Notes from the Hyena's Belly Simon and Schuster

Thomas Begay is found dead-drunk under the La Plata Bridge ...not unusual for Thomas Begay. What is unusual, is the beautiful BIA investigator Patsy Greyhorse, found lying beside him ...not drunk, or even a Navajo, but very dead nonetheless. Long time friend Charlie Yazzi, fresh from law school, risks his career ...and even his life to help his old schoolmate. The Answer seems to lie with the Yeenaaldiooshii ...should one choose to believe in such things. In the far reaches of the reservation there still are traditional Navajos living their lives with few concessions to modern mores. Guided by their strong sense of cultural heritage these outliers remain a strong anchor for the Navajo Nation. This story follows the lives of such people, caught up in a plot that could have far reaching implications for the entire tribe. "The depth of characters and culture transcends that generally seen in novels of the genre."

Astrophysics Processes Clarkson Potter

This book addresses the biological processes relevant to the immune phenotypes of cancer and their significance for immune responsiveness, based on the premise that malignant cells manipulate their surroundings through an evolutionary process that is controlled by interactions with innate immune sensors as well as the adaptive recognition of self/non-self. Checkpoint inhibitor therapy is now an accepted new form of cancer treatment. Other immuno-oncology approaches, such as adoptive cell therapy and metabolic inhibitors, have also shown promising results for specific indications. Immune resistance is common, however, limiting the efficacy of immunotherapy in many common cancer types. The reasons for such resistance are diverse and peculiar to the immune landscapes of individual cancers, and to the treatment modality used. Accordingly, approaches to circumvent resistance need to take into account context-specific genetic, biological and environmental factors that may affect the cancer immune cycle, and which can best be understood by studying the target tissue and correlated systemic immune markers. Understanding the major requirements for the evolutionary process governing human cancer growth in the immune-competent host will guide effective therapeutic choices that are tailored to the biology of individual cancers.
