The fun, comic-style format appeals to a wide range of students. Speech bubbles are used throughout to give hints and explanations while students are solving math

problems. Fractions, Book 1 teaches fractions as two-step problems (dividing by the bottom number and multiplying by the top number). Fraction circles, rulers, and counting exercises help students to progress in their understanding of number sense. This first volume includes material on equivalent fractions, fraction multiplication, converting mixed numbers to improper fractions (and vice versa), and simplifying fractions.

Concept quizzes are given throughout the book to test students' knowledge of the procedures involved in working with fractions. This series of books is designed to be

unique and to catch kids' attention in special ways: Tips and Tricks Students find tips and tricks not only helpful and memorable, but also interesting and motivating. Speech

Bubbles with Teacher Insights Speech bubbles are used to provide guidance, point out insights, or give helpful hints as students are solving math problems. Students learn

best by doing, and the instruction given in the speech bubbles is designed to (1)

sharpen students' powers of observation, (2) increase number sense, and (3) instruct in digestible chunks. Simplicity of Instruction Concepts are explained clearly and simply.

Every page (excluding review pages or quizzes) has a specific focus. Most pages have generous amounts of white space to keep students focused. Movement is from the

simple to the increasingly complex. Step-By-Step Procedures Students learn best when given explicit, step-by-step instruction. When several steps are involved, they are

numbered. This makes learning much more logical and memorable. Depth and

Complexity Throughout the book there are challenge problems to stretch students' thinking. At your discretion, you can guide students through the more challenging

problems (recommended) or, alternatively, you can have them skip these harder problems. Logical-Sequential Instruction Math problems are presented in a logical

sequence, so that previous problems contribute to students' abilities to solve future problems. The order in which math problems are presented plays an important role in

promoting number sense.
