The history of financial assistance to students in high schools, colleges, and universities in this country underlies what the authors of this book see as a changing educational philosophy. From the founding of Harvard College in 1636, and its effort to provide employment for needy students, to money allocations made to land-grant colleges after the Civil War, and to the recent federal enactments, it is clear that there has been a shift from the concept of financial aid for only needy students to the concept of work-study programs as an integral part of the total educational process. This view is supported by the fact of current large federal appropriations for the development of such programs and by the fact that co-operative work-study programs have become a part of academic planning. A measure of the importance of this study may be derived from these figures: of the 7.6 million students in American universities and colleges at the present time, one in four participates in federally-financed aid programs; of the 2,242 million dollars in student aid granted in 1967, 70 percent came from the federal government in the form of work-study programs, outright grants, loans, and scholarships; and in large universities, from one-fourth to one-half of all students receive some sort of financial assistance. An important part of this work are the descriptions of work-study programs in operation in various universities and colleges. In addition, the authors' conclusions and recommendations for structuring work-study programs will be valuable to administrators, counselors, and educators in general.

There are many reasons for pursuing a higher education. For most persons, a significant, maybe even the dominant reason, for going to college is that it supposedly will improve

one's prospect of acquiring a good job. In a sense, a college degree has long been considered a ticket to the middle class--an adult life with a good income and relatively high job security. From the standpoint of society, efforts to expand college graduation attainment rates have been justified by President Obama and major foundations (for example, Lumina and Gates) on a need to be competitive with other nations which have a larger proportion of adults with college degrees. This study argues that the conventional wisdom that going to college is a "human capital investment" with a high payoff is increasingly wrong. Evidence shows that currently more than one-third of college graduates hold jobs that governmental employment experts say would require less than a college degree. Moreover, the push to increase enrollments has led to a majority of the "increment" of the stock of college graduates finding employment in relatively low skilled jobs, most of which are not particularly high paying (although there are exceptions). If the public objective is to use higher education as a means to form human capital and expand national productive capabilities, it appears much of the recent "investment" in colleges is misdirected. The bottom line is that there is a need to rethink higher education policies, particularly the massive one-size-fits-all federal financial assistance programs but also other public provision of higher education services. The world of work has changed. People in previous generations tended to pick one professional path and stick to it. Switching companies every few years wasn't the norm, and changing careers was even rarer. Today's career trajectories aren't so scripted and linear. Technology has given rise to new positions that never before existed, which means we are choosing from a much broader set of career options—and have even more opportunities to find work that lights us up. However, we don't discover and apply for jobs the same way anymore, and employers don't find applicants the way they used to. Isn't it about time we had a playbook for navigating it all? Kathryn Minshew and Alexandra Cavoulacos, founders of the popular career website TheMuse, offer the definitive guide to the modern workplace. Through quick exercises and structured tips, you will learn:

- The New Rules for finding the right path: Sift through, and narrow today's ever-growing menu of job and career options, using the simple step-by-step Muse Method.
- The New Rules for landing the perfect job: Build your personal brand, and communicate exactly how you can contribute and why your experience is valuable in a way that is sure to get the attention of your dream employer. Then ace every step of the interview process, from getting a foot in the door to negotiating your offer.
- The New Rules for growing and advancing in your career: Mastering first impressions, the art of communication, networking, managing up and other "soft" skills – and make it obvious that whatever level you're at, you're ready to get ahead. Whether you are starting out in your career, looking to advance, navigating a mid-career shift, or anywhere in

between, this is the book you need to thrive in the New World of Work.

How Psychology Works Routledge

Education, long the key to opportunity in the United States, has become simply essential to earning a decent living. By 2018, 63 percent of all jobs will require at least some postsecondary education or training. Teachers and civic leaders stress the value of study through high school and beyond, but to an alarmingly large segment of America's population—including a disproportionate number of ethnic and racial minorities—higher education seems neither obtainable nor relevant. *Preparing Today's Students for Tomorrow's Jobs in Metropolitan America*, edited by Laura W. Perna, offers useful insights into how to bridge these gaps and provide urban workers with the educational qualifications and skills they need for real-world jobs. *Preparing Today's Students for Tomorrow's Jobs in Metropolitan America* probes more deeply than recent reports on the misalignment between workers' training and employers' requirements. Written by researchers in education and urban policy, this volume takes a comprehensive approach. It informs our understanding of the measurement and definition of the learning required by employers. It examines the roles that different educational sectors and providers play in workforce readiness. It analyzes the institutional practices and public policies that promote the educational preparation of today's students for tomorrow's jobs. The volume also sheds light on several recurring questions, such as what is the "right" amount of education, and what should be the relative emphasis on "general" versus "specific" or "occupational" education and training? Ensuring that today's students have the education and training to meet future career demands is critical to the economic and social well-being of individuals, cities, and the nation as a whole. With recommendations for institutional leaders and public policymakers, as well as future research, this volume takes important steps toward realizing this goal.

Clinical psychology is a quickly growing profession, yet it is a challenging one: the preparation is arduous, the training is highly selective, and the results - an established and financially successful practice - are not easy to achieve. This book explains how to prepare for and surmount all of the hurdles presented to those who hope to eventually develop a lucrative and rewarding practice in clinical psychology. It is the first of its kind to focus primarily on financial success, though it does also look at the personal stresses and rewards of the profession. The author provides tips from his own experience and from other financially successful private practice psychologists and offers business techniques and pointers that are not explained in training programs. Undergraduate students contemplating a career in psychology will find advice on preparing for the GRE, applying to graduate schools, and getting involved in research and clinical work. For graduate students, an overview of a graduate clinical psychology program, preparing and completing a dissertation, and gaining experience in psychological testing are provided. Chapters then focus on how to build and manage a private practice, the best ways to manage personal and business finances, and how to practice good self-care. Additionally, the book includes a chapter by an expert on student-loan repayment that examines how to best work through the process of paying back student loans while building a practice.

*Careers and the Study of Political Science* Little, Brown

In a tech-dominated world, the most needed degrees are the most surprising:

the liberal arts Did you take the right classes in college? Will your major help you get the right job offers? For more than a decade, the national spotlight has focused on science and engineering as the only reliable choice for finding a successful post-grad career. Our destinies have been reduced to a caricature: learn to write computer code or end up behind a counter, pouring coffee. Quietly, though, a different path to success has been taking shape. In *YOU CAN DO ANYTHING*, George Anders explains the remarkable power of a liberal arts education - and the ways it can open the door to thousands of cutting-edge jobs every week. The key insight: curiosity, creativity, and empathy aren't unruly traits that must be reined in. You can be yourself, as an English major, and thrive in sales. You can segue from anthropology into the booming new field of user research; from classics into management consulting, and from philosophy into high-stakes investing. At any stage of your career, you can bring a humanist's grace to our rapidly evolving high-tech future. And if you know how to attack the job market, your opportunities will be vast. In this book, you will learn why resume-writing is fading in importance and why "telling your story" is taking its place. You will learn how to create jobs that don't exist yet, and to translate your campus achievements into a new style of expression that will make employers' eyes light up. You will discover why people who start in eccentric first jobs - and then make their own luck - so often race ahead of peers whose post-college hunt focuses only on security and starting pay. You will be ready for anything.

Cut through the noise and make better college and career choices This book is about addressing the college-choosing problem. The rankings, metrics, analytics, college visits, and advice that we use today to help us make these decisions are out of step with the progress individual students are trying to make. They don't give students and

families the information and context they need to make such a high-stakes decision about whether and where to get an education. Choosing College strips away the noise to help you understand why you're going to school. What's driving you? What are you trying to accomplish? Once you know why, the book will help you make better choices. The research in this book illustrates that choosing a school is complicated. By constructing more than 200 mini-documentaries of how students chose different postsecondary educational experiences, the authors explore the motivations for how and why people make the decisions that they do at a much deeper, causal level. By the end, you'll know why you're going and what you're really chasing. The book: Identifies the five different Jobs for which students hire postsecondary education Allows you to see your true options for what's next Offers guidance for how to successfully choose your pathway Illuminates how colleges and entrepreneurs can build better experiences for each Job The authors help readers understand not what job students want out of college, but what "Job" students are hiring college to do for them.

Careers and the Study of Political Science Currency  
This research, undertaken between 2004 and 2010, examines the progress of a single cohort of students on an undergraduate degree - the B.A. Educational Studies - at the University of Hull. It investigates their entry profiles, their progress on the degree and the impact their studies have had on their postgraduate lives. The research has been informed by a range of literature, most notably that of Archer et al. (2003), Thomas (2001), Wolf (2002) and Connor et al. (2006), in its examination of the policy and values underpinning education as a force for economic growth; widening participation; the impact of family background in relation to education; and the links between vocational and academic entry routes to higher education. The research has been set within a series of policy and value

contexts, moving from the global to the national and finally to the local. The research combines quantitative and qualitative methods to investigate an overarching research question: How does the performance and experience of students on a B.A. Educational Studies degree relate to their prior qualifications and background? This has been done through an examination of seven key sub-questions: 1. What kinds of students are enrolled for an Educational Studies degree at the University of Hull? 2. Why do students apply to do an Educational Studies degree at the University of Hull? 3. Whom do Hull University admissions staff admit to an Educational Studies degree? 4. How do these students perform on the degree? 5. Do students with different entry profiles perform differently on the degree? 6. What are the students' eventual ambitions? Do these change, or stay the same? If they change, what leads to this? 7. How beneficial have the students' pre-university experiences been in preparing them for undergraduate study, postgraduate study/work? The outcome of the research shows that the students are predominantly young and female, living in or near to Hull. Applicants from traditional academic entry routes were accepted with a wider range of UCAS points than students from vocational entry routes, but both groups fared equally well on the degree, whatever the nature of their pre-entry qualifications or whichever subjects they studied beforehand. Mature students, in general, had higher achievement rates on the degree than younger students. In their early postgraduate lives, the students themselves perceived their pre-entry qualifications as having provided little benefit in preparing them for their undergraduate studies, but those with vocational qualifications had found these useful in their postgraduate studies and working lives. Later interviews suggested that these perceptions began to change once the former students were settled in careers. From the research, it emerges that - outwith the nature of students' entry qualifications - family background and teacher expectations have importance in determining the students' reasons for entering higher education. In addition, one of the most significant factors in their successfully gaining graduate jobs appears to have been students' access to work experience both before coming to university and during their time as undergraduates. The sample interviewed three years after graduation was able to reflect on their degree studies as having been a positive and personally fulfilling experience, a finding that relates to key literature underpinning the research.

The steady job growth and falling unemployment rate offer some reassurance that the economy is on the right track. Yet, the long-term structural changes accelerated by the cyclical impact of the Great Recession have resulted in a very unequal recovery. During the recession, the worst economic downturn since the Great Depression, workers without postsecondary education suffered tremendous job losses. The recovery has been virtually nonexistent for less-educated workers. Men without a college degree were traditionally able to make their way into the middle class through manufacturing and construction jobs, and women without a college degree could get middle class jobs in office and administrative support occupations. These pathways are increasingly closing down, leaving few opportunities to access the middle class without postsecondary education. By contrast, for most workers with a Bachelor's degree or higher, the recovery has resulted in a strong job market. These recent economic trends have made it clearer than ever that a college degree continues to be the most important economic asset for those who want to succeed in the labor market. The economy is seeing a continuing scouring out of low-skill jobs in favor of high-skill jobs. This makes the acquisition of postsecondary education an essential prerequisite to participate in the 21st century labor market. Workers with a high school diploma or less must attain postsecondary credentials if they want to compete effectively in growing high-skill career fields. The nation must face up to a need to train more of its workers for the growing high-skill jobs that play an increasingly central role in the post-Great Recession economy. A section on "Data Sources and Methodology" is found in the appendix.

Medicaid is the single largest public health insurer in the United States, covering upwards of 70 million Americans. Crucially, Medicaid is also an intergovernmental program that yokes poverty to federalism: the federal government determines its broad contours, while states have tremendous discretion over how Medicaid is designed and implemented. Where some locales are generous and open handed, others are tight-fisted and punitive. In *Fragmented Democracy*, Jamila Michener demonstrates the consequences of such disparities for democratic citizenship. Unpacking how federalism transforms Medicaid beneficiaries' interpretations of government and structures their participation in politics, the book examines American democracy from the vantage point(s) of those who are living in or near poverty, (disproportionately) Black or Latino, and reliant on a federated government for vital resources.

Psychology is one of the most popular college majors and can lead to a satisfying career in many different fields. If graduate school is not in your immediate plans, this book is for you. It will show you how to leverage your bachelors degree to find a career with intellectual, emotional, and perhaps even financial rewards. In this book, 28 professionals describe the scope of their work, level of career satisfaction, and how their bachelors degree in psychology helped get them there. You also get a snapshot of salary, benefits, and day-to-day pleasures and challenges in a variety of jobs as well as advice and questions to help you reflect on the classes, internships, experiences, and attitudes that will make you a success in your career of choice. In addition to the profiles, this book offers detailed instructions for how to use interest inventory and career search tools such as the Holland Self-Directed Search and O\*NET database to refine your post-college plans. It candidly reviews best and worst strategies for resume building, job searching, and interviewing and offers up-to-date tips on how to combine personal networking and technology to get noticed. As a bonus, author Eric Landrum provides a backstage pass to the research behind this book, uncovering the process so you can appreciate the data or perhaps get some ideas for your next project.
