Kristin Hersh was a preternaturally bright teenager, starting university at fifteen and with her band, *Throwing Muses*, playing rock clubs she was too young to frequent. By the age of seventeen she was living in her car, unable to sleep for the torment of strange songs swimming around her head - the songs for which she is now known. But just as her band was taking off, Hersh was misdiagnosed with schizophrenia. *Paradoxical Undressing* chronicles the unraveling of a young woman's personality, culminating in a suicide attempt; and then her arduous yet inspiring recovery, her unplanned pregnancy at the age of 19, and the birth of her first son. Playful, vivid, and wonderfully warm, this is a visceral and brave memoir by a truly original performer, told in a truly original voice.

The geotechnical engineer needs to be aware of the advantages and

problems of different tests for sites with different geological conditions.

Interpreting the results of penetration tests is an essentially empirical

activity and as such the engineer is required to understand standard

equipment and procedures. This book provides crucial information about all

these considerations and is a valuable textbook of current theory and

practice.

Liquid Filtration is a state-of-the-art review of liquid filtration in the chemical process and allied industries. Interpretations of the phenomenological observations of the hydrodynamics of filtration are given in the hopes of establishing more theoretical and generalized bases of design methodology. Specific design and selection criteria are reviewed, and typical industrial problems and their solutions are presented. Nicholas Cheremisinoff is known internationally as one of the foremost engineers with Exxon and as the author of numerous books, articles and periodical contributions. Most recently his international consulting role has seen him active the Ukraine, part of the former Soviet Union, where the modernising of these industrial processes has been key. Liquid Filtration is a fundamental unit operation extensively practiced throughout the chemical process, petroleum, and allied industries. It involves the separation, removal, and collection of a discrete phase of matter existing in a dispersed or colloidal state in suspension. This separation is most often performed in the presence of a complex media structure in which physical, physiochemical and/or electrokinetic forces interact. New Methodological Approaches to Foreign Language Teaching Atlantic Books Ltd

This volume explores how the traditional academic disciplines of linguistics, translation, literature and cultural studies can contribute to, or be integrated into, the teaching of a foreign language by means of innovative methodologies, techniques and instruments. The book begins with a selection of essays on applied linguistics that share some significant findings in the context of second or foreign language acquisition. It then examines the ways in which linguistics, translation theory, literature and cultural studies are brought into the foreign language classroom not just as objects of study but also as vehicles for language-learning. By presenting studies on four main foreign languages, English, Spanish, French and German, the collection offers, to the foreign language profession, an opportunity for the sharing and comparison of strategies across languages at both the secondary and higher education level. The text is a valuable resource for language teachers with a more philologically-oriented background who would like to learn how to apply their research knowledge and experience to the design and implementation of new methodological approaches.

Key Features Build the skills to perform all networking tasks using Python with ease Use Python for network device automation, DevOps, and software-defined networking Get practical guidance to networking with Python Book Description This book begins with a review of the TCP/ IP protocol suite and a refresher of the core elements of the Python language. Next, you will start using Python and supported libraries to automate network tasks from the current major network vendors. We will look at automating traditional network devices based on the command-line interface, as well as newer devices with API support, with hands-on labs. We will then learn the concepts and practical use cases of the Ansible framework in order to achieve your network goals. We will then move on to using Python for DevOps, starting with using open source tools to test, secure, and analyze your network. Then, we will focus on network monitoring and visualization. We will learn how to retrieve network information using a polling mechanism, flow-based monitoring, and visualizing the data programmatically. Next, we will learn how to use the Python framework to build your own customized network web services. In the last module, you will use Python for SDN, where you will use a Python-based controller with OpenFlow in a hands-on lab to learn its concepts and applications. We will

compare and contrast OpenFlow, OpenStack, OpenDaylight, and NFV. Finally, you will use everything you ' ve learned in the book to construct a migration plan to go from a legacy to a scalable SDN-based network. What you will learn Review all the fundamentals of Python and the TCP/IP suite Use Python to execute commands when the device does not support the API or programmatic interaction with the device Implement automation techniques by integrating Python with Cisco, Juniper, and Arista eAPI Integrate Ansible using Python to control Cisco, Juniper, and Arista networks Achieve network security with Python Build Flask-based web-service APIs with Python Construct a Python-based migration plan from a legacy to scalable SDN-based network Who this book is for If you are a network engineer or a programmer who wants to use Python for networking, then this book is for you.
