The International Textbook of Diabetes Mellitus has been a successful, well-respected medical textbook for almost 20 years, over 3 editions. Encyclopaedic and international in scope, the textbook covers all aspects of diabetes ensuring a truly multidisciplinary and global approach. Sections covered include epidemiology, diagnosis, pathogenesis, management and complications of diabetes and public health issues worldwide. It incorporates a vast amount of new data regarding the scientific understanding and clinical management of this disease, with each new edition always reflecting the substantial advances in the field. Whereas other diabetes textbooks are primarily clinical with less focus on the basic science behind diabetes, ITDM's primary philosophy has always been to comprehensively cover the basic science of metabolism, linking this closely to the pathophysiology and clinical aspects

of the disease. Edited by four world-famous diabetes specialists, the book is divided into 13 sections, each section edited by a section editor of major international prominence. As well as covering all aspects of diabetes, from epidemiology and pathophysiology to the management of the condition and the complications that arise, this fourth edition also includes two new sections on NAFLD, NASH and non-traditional associations with diabetes, and clinical trial evidence in diabetes. This fourth edition of an internationally recognised textbook will once again provide all those involved in diabetes research and development, as well as diabetes specialists with the most comprehensive scientific reference book on diabetes available.

This Handbook fulfils a pressing need within the area of psychological measurement in diabetes research and practice by providing access to

---

material which has either been widely dispersed through the psychological and medical literature or has not previously been published. Journal articles describing the psychometric development of scales have rarely included the scales themselves but this book includes copies of scales and a wealth of additional information from unpublished theses, reports and recent manuscripts. You will find information about the reliability, validity, scoring, norms, and use of the measures in previous research presented in one volume. The Handbook is designed to help researchers and clinicians:

- To select scales suitable for their purposes
- To administer and score the scales correctly
- To interpret the results appropriately.

Dr. Clare Bradley is Reader in Health Psychology and Director of the Diabetes Research Group at Royal Holloway, University of London. Dr. Bradley and her research group have designed, developed and used a wide variety of measures of psychological processes and outcomes. Many of these measures have been designed and developed specifically for people with diabetes. Together with diabetes-specific psychological measures developed by other researchers internationally, these instruments have played an important part in facilitating patient-centred approaches to diabetes research and clinical practice.

Babies of women with diabetes are nearly five times more likely to be stillborn and almost three times more likely to die in the first three months. The incidence of gestational diabetes mellitus in the U.S. is high—between 3 and 7 percent—and rising. The condition is often

---

complicated by other risk factors such as obesity and heart disease. The Textbook of Diabetes and Pregnancy presents a comprehensive review of the science, clinical management, and medical implications of gestational diabetes mellitus, a condition with serious consequences that is on the increase in all developed societies. This new edition supports the latest initiatives and strategies of the International Federation of Gynecology and Obstetrics (FIGO) and adds chapters on noncommunicable diseases, obesity, bariatric surgery, and epidemiology outside Western cultures. Written by a cadre of experts, the book provides a comprehensive, authoritative, and international view of gestational diabetes mellitus and will be invaluable to maternal-fetal medicine specialists, diabetologists,

neonatologists, and a growing number of gynecologists and general physicians concerned with the management of noncommunicable diseases in pregnancy.
