This research examines and analyses

the diversity of television content.

More specifically, it provides an in-
depth study of the development of
television content. We attempt to study
content through the concept of
diversity, which is considered as being
a methodological tool that records and
describes trends in television
programming. Through the
methodological use of diversity, the
rationale behind the programming
structure is presented and, therefore,
the structures that create and
constitute the content can be shown. A
detailed discussion is developed, as
well as a new approach to television
diversity, in light of the methodological
examination.
