight into the

---

effect of arbitrators' background characteristics on their decisions. Written for arbitration practitioners (arbitrators and legal counsel) and scholars, the book will be useful for both experienced arbitrators and those starting their arbitration career or studying for their arbitration qualification. It will also be useful for project professionals involved in contract management and dispute resolution.

The audience for this book in the United States alone is well over half a million: construction managers (389,000), architects (113,000), engineers (228,000), and urban planners (32,000)

CleanRooms World Bank Publications  
Concrete Solutions contains the contributions from some 30 countries to Concrete Solutions, the 6th International Conference on Concrete Repair (Thessaloniki, Greece, 20-23 June 2016). Strengthening and retrofitting are major themes in this volume, with NDT and electrochemical repair following closely, discussing the latest advances and technologies in concrete repair. The book

brings together some interesting and challenging theoretical approaches and questions if we really understand and approach such topics as corrosion monitoring correctly. Concrete Solutions is an essential reference work for those working in the concrete repair field, from engineers to architects and from students to clients. The Concrete Solutions Series of international conferences on concrete repair began in 2003 with a conference held in St. Malo, France in association with INSA Rennes. Subsequent conferences have seen the Series partnering with the University of Padua (Italy) in 2009, with TU Dresden (Germany) in 2011 and with Queen's University Belfast (Northern Ireland) in 2014.

---

In 2016 Thessaloniki (Greece) hosted the conference, partnering with both Aristotle University of Thessaloniki (AUTH) and Democritus University of Thrace (DUTH). The next conference in the series will be held in 2019 in Istanbul.

The World Bank Group's of evidence and experiential work in all of these areas now knowledge across the five focuses on two new twin goals:

---

eliminating extreme poverty by 2030 and boosting shared prosperity of the poorest 40 percent in every developing country.

Building Systems Routledge

The services sector is key to economic growth, competitiveness, and poverty alleviation. Comprising more than two-thirds of the world economy, services are now commonly traded across borders, helped by technological progress and the increased mobility of persons. In recent years, a number of developing countries have looked at trade in services as a means to both

respond to domestic supply shortages and to diversify and boost exports. Any country can tap into the trade potential of services, but not every country can become a services hub across sectors. The opening of the services sector potentially comes with large benefits, but also fears and costs that should not be overlooked. This book provides useful guidelines for the assessment of a country's trade potential, and a roadmap for successful opening and export promotion in select services sectors. It looks at both the effects of increased imports and exports, and

---

provides concrete examples of developing country approaches that have either succeeded or failed to maximize the benefits and minimize the risks of opening. It focuses on sectors that have been rarely analyzed through the trade lens, and/or have a fast growing trade potential for developing countries. These sectors are: accounting, construction, distribution, engineering, environmental, health, information technology, and legal services. This book is designed for non-trade specialists to understand how trade can help improve access to

key services in developing countries, and for trade specialists to understand the specific characteristics of each individual sector. It will be a useful tool for governments to design successful trade opening or promotion strategies, and for the private sector and consumers to advocate sound domestic policy reforms accompanying an offensive trade agenda.
