From the Sunsets Department and Geyser Regulation to the Department of Miracles, Heaven Inc has the earth covered. Unless someone is away from their desk. And these days, the CEO is kind of disillusioned. God knows he should be keeping an eye on the bad things happening on Earth, but instead he finds himself watching the Church channels on satellite TV. His first priority is the team of angels he's asked to get Lynyrd Skynyrd back together. Downstairs on the office floor, Eliza has been promoted from the Prayers Department to Miracles, and Craig, the only other workaholic in heaven, has to show her around. Eliza is shocked by the casual attitude of many of the angels in her new department. And she's furious when she discovers that God has never looked at, let alone

When the first Disneyland opened its doors in 1955, it reinvented the American amusement park and transformed the travel, tourism and entertainment industries forever. Now a global vacation empire, the original park in Anaheim, California, has been joined by massive complexes in Florida, Tokyo, Paris, Hong Kong and Shanghai. Spanning six decades, three continents and five distinct cultures, Sabrina Mittermeier presents an interdisciplinary examination of the parks, situating them in their proper historical context and exploring the distinct cultural, social and economic landscapes that defined each one at the time of its construction. She then spotlights the central role of class in the subsequent success or failure of each venture. The first comparative study of the Disney theme parks, this book closes a significant gap in existing research and is an important new contribution to the field, providing the first discussion of the Disney

parks and what they reveal about the cultures they are set in. There has been a lack of focus on cross- and trans-cultural analyses of theme parks generally and Disney theme parks specifically, until now. It is also particularly interesting – and will be welcomed for it – for the non-United States context of the study. This is a thorough examination of all of the existing Disney Parks and how they function within their respective cultures. While Disney themes and characters attempt to be universal, the author does a good job of arguing for where this is not possible and how glocalization is crucial to the parks' successes. The writing is academic, but it is not inaccessible. It will have wide disciplinary appeal within academia, as tourism studies cross into a variety of fields including history, American studies, fandom studies, performance studies and cultural studies. It will be invaluable to those working in the field of theme park scholarship and the study of Disney theme parks, theme parks in general and related areas like world's expositions and spaces of the consumer and lifestyle worlds. It will also be of interest to Disney fans, those who have visited any of the parks or are interested to know more about the parks and their cultural situation and context.

UPDATED FOR 2020 WITH A NEW PREFACE BY NATE SILVER "One of the more momentous books of the decade." —The New York Times Book Review Nate Silver built an innovative system for predicting baseball performance, predicted the 2008 election within a hair 's breadth, and became a national sensation as a blogger—all by the time he was thirty. He solidified his standing as the nation's

---

foremost political forecaster with his near perfect prediction of the 2012 election. Silver is the founder and editor in chief of the website FiveThirtyEight. Drawing on his own groundbreaking work, Silver examines the world of prediction, investigating how we can distinguish a true signal from a universe of noisy data. Most predictions fail, often at great cost to society, because most of us have a poor understanding of probability and uncertainty. Both experts and laypeople mistake more confident predictions for more accurate ones. But overconfidence is often the reason for failure. If our appreciation of uncertainty improves, our predictions can get better too. This is the “ prediction paradox ” : The more humility we have about our ability to make predictions, the more successful we can be in planning for the future. In keeping with his own aim to seek truth from data, Silver visits the most successful forecasters in a range of areas, from hurricanes to baseball to global pandemics, from the poker table to the stock market, from Capitol Hill to the NBA. He explains and evaluates how these forecasters think and what bonds they share. What lies behind their success? Are they good—or just lucky? What patterns have they unraveled? And are their forecasts really right? He explores unanticipated commonalities and exposes unexpected juxtapositions. And sometimes, it is not so much how good a prediction is in an absolute sense that matters but how good it is relative to the competition. In other cases, prediction is still a very rudimentary—and dangerous—science. Silver observes that the most accurate forecasters tend to have a superior command of probability, and they tend to be both humble and hardworking. They distinguish the predictable from the unpredictable, and they notice a thousand little details that lead them closer to the truth. Because of their appreciation of probability, they can distinguish the signal from the noise. With everything from the health of the global economy to our ability to fight terrorism dependent on the quality of our predictions, Nate Silver ’ s

insights are an essential read.

For many years, laboratory dogs have served as important animal models for biomedical research that has advanced human health. Conducted at the request of the U.S. Department of Veterans Affairs (VA), this report assesses whether laboratory dogs are or will continue to be necessary for biomedical research related to the VA's mission. The report concludes that using laboratory dogs in research at the VA is scientifically necessary for only a few areas of current biomedical research. The report recommends that the VA adopt an expanded set of criteria for determining when it is scientifically necessary to use laboratory dogs in VA biomedical research; that the VA promote the development and use of alternatives to laboratory dogs; and highlights opportunities for the VA to enhance the welfare of laboratory dogs that are being used in biomedical research areas for which they have been deemed necessary.

From low humor to high drama, TV weather reporting has encompassed an enormous range of styles and approaches, triggering chuckles, infuriating the masses, and at times even saving lives. In *Weather on the Air*, meteorologist and science journalist Robert Henson covers it all—the people, technology, science, and show business that combine to deliver the weather to the public each day. Featuring the long-term drive to professionalize weathercasting; the complex relations between government and private forecasters; and the effects of climate-change science and the Internet on today's broadcasts. With dozens of photos and anecdotes illuminating the many forces that have shaped weather broadcasts over the years, this engaging study will be an invaluable tool for students of broadcast meteorology and mass communication and an entertaining read for anyone fascinated by the public face of weather.

An exploration of social movement media practices in an increasingly complex media ecology, through richly detailed cases of immigrant rights activism. For decades, social movements have vied for attention from the mainstream mass media—newspapers, radio, and television. Today, many argue that social media power social movements, from the Egyptian

revolution to Occupy Wall Street. Yet, as Sasha Costanza-Chock reports, community organizers know that social media enhance, rather than replace, face-to-face organizing. The revolution will be tweeted, but tweets alone do not the revolution make. In *Out of the Shadows, Into the Streets!* Costanza-Chock traces a much broader social movement media ecology. Through a richly detailed account of daily media practices in the immigrant rights movement, the book argues that there is a new paradigm of social movement media making: transmedia organizing. Despite the current spotlight on digital media, Costanza-Chock finds, social movement media practices tend to be cross-platform, participatory, and linked to action. Immigrant rights organizers leverage social media creatively, even as they create media ranging from posters and street theater to Spanish-language radio, print, and television. Drawing on extensive interviews, workshops, and media organizing projects, Costanza-Chock presents case studies of transmedia organizing in the immigrant rights movement over the last decade. Chapters focus on the historic mass protests against the anti-immigrant Sensenbrenner Bill; coverage of police brutality against peaceful activists; efforts to widen access to digital media tools and skills for low-wage immigrant workers; paths to participation in DREAM activism; and the implications of professionalism for transmedia organizing. These cases show us how savvy transmedia organizers work to strengthen movement identity, win political and economic victories, and transform public consciousness forever.

A deep dive into mid-century African American newspapers, exploring how Black pulp fiction reassembled genre formulas in the service of racial justice. In recent years, Jordan Peele's *Get Out*, Marvel's *Black Panther*, and HBO's *Watchmen* have been lauded for the innovative ways they repurpose genre conventions to criticize white supremacy, celebrate Black resistance, and imagine a more racially just world—important progressive messages widely spread precisely because they are packaged in popular genres. But it turns out, such generic retooling for antiracist purposes is nothing new. As Brooks E. Hefner's *Black Pulp* shows, this tradition of antiracist genre revision begins even earlier than recent studies of Black

---

superhero comics of the 1960s have revealed. Hefner traces it back to a phenomenon that began in the 1920s, to serialized (and sometimes syndicated) genre stories written by Black authors in Black newspapers with large circulations among middle- and working-class Black readers. From the pages of the Pittsburgh Courier and the Baltimore Afro-American, Hefner recovers a rich archive of African American genre fiction from the 1920s through the mid-1950s—spanning everything from romance, hero-adventure, and crime stories to westerns and science fiction. Reading these stories, Hefner explores how their authors deployed, critiqued, and reassembled genre formulas—and the pleasures they offer to readers—in the service of racial justice: to criticize Jim Crow segregation, racial capitalism, and the sexual exploitation of Black women; to imagine successful interracial romance and collective sociopolitical progress; and to cheer Black agency, even retributive violence in the face of white supremacy. These popular stories differ significantly from contemporaneous, now-canonized African American protest novels that tend to represent Jim Crow America as a deterministic machine and its Black inhabitants as doomed victims. Widely consumed but since forgotten, these genre stories—and Hefner’s incisive analysis of them—offer a more vibrant understanding of African American literary history.
