Late one afternoon in the fall of 1976, we were sipping Sanka and speculating on the possible directions towards which research and theory in organizational science might lead. One of us had just re-read Walter Nord's Marxist critique of Human Resource Management, and the discussion evolved into an enumeration of the many articles that had appeared in the recent literature attacking the discipline, its mission, and its methods. In no time the list was long enough to suggest that a number of scholars, both young and established, were dissatisfied with the rate of progress begun made in the accumulation of knowledge about organizations. The critics we identified were located at many different schools, and they were associated with diverse research traditions and biases. The causes they identified as underlying the problems they cited varied, as did the solutions they offered. We decided to pursue these polemics with a view to seeking commonalities among them, hoping that if there were any dominant common themes, it might be possible to anticipate the directions the field could take. Our reading and thinking led us to the conclusion that many of the issues being raised by the critics of the discipline could be seen as disagreements over some implicit (or ignored) metaphysical and epistemological assumptions about organizations. We hypothesized that much of the controversy resulted from a lack of consensus regarding what organizations are and how knowledge about them can be developed.

Studyguide for Research Methods for Business ABC-CLIO

This book introduces students with little or no background in applied research to a deeper understanding of the philosophies that underlie the methods researchers use to acquire, verify and validate information in applied research. It focuses on applied research as a service to a client with a problem that research can solve. It seeks to help students understand how they can apply research to their own businesses, or employ consultants to do the same in the knowledge that they can make informed decisions, emphasising the efficient use of research resources while trying to maximise the likelihood of providing a useful product. Applied Business Research is aimed at improving students' understanding of the practical application of both qualitative and quantitative research methods. It provides a detailed examination of the different methodologies available, such as interviews, focus groups and questionnaires and how to select and apply these different techniques. It explores the various analytical approaches, including both constant comparative analysis and statistics. Above all, it details the full research cycle, from the research catalyst and definition of research objectives to the management of the research project and the writing of the final report. The book emphasises a practical orientation, focusing on the development of research questions and the use of research methods for effective decision making in business. SPECIFIC TO AUSTRALIAN EDITION Retains the strong theoretical framework of Uma Sekaran's Research Methods for Business with regard to the full research cycle Emphasises both qualitative and quantitative research methods Guides students through the various processes in the nine stages in the research cycle Expands the discussion of other research methods, such as laboratory experimentation and case study analysis Includes new material on managing a research project, covering

issues such as topic analysis, client brief, guidelines for managing the process and putting together a proposal Offers broader coverage of the outcomes of the research, covering evaluating the implications of the findings, writing a research report and presenting results to different clients Contains examples of Australian and New Zealand research projects.
