Contrary to what students, and society, are conditioned to think, obtaining a college degree does not automatically result in a job, let alone a dream career. In the last year, alone, half of college graduates are either jobless or underemployed in positions that don't fully use their skills and knowledge. Authors Tori Randolph Terhune, a gainfully-employed young college graduate herself, and Betsy A. Hays, a college professor, show readers what they can do in college to

successfully pave the way for future employment in Land Your Dream Career. The authors provide eleven easy-to-follow strategies for effectively using time on campus to start building a career. Terhune and Hays leads students through content designed to help students set themselves up for success, without focusing on grades or papers. The 11 steps include tips about how students can become experts in their fields, build their brand, get involved in and outside the classroom, allow for wiggle room,

follow the 75/25 rule (75% thinking, 25% doing) and use new media, such as social networking and blogging, to launch their career. Any student looking for that connection from college to getting to their dream career needs to read Land Your Dream Career. Terhune and Hays make it known that landing a good job is not impossible! *Jobs for which Junior College, Technical Institute, Or Other Specialized Training is Usually Required* Corwin Press

Too many people make important career and learning decisions with too little information. This book lets you choose a four-year college major and a career simultaneously, instead of considering just one or the other. Plus, it's very easy to use: Each major is presented on a concise, two-page spread for easy reading, and four worksheets result in a "hot list" of majors most likely to match your interests, skills, and career preferences. Land Your Dream Career
Just Publishing Psychology is one of the most popular college majors and can lead to a satisfying career in many different fields. If graduate school is not in your immediate plans, this book is for you. It will show you how to leverage your bachelors degree to

find a career with intellectual, emotional, and perhaps even financial rewards. In this book, 28 professionals describe the scope of their work, level of career satisfaction, and how their bachelors degree in psychology helped get them there. You also get a snapshot of salary, benefits, and day-to-day pleasures and challenges in a variety of

jobs as well as advice and questions to help you reflect on the classes, internships, experiences, and attitudes that will make you a success in your career of choice. In addition to the profiles, this book offers detailed instructions for how to use interest inventory and career search tools such as the Holland Self-Directed Search and O*NET database to

refine your post-college plans. It candidly reviews best and worst strategies for resume building, job searching, and interviewing and offers up-to-date tips on how to combine personal networking and technology to get noticed. As a bonus, author Eric Landrum provides a backstage pass to the research behind this book,

uncovering the process so you can appreciate the data or perhaps get some ideas for your next project. What Can You Do with a Major in Education?

University of Chicago Press

The most provocative business book of the year is the ultimate guide to having a great career and financial security -- even if you haven't graduated

with a college degree. With so much emphasis in society on the importance of finishing college, Real World Careers is filled with inspirational stories of people who skipped college or left early, launched successful careers and were able to accelerate their earnings potential. From

information technology to construction, blue collar to business startups, many jobs offer excellent pay and personal fulfillment and don't require a college degree. Written by an award-winning business journalist, this book also provides information on: the

vocational and trade schools that are a faster, more strategic road to landing work flexible and incentive-based careers that don't require a college degree the option of entrepreneurship overcoming preconceptions and much more. Choosing College Russell Sage Foundation In a society where everyone

is supposed to go to college, the problems facing high school graduates who do not continue their education are often forgotten. Many cannot find jobs, and those who do are often stuck in low-wage, dead-end positions. Meanwhile employers complain that high school graduates lack the necessary skills for today's workplace. Beyond College for All focuses on this crisis in the American labor market. Around the world, author James E.

Rosenbaum finds, employers view high school graduates as valuable workers. Why not here? Rosenbaum reports on new studies of the interaction between employers and high schools in the United States. He concludes that each fails to communicate its needs to the other, leading to a predictable array of problems for young people in the years after graduation. High schools caught up in the college-for-all myth, provide little job advice or preparation, leading students to make unrealistic plans and hampering both students who do not go to college and those who start college but do not finish. Employers say they care about academic skills, but then do not consider grades when deciding whom to hire. Faced with few incentives to achieve, many students lapse into precisely the kinds of habits employers deplore, doing as little as possible in high school and developing poor attitudes. Rosenbaum contrasts the situation in the United States with that of two other industrialized nations—Japan and Germany—which have formal systems for aiding young people who are looking for employment. Virtually all Japanese high school graduates obtain work, and in Germany, eighteen-year-olds routinely hold responsible jobs. While the American system lacks such

This updated guide helps students make the most out of their field of study and their career. Great Jobs for English Majors University of Pennsylvania Press What can you do with a degree in math? This book

addresses this question with 125 career profiles written by people with degrees and backgrounds in mathematics. With job titles ranging from sports analyst to science writer to inventory specialist to CEO, the volume provides ample evidence that one really can

do nearly anything with a degree in mathematics. These professional s share how their mathematical education shaped their career choices and how mathematics, or the skills acquired in a mathematics education, is used in their daily work. The degrees earned by the authors

profiled here will all find are a good mix of bachelors, masters, and PhDs. With 114 completely new profiles since the third edition, the careers featured within accurately reflect current trends in the job market. College mathematics faculty, high school teachers, and career counselors

this a useful resource. Career centers, mathematics departments, and student lounges should have a copy available for student browsing. In addition to the career profiles, the volume contains essays from career counseling professionals on the topics of job-searching, interviewing

, and applying to graduate school. *Preparing Today's Students for Tomorrow's Jobs in Metropolitan America* CQ Press The Chicago Guide to Landing a Job in Academic Biology is an indispensable guide for graduate students and post-docs as they enter that domain red in tooth and claw: the job market. An academic career in the biological

sciences typically demands well over a decade of technical training. So it's ironic that when a scholar reaches the most critical stage in that career—the search for a job following graduate work—he or she receives little or no formal preparation. Instead, students are thrown into the job market with only cursory guidance on how to search for and land

a position. Now there's help. Carefully, clearly, and with a welcome sense of humor, *The Chicago Guide to Landing a Job in Academic Biology* leads graduate students and postdoctoral fellows through the perils and rewards of their first job search. The authors—who collectively have for decades mentored students and served on

hiring committees have honed their advice in workshops at biology meetings across the country. The resulting guide covers everything from how to pack an overnight bag without wrinkling a suit to selecting the right job to apply for in the first place. The authors have taken care to make their advice useful to all areas of academic biology—from cell biology and molecular genetics to evolution and ecology—and they give tips on how applicants can tailor their approaches to different institutions from major research universities to small private colleges. With jobs in the sciences ever more difficult to come by, *The Chicago Guide to Landing a Job in Academic Biology* is designed to help students and post-docs navigate the tricky terrain of an academic job search—from the first year of a graduate program to the final negotiations of a job offer.

Great Jobs for History Majors
Taylor & Francis
Landing a job in today's academic job market is no easy feat. Is graduate school the answer? This informed and candid book provides anyone

thinking about pursuing an advanced degree—and those who support them—with the inside scoop on what to expect in graduate school. Amanda I. Seligman helps potential students navigate graduate study—not just how to get in but how to succeed once you are there and what to expect when you leave. She weighs the pros and cons of attending graduate school against achieving a sustainable work-life balance and explains the application process, the culture of graduate school, and employment prospects for academics. This book guides readers through the ins and outs of graduate school, and no topic is off limits, including ? qualifications and admission guidelines? financial aid and graduate stipends? meeting expectations and residency requirements? coursework, theses, and dissertations? degrees, jobs, and academic careers? tenure, research, and peer review? social life (will you still have one?) Written in a question-and-answer format, *Is Graduate School Really for You?* eliminates the guesswork. Whether you are considering applying to graduate school, already enrolled, or would simply like to know more about continuing your education, this is the book for you.

progress individual students are trying to make. They don't give students and families the information and context they need to make such a high-stakes decision about whether and where to get an education. Choosing College strips away the noise to help you understand why you're going to school. What's driving you? What are you

trying to accomplish? Once you know why, the book will help you make better choices. The research in this book illustrates that choosing a school is complicated. By constructing more than 200 mini-documentaries of how students chose different postsecondary educational experiences, the authors explore the motivations for how and why people

make the decisions that they do at a much deeper, causal level. By the end, you'll know why you're going and what you're really chasing.
