This new textbook provides a comprehensive introduction to every aspect of the technology of low-rise construction. It includes sub-structure (site work, setting out and foundations) and superstructure (flooring, roofs, finishes, fittings and fixtures). The material here covers the first year course requirement of all courses on which construction technology is taught - no matter what the ultimate qualification. It offers tried and tested solutions to a range of construction problems and is organised following the sequence of construction. It will show what has been done in the past, demonstrating good practice - what works and what doesn't - and common faults. There are summaries of the more important BSI documents and reference to the latest building regulations. Lengthy explanations are avoided by relying heavily on hundreds of illustrations, pairing detail drawings with clear photographs to show real life construction situations. This is the 4th edition of the IET's Code of Practice for Inservice Inspection and Testing of Electrical Equipment. The book has been revised to take account of the PAT aspects of Professor Löfstedt's report and the HSE view that promotes a proportionate riskbased approach when assessing the safety of electrical equipment and appliances. This will help users, those responsible for the equipment and testers of the equipment to maintain safety. HSE encourages the adoption of this approach and the changes will also be reflected in the City & Guilds 2377 course. The Code of Practice enables duty holders to understand the requirements placed on them in law to maintain electrical equipment, using correct documentation, that falls under their control and to understand what inspection and testing involves. It also gives guidance to those carrying out inservice inspection and testing of electrical equipment (PAT).

### A Practical Guide to Interactive Brand Experiences Springer

"The time has come to define feminism; it is no longer possible to ignore it." The Century Magazine, 1914 In this landmark addition to scholarship, Nancy F. Cott, author of The Bonds of Womanhood, offers a new interpretation of American feminism during the early decades of this century--a period traditionally viewed as one in which women won the right to vote and then lost interest in feminist issues. Cott argues instead that his period was a time of crisis and transition from the nineteenth-century "woman movement" to the beginning of modern feminism. Many of the issues that are central to women today, says Cott, were firmly articulated in the early decades of this century. For example, the problem of defining sexual equality so as to recognize sexual difference between men and women, the ambiguous potential of a movement seeking individual freedoms for women by mobilizing sex solidarity, and the tensions involved in attaining full expression in work and love are all enduring elements of feminism seized upon by women of the 1910s and 1920s. First discussing how feminism was indebted to its predecessors, Cott shows that increasing heterogeneity and diverse loyalties among women in the early twentieth century contradicted the premise of the nineteenth-century "cause of woman" (the singular noun symbolizing the unity of the female sex). From this crisis emerged feminism, championing individual variability and refuting the premise that a singular "woman" existed. Cott focuses on the suffrage-campaign milieu in which feminism arose, giving particular attention to the character and role of the National Woman's Party from its militant suffrage days to its advocacy of the equal right amendment in the 1920s. Against prevailing interpretations of the decline of women's political activities after 1920, Cott counterposes the swelling numbers in women's voluntary associations and their political efforts. She also analyzes the pitfalls that awaited women who tried for effectiveness in the male-dominated political parties. She sets the controversy over the equal rights amendment in new context, discussing the full dimensions of the conflict as not merely over personalities, tactics, or class loyalties, but as a signal example of the modern problem of capturing sexual equality and sexual difference in law. The book explores the irony-strewn path of women who as aspiring professionals and political actors attempted to put into practice the feminist intent to replace the abstraction "woman" with, instead, "the human sex." This history--the story of women who first claimed the name feminists--builds an essential bridge between the presuffrage period and today.

The energy system is undergoing a fundamental transformation - from fossil to renewable energy, from central power plants to distributed, decentralised generation facilities such as rooftop solar panels or wind parks, from utilities to private residents as producers of energy, and from analogue to digital. This book looks at the energy transformation from two complementary angles: governance and business model innovation. On the one side, governance is a decisive factor for the success of the transformation because it can act as an accelerator, or it can delay the process. On the other side, entrepreneurs and corporate decision-makers provide new business models for a decentralised energy world. Based on best practices, country studies and interviews with CEOs and founders of startups from all over the world, the "Global Game Changer" suggests eight key principles for political decision-makers to successfully implement the transformation, and six core competencies for corporate decision-makers to thrive in the new marketplace.

The circular economy offer opportunities to reduce resource use and waste whilst providing business opportunities. This is also true in the mobile phone industry that has been characterised by high rates of product obsolescence. The emergence of the smart phone has changed the landscape, making repair, refurbishment and resell attractive to businesses and consumers. Moreover, emerging modular phone design should allow functional upgrades with low resource wastage. This report investigates the adoption of circular business models within Nordic markets. Producers, retailers, refurbishers, recyclers and resellers tell of their motivation, experiences and the challenges that they face. A special look is taken at consumer and waste law and the challenges and opportunities they represent. The report ends with 17 policy proposals that can accelerate the adoption of circularity in the sector.
