*Using Examinations to Improve Education* Nelson Thornes  
The National Council for Higher Education (NCHE) and the Growth of the University Sub-sector in Uganda, 2002-2012, narrates the experience of the Ugandan NCHE in the establishment, development and regulation of higher education institutions in Uganda from 2002 to 2012. In this period, student numbers in higher education institutions increased from about 65,000 to some 200,000 and university institutions from about ten to more than triple the number. The book discusses the role of a regulatory agency in the delivery of higher education, the relations of universities and colleges with such an agency, its impact on developing university capacities, and leadership in creating and refining higher education ideas. The experience of Uganda's regulatory agency, the NCHE, in those ten years should help both the Ugandan and other African countries' higher education stakeholders in sharing lessons learned from this one case study. The author sees the roles of regulatory agencies as

vital in the initial stages of building a higher education sub-sector and in periods of system transitions such as the current journey from elite to mass systems but is of the view that the university remains the home of knowledge creation, dissemination, and its application in society.

Betrayal in the City, first published in 1976 and 1977, was Kenya's national entry to the Second World Black and African Festival of Arts and Culture in Lagos, Nigeria. The play is an incisive, thought-provoking examination of the problems of independence and freedom in post-colonial African states, where a sizeable number of people feel that their future is either blank or bleak. In the words of Mosese, one of the characters: "It was better while we waited. Now we have nothing to look forward to. We have killed our past and are busy killing our future." --Page 4 of cover.

The Art of Teaching Science emphasizes a humanistic, experiential, and constructivist approach to teaching and learning, and integrates a wide variety of pedagogical tools. Becoming a science teacher is a creative process, and this innovative textbook encourages students to construct ideas about science teaching through their interactions with peers, mentors, and instructors, and through hands-on, minds-on activities designed to foster a collaborative, thoughtful learning environment. This second edition retains key features such as inquiry-based activities and case studies throughout, while simultaneously adding new material on the impact of standardized testing on inquiry-based science, and explicit links to science teaching standards. Also included are expanded resources like a comprehensive website, a streamlined format and updated content, making the experiential tools in the book even more useful for both pre- and in-service science teachers. Special Features: Each chapter is organized into two sections: one that focuses on content and theme; and one that contains a variety of strategies for extending chapter concepts outside the classroom Case studies open each chapter to highlight real-world scenarios and to connect theory to teaching practice Contains 33 Inquiry Activities that provide opportunities to explore the dimensions of science teaching and increase professional expertise Problems and Extensions, On the Web Resources and Readings guide students to further critical investigation of important concepts and topics. An extensive companion website includes even more student and instructor resources, such as interviews with practicing science teachers, articles from the literature, chapter PowerPoint slides, syllabus helpers, additional case studies, activities, and more. ### Inquiry and Innovation in Middle School and High School

Pearson Education South Asia

"This should be required reading by every school administrator,

every teacher, every board member and all university faculty involved in the training of teachers. There is no doubt that we need to squeeze all blame, all coercion and all criticism out of any people-related business. Not until we realize that schools are in a people business will we ever be able to make meaningful changes." --Dr. Albert Mamary, former superintendent of schools, Johnson City, New York

### **School Science Practical Work in Africa** Hodder Education

How do schools protect young people and call on the youngest citizens to respond to violent conflict and division operating outside, and sometimes within, school walls? What kinds of curricular representations of conflict contribute to the construction of national identity, and what kinds of encounters challenge presumed boundaries between us and them? Through contemporary and historical case studies--drawn from Cambodia, Egypt, Northern Ireland, Peru, and Rwanda, among others--this collection explores how societies experiencing armed conflict and its aftermath imagine education as a space for forging collective identity, peace and stability, and national citizenship. In some contexts, the erasure of conflict and the homogenization of difference are central to shaping national identities and attitudes. In other cases, collective memory of conflict functions as a central organizing frame through which citizenship and national identity are (re)constructed, with embedded messages about who belongs and how social belonging is achieved. The essays in this volume

illuminate varied and complex inter-relationships between education, conflict, and national identity, while accounting for ways in which policymakers, teachers, youth, and community members replicate, resist, and transform conflict through everyday interactions in educational spaces.

Teaching Statistics in School Mathematics-Challenges for Teaching and Teacher Education results from the Joint ICMI/IASE Study Teaching Statistics in School Mathematics: Challenges for Teaching and Teacher Education. Oriented to analyse the teaching of statistics in school and to recommend improvements in the training of mathematics teachers to encourage success in preparing statistically literate students, the volume provides a picture of the current situation in both the teaching of school statistics and the pre-service education of mathematics teachers. A primary goal of Teaching Statistics in School Mathematics-Challenges for Teaching and Teacher Education is to describe the essential elements of statistics, teacher's professional knowledge and their learning experiences. Moreover, a research agenda that invites new research, while building from current knowledge, is developed. Recommendations about strategies and materials, available to train prospective teachers in university and in-service teachers who have not been adequately prepared, are also accessible to the reader.

#### **Biological Science** Arianne Richmond

Globalisation puts most governments under pressure to reduce the growth of public spending on education and to find other sources of income for the expected expansion of education systems. In conflict with this is the shift of economic production to knowledge-based intensive products and processes, meaning that the demand for higher education is rising worldwide. In addition, the need for more highly educated low cost labour tends to expand women's educational opportunities, especially in countries where there was resistance to equal access to education for them. Globalised information networks mean the transformation of world culture, but many groups feel marginalised by the market values of this new culture.

*G.C.E. 'O' level workbook, teacher's edition* New Biology for You In Taking the Path of Zen, Robert Aitken provided a concise guide to zazen (Zen meditation) and other aspects of the practice of Zen. In The Mind of Clover he addresses the world beyond the zazen

---

cushions, illuminating issues of appropriate personal and social action through an exploration of the philosophical complexities of Zen ethics. Aitken's approach is clear and sure as he shows how our minds can be as nurturing as clover, which enriches the soil and benefits the environment as it grows. The opening chapters discuss the Ten Grave Precepts of Zen, which, Aitken points out, are "not commandments etched in stone but expressions of inspiration written in something more fluid than water." Aitken approaches these precepts, the core of Zen ethics, from several perspectives, offering many layers of interpretation. Like ripples in a pond, the circles of his interpretation increasingly widen, and he expands his focus to confront corporate theft and oppression, the role of women in Zen and society, abortion, nuclear war, pollution of the environment, and other concerns. *The Mind of Clover* champions the cause of personal responsibility in modern society, encouraging nonviolent activism based on clear convictions. It is a guide that engages, that invites us to realize our own potential for confident and responsible action.
