The Fine Art of the Motorcycle Engine

Amberley Publishing Limited

The MGB was a great British success story, a product largely conceived, designed and produced by a small team of dedicated people who genuinely cared about their work. Of course, the MGB came from a proud, successful sports car tradition, and the model it replaced - the revolutionary aerodynamic MGA - had been an unprecedented success - so the new car had big shoes to fill. Launching in 1962 and in production for eighteen years, the MGB became one of the most successful sports cars the world has ever known. This book describes how the MGB arose principally from the ideas of one man, MG's Chief Engineer, Syd Enever, how it was designed and developed, how it survived and thrived, and how it became the classic car still highly regarded today. There have been many previous books

about the MGB, and the related MGC and V8 variants, but MGB - The superlative MG reaches a new level of detail together seasoned with fresh insight. David Knowles has been researching and writing about the MGB for more than thirty years. Prepare to be surprised at some of the stories you will have never read before, and new twists on some you possibly thought you knew well.

Announced in 1955 to replace the TF the MGA was a radical change compared with the older cars. It had a streamlined and curvaceous full-width body. This was a car in need of extra performance and in 1958 the Twin-Cam came with a twin-overhead-camshaft, 1588cc version of the B-series engine. Like many other short run vehicles the Twin-Cam has attained cult status and is much sought after.

The cars to benefit from this development were the later 1600 and Mk II with larger engines and good performance. This is a book of contemporary road tests, new model introductions, specification and technical data, driver's reports, racing, record breaking, touring, buying second hand and history. Models covered include: 1489cc, CoupT, EX181, 1588cc Twin Cam, Peco Supercharged, 1600, 1600 MkII, MkII Competition.

The MGA truly marked a revolution in MG sports car design, with its appearance quite unlike any previous production car from the celebrated British marque. Entering production in the summer of 1955, it broke with the time-honoured tradition of narrow-gutted, flat-sides, upright styling, with the distinctive large grille, exposed headlamps, separate wings and sharply cut-off tail that had serviced the majority of MG sports cars for well over thirty years. Many die-hard MG enthusiasts of the time were understandably outraged, but the decision to break with tradition proved to be a good one: over 100,000 cars were produced over the model's seven-year lifetime. This book, from celebrated author David Knowles covers: the circumstances that led to the momentous decision to make such a fundamental design change; the production, publicity and evolution of each and every MGA variant from launch in 1955 to the end of production in 1962, with specification tables for

each model; profiles of the people who had crucial roles in the development of the MGA and finally, the largely untold story of overseas assembly in Australia, Ireland, Mexico and South Africa. It offers comprehensive coverage of racing and rallying in Europe, including the MGA entries at Sebring Twelve Hour race and where many of the cars ended up, and will be of great interest to all motoring enthusiasts and those particularly interested in MG. It is extensively illustrated with 200 colour and 300 black & white photographs, much of it drawn from archives and family collections, as well as photoshoots specially commissioned for this book. David Knowles has been researching and writing about British cars for over twenty-five years.

Honda performance enthusiasts all have one basic question when it comes to making their cars faster: "What parts work, and what parts don't?" The only way to answer that question is to install various parts on a car and test the power output on a dynamometer (dyno). Richard Holdener has done that in High Performance Honda Dyno Tests. Holdener's extensive testing provides dyno-proven data for all popular Honda performance parts, from air intake systems to exhausts, cams and cylinder heads to nitrous, turbos, and superchargers. There is even a chapter on engine build-ups. In addition, dyno tests on nearly every Honda model, from the single-cam DX to the 2.2L Prelude, are included. Acura models are covered as well, from the 1.8L LS through the GSR and Type R all the way up to exotic NSX. There is no better place to find performance answers than in this book.
