Now in a comprehensively updated edition, this indispensable handbook analyzes how international humanitarian law has evolved in the face of these many new challenges.

Central concerns include the war on terror, new forms of armed conflict and humanitarian action, the emergence of international criminal justice, and the reshaping of fundamental rules and consensus in a multipolar world.

The Practical Guide to Humanitarian Law provides the precise meaning and content for over 200 terms such as terrorism, refugee, genocide, armed conflict, protection,

peacekeeping, torture, and private military companies—words that the media has introduced into everyday conversation, yet whose legal and political meanings are often obscure. The Guide definitively explains the terms, concepts, and rules of humanitarian law in accessible and reader-friendly alphabetical entries. Written from the perspective of victims and those who provide assistance to them, the Guide outlines the dangers, spells out the law, and points the way toward dealing with violations of the law. Entries are complemented by analysis of the decisions of relevant courts; detailed bibliographic references; addresses, phone numbers, and Internet links to the organizations presented; a thematic index; and an up-to-date list of the status of ratification of more than thirty international conventions and treaties concerning humanitarian law, human rights, refugee law, and international criminal law. This unprecedented work is an invaluable

reference for policy makers and opinion leaders, students, relief workers, and members of humanitarian organizations. Published in cooperation with Doctors Without Borders/Médecins Sans Frontières.

This well known text helps students understand the art of model building - what type of model to build, building the appropriate model, testing it statistically, and applying the model to practical problems in forecasting and analysis. Mahatma Jotirao Phooley U of Minnesota Press Moundbuilders of the Amazon shows that sophisticated archaeological, bioarchaeological, and geophysical techniques of remote sensing are fully applicable to tropical sites. Additionally, the comprehensive use of such techniques by all archaeologists, doing fieldwork anywhere, could revolutionize archaeology, allowing archaeologists to look inside sites rather than

simply excavate them.**Using a variety of remote sensing techniques, Roosevelt documents the existence of a major moundbuilding culture possessing monumental architecture and a rich artistic tradition on the lowland tropical floodplain of Marajo Island at the mouth of the Amazon River in Brazil, from about 400 A. D. to about 1,300 A. D.**Marajo Island at the mouth of the Amazon River is about the same size as Switzerland or Belgium. A well developed civilization existed there from about 400 A. D. to 1,300 A. D., comparable in many ways to the Inca civilization to the west or to the Aztec and Maya cultures to the north or, in some interesting ways, to the Pharonic cultures which developed at the mouth of the Nile. Because this civilization had no stone at its disposal, it expressed its monumental architecture in packed dirt which washed back into the alluvial floodplain long ago, effectively

preventing archaeological discovery until the recent development of sophisticated techniques of remote sensing and reconstruction. Key Features

- * Reports on the most extensive stratigraphic excavations ever of an ancient Amazonian civilization adapted to a floodplain environment
- * Introduces the first use of geophysics for archaeology in non-specialized language
- * Illustrates, for the first time, the elaborate art of a complex society that was indigenous to the tropical lowlands
- * Describes monumental sites, rich polychrome pottery, and the first extensive biological remains ever recovered in an Amazonian site
- * Proves that sophisticated archaeological, bioarchaeological, and geophysical techniques of remote sensing are fully applicable to tropical sites
- * Shows that the comprehensive use of such methods could revolutionize archaeology by allowing

archaeologists to look inside sites rather than simply excavate them

- * Provides examples which prove that the theories about the limitations of the tropical environment for cultural evolution are simply untrue and were based on faulty knowledge of the region and its archaeology

" 'A camera in the hand and ideas in the head' was the primary axiom of the young originators of Brazil's Cinema Novo. This movement of the 1960s and early 1970s overcame technical constraints and produced films on minimal budgets. In Allegories of Underdevelopment, Ismail Xavier examines a number of these films, arguing that they served to represent a nation undergoing a political and social transformation into modernity. Its best-known voice, filmmaker Glauber Rocha claimed that Cinema Novo was driven by an "aesthetics of hunger." This scarcity

of means demanded new cinematic approaches that eventually gave rise to a legitimate and unique Third World cinema. Xavier stands in the vanguard of scholars presenting and interpreting these revolutionary films - from the masterworks of Rocha to the groundbreaking experiments of Julio Bressane, Rog é rio Sganzerla, Andrea Tonacci and Arthur Omar - to an English-speaking audience. Focusing on each filmmaker's use of narrative allegories for the "conservative modernization" Brazil and other nations underwent in the 1960s and 1970s, Xavier asks questions relating to the connection between film and history. He examines the way Cinema Novo transformed Brazil's cultural memory and charts the controversial roles that Marginal Cinema and Tropicalism played in this process. Among the films he discusses are Black God, White Devil, Land in Anguish, Red Light Bandit, Macuna í ma, Ant ô nio das Mortes, The Angel Is Born, and Killed the Family and Went to the Movies." -- Book cover.

Imagine that the United States were to scrap all its income transfer programs—including Social Security, Medicare, and all forms of welfare—and give every American age twenty-one and older \$10,000 a year for life. This is the Plan, a radical new approach to social policy that defies any partisan label. First laid out by Charles Murray a decade ago, the updated edition reflects economic developments since that time. Murray, who previous books include *Losing Ground* and *The Bell Curve*, demonstrates that the Plan is financially feasible and the uses detailed

analysis to argue that many goals of the welfare state—elimination of poverty, comfortable retirement for everyone, universal access to healthcare—would be better served under the Plan than under the current system. Murray ' s goal, shared by Left and Right, is a society in which everyone, including the unluckiest among us, has the opportunity and means to construct a satisfying life. In *Our Hands* offers a rich and startling new way to think about how that goal might be achieved.

The biopharmaceutical industry has been a major driver of technological change in health care, producing unprecedented benefits for patients, cost challenges for payers, and profits for shareholders. As consumers and companies benefit from access to new drugs, policymakers around the globe seek mechanisms to control prices and expenditures commensurate with value. More recently the 1990s productivity boom of new products has turned into a productivity bust, with fewer and more modest innovations, and flat or declining revenues for innovative firms as generics replace their former blockbuster products. This timely volume examines the economics of the biopharmaceutical industry,

with eighteen chapters by leading academic health economists. Part one examines the economics of biopharmaceutical innovation including determinants of the costs and returns to new drug development; how capital markets finance R&D and how costs of financing the biopharmaceutical industry compare to financing costs for other industries; the effects of safety and efficacy regulation by the Food and Drug Administration (FDA) and of price and reimbursement regulation on incentives for innovation; and the role of patents and regulatory exclusivities. Part two examines the market for biopharmaceuticals with chapters on prices and reimbursement in the US, the EU, and other industrialized countries, and in developing countries. It looks at the optimal

design of insurance for drugs and the effects of cost sharing on spending and on health outcomes; how to measure the value of pharmaceuticals using pharmacoeconomics, including theory, practical challenges, and policy issues; how to measure pharmaceutical price growth over time and recent evidence; empirical evidence on the value of pharmaceuticals in terms of health outcomes; promotion of pharmaceuticals to physicians and consumers; the economics of vaccines; and a review of the evidence on effects of mergers, acquisitions and alliances. Each chapter summarizes the latest insights from theory and recent empirical evidence, and outlines important unanswered questions and areas for future research. Based on solid economics, it is nevertheless written in terms

accessible to the general reader. The book is thus recommended reading for academic economists and non-economists, and for those in industry and policy who wish to understand the economics of this fascinating industry.

In this study a model is proposed of the process of core formation in urban structure. The model sets out to explain: (a) Why and how a core is formed in the first place, (b) How the form and structure of the core change through time, and (c) What the relationships and interdependencies are between the core and the rest of urban structure. The thesis of the book is that authority relations provide meaningful complementary explanation for core formation in urban structure, together with the conventional

parameters of transport costs, land values, and the like. More particularly, the hypothesis holds that changes in patterns of authority are significant causes of changes in urban core structure.

In 1939 the influential architect Berthold Lubetkin abruptly left his thriving career in London and dropped out of sight, moving with his wife to a desolate farm in rural Gloucestershire. Life in the house the Lubetkins named “ World ’ s End was far from idyllic for their three children. Louise Kehoe and her siblings lived in an atmosphere of oppressive isolation, while their tyrannical father—at times charming and witty but usually a terrorist in a self-styled Stalinist hell—badgered and belittled them during his fits of self-loathing. Even his true identity remained an enigma. That secret was never divulged during her father ’ s lifetime, but Louise ’ s quest to unearth its origins—her relentless piecing together of the clues she found after his death—is a remarkable story, written with extraordinary grace, style, and

imagination, of an identity and a heritage lost and found.
