The Centre for Genetics Education provides information about many of the inheritance patterns outlined above: Autosomal dominant inheritance. Autosomal recessive inheritance. X-linked dominant inheritance. X-linked recessive inheritance. Mitochondrial inheritance. EuroGentest also offers explanations of Mendelian inheritance patterns:

Patterns of Inheritance. The phenotype of an individual is determined by his or her genotype. The genotype is determined by alleles that are received from the individual's parents (one from Mom and one from Dad). These alleles control if a trait is " dominant " or " recessive ". Additionally, the location of the alleles in the genome determine if a trait is " autosomal " or " X-linked ".
