A Springer Series on Medical Education book "This is a book about the origins, design,

implementation, and effects of the [Primary Care Curriculum at the University of New Mexico School of Medicine]. It is also so much more. It is a first-person account of a moving human experience, in which some deeply caring people search for ways to provide a humane, effective learning experience for students who are seen as preparing to be practitioners of a humane, changing profession....In the 1920s, Gertrude Stein observed that the United States was now the oldest country in the world, for it was the first to join the twentieth century. Perhaps, we must now view the University of New Mexico's PCC as among the oldest programs in medical education, for it may prove to have been one of the first to join the twenty-first century."--Hilliard Jason, MD, EdD, Director, National Center for Faculty Development in the Health Professions, University of Miami School of Medicine

Videodiscs in Healthcare: A Guide to the Industry Cengage Learning

The Inclusion-Based Boundary Element Method (iBEM) is an innovative numerical method for the study of the multi-physical and mechanical behaviour of composite materials, linear elasticity, potential flow or Stokes fluid dynamics. It combines the basic ideas of Eshelby's Equivalent Inclusion Method (EIM) in classic micromechanics and the Boundary Element Method (BEM) in computational

mechanics. The book starts by explaining the application and extension of the EIM from elastic problems to the Stokes fluid, and potential flow problems for a multiphase material system in the infinite domain. It also shows how switching the Green's function for infinite domain solutions to semi-infinite domain solutions allows this method to solve semi-infinite domain problems. A thorough examination of particle-particle interaction and particle-boundary interaction exposes the limitation of the classic micromechanics based on Eshelby's solution for one particle embedded in the infinite domain, and demonstrates the necessity to consider the particle interactions and boundary effects for a composite containing a fairly high volume fraction of the dispersed materials. Starting by covering the fundamentals required to understand the method and going on to describe everything needed to apply it to a variety of practical contexts, this book is the ideal guide to this innovative numerical method for students, researchers, and engineers. The multidisciplinary approach used in this book, drawing on computational methods as well as micromechanics, helps to produce a computationally efficient solution to the multi-inclusion problem. The iBEM can serve as an efficient tool to

conduct virtual experiments for composite materials with various geometry and boundary or loading conditions. Includes case studies with detailed examples of numerical implementation. New Perspectives on Microsoft Office 2003 CRC Press

Work-based learning, in which professional work experience is closely integrated with professional study, now forms an important part of many courses in tertiary institutions. A Model for Work-Based Learning offers a plan designed to enhance the professional experience through facilitated mentoring and reflective learning, and is based on an internship that has proven highly successful over the last ten years at the University of Canberra. This strategy, which features collaborative teaching and learning, is applicable to other professional courses within tertiary environments. Part 1 describes the research base for all aspects of the model and shows how a program based on the theoretical model can be implemented, bringing together facilitated

mentoring and theory. Part 2 contains a range of activities that can be used by educators during all aspects of the work experience, from preparing students and mentors through assisting the student's move into the professional workforce. The conclusion explores the crucial success factors of the work-based learning model. This volume is an invaluable guide to educators and mentors in the workplace.

This new Edition of Electronic Commerce is a complete update of the leading graduate level/advanced undergraduate level textbook on the subject. Electronic commerce (EC) describes the manner in which transactions take place over electronic networks, mostly the Internet. It is the process of electronically buying and selling goods, services, and information. Certain EC applications, such as buying and selling stocks and airline tickets online, are reaching maturity, some even exceeding non-Internet trades. However, EC is not just about buying and selling; it also is about electronically communicating, collaborating, and discovering information. It is about e-learning, e-government, social networks, and much more. EC is having an impact on a significant portion of the world, affecting businesses, professions, trade, and of course, people. The most important developments in EC since 2014 are the continuous phenomenal growth of social networks, especially Facebook, LinkedIn and Instagram, and the trend toward conducting EC with

mobile devices. Other major developments are the expansion of EC globally, especially in China where you can find the world's largest EC company. Much attention is lately being given to smart commerce and the use of AI-based analytics and big data to enhance the field. Finally, some emerging EC business models are changing industries (e.g., the shared economy models of Uber and Airbnb). The 2018 (9th) edition, brings forth the latest trends in e-commerce, including smart commerce, social commerce, social collaboration, shared economy, innovations, and mobility.

Current teaching, learning and assessment practices can lead students to believe that courses within a programme are self-sufficient and separate. Integrative Learning explores this issue, and considers how intentional learning helps students become integrative thinkers who can see connections in seemingly disparate information, and draw on a wide range of knowledge to make decisions. Written by international contributors who engaged reflectively with their teaching and their students' learning, the book seeks to develop a shared language of integrative learning, encouraging students to adapt skills learned in one situation to problems encountered in another, and make autonomous connections across courses, between experiences, and throughout their lives. More informed teachers can help students develop the necessary attributes for intentional learning, which include having a sense of purpose, fitting fragmentary information into a 'learning framework', understanding something of their own learning processes, asking probing questions, reflecting on their own choices, and knowing when to ask for help. Integrative Learning draws on international research and vast studies to provide the reader with the resources to ensure access to a unified learning experience. The book discusses conceptual and technical tools necessary

for facilitating integrative learning across a range of disciplines as well as providing learning pedagogies and considers integrative learning in the context of the relevance of higher education in the complexity and uncertainty of the 21st century. It will appeal to academics and researchers in the field of higher education, as well as those generating higher education curriculums.

Summary: "Learning Discourses and the Discourses of Learning is an edited collection of papers exploring issues of teaching and learning in academic settings. The key theme of the volume is 'discourses' - especially as these relate to institutional policies, disciplinary practices and students' processes of

learning in the academy. Particular attention is paid to the experiences of second-language students studying at Australian universities as well as those learning foreign languages in Australia. Employing a variety of methodologies and theoretical perspectives, the papers in Learning Discourses are unified by a focus on rich and socially situated empirical data. The book addresses issues highly pertinent to the dynamic character of contemporary higher education in Australia, one dominated by trends towards the internationalisation and professionalisation of university programs, and the growing intercultural nature of social and academic interactions. Part one covers issues of discourse and change, exploring processes of discourse acquisition and production in a range of disciplinary contexts, along with the nexus between academic and professional discourses. Part two deals with broader issues of the participation and socialisation of students in second-language-use situations, ranging from macro (social planning and policy) issues to the micro (interpersonal) level. Part three looks at the social mediation of foreign language learning covering a range of tertiary and secondary settings in Australia and has a particular focus on Japanese as a foreign language."--Publisher description.
