Brilliant. Colorful. Visionary. Tenacious. Witty. Since his appointment to the Supreme Court in 1986, Associate Justice Antonin Scalia has been described as all of these things and for good reason. He is perhaps the best-known justice on the Supreme Court today and certainly the most controversial. Yet most Americans have probably not read even one of his several hundred Supreme Court opinions. In *Scalia Dissents*, Kevin Ring, former counsel to the U.S. Senate's Constitution Subcommittee, lets Justice Scalia speak for himself. This volume—the first of its kind—showcases the quotable justice's take on many of today's most contentious constitutional debates. *Scalia Dissents* contains over a dozen of the justice's most compelling and controversial opinions. Ring also provides helpful background on the opinions and a primer on Justice Scalia's judicial philosophy. *Scalia Dissents* is the perfect book for readers who love scintillating prose and penetrating insight on the most important constitutional issues of our time.

In this acclaimed memoir, Mezlekia recalls his boyhood in the arid city of Jijiga, Ethiopia, and his journey to manhood during the 1970s and 1980s. He traces his personal evolution from child to soldier--forced at the age of eighteen to join a guerrilla army. And he describes the hardships that consumed Ethiopia after the fall of Emperor Haile Selassie and the rise to power of the communist junta, in whose terror thousands of Ethiopians died. Part autobiography and part social history, *Notes from the Hyena's Belly* offers an unforgettable portrait of Ethiopia, and of Africa, during the defining and turbulent years of the last century.

This book addresses the biological processes relevant to the immune phenotypes of cancer and their significance for immune responsiveness, based on the premise that malignant cells manipulate their surroundings through an evolutionary process that is controlled by interactions with innate immune sensors as well as the adaptive recognition of self/non-self.

Checkpoint inhibitor therapy is now an accepted new form of cancer treatment. Other immuno-oncology approaches, such as adoptive cell therapy and metabolic inhibitors, have also shown promising results for specific indications. Immune resistance is common, however, limiting the efficacy of immunotherapy in many common cancer types. The reasons for such resistance are diverse and peculiar to the immune landscapes of individual cancers, and to the treatment modality used. Accordingly, approaches to circumvent resistance need to take into account context-specific genetic, biological and environmental factors that may affect the cancer immune cycle, and which can best be understood by studying the target tissue and correlated systemic immune markers. Understanding the major requirements for the evolutionary process governing human cancer growth in the immune-competent host will guide effective therapeutic choices that are tailored to the biology of individual cancers.

Its second chapter gives a summary of Hindu mathematics up to that point, and 200 years later, the Indian astronomer Bhaskara glossed that chapter. This volume is a literal English translation of Bhaskara's commentary complete with an introduction.
