Harness the power of whole-plant foods to lead a long

and vibrant life—whether you ’ re vegan, vegetarian or omnivorous. Eat more whole plants. This simple recommendation is at the heart of a building consensus: The healthiest diet is a plant-based diet. Plants have spent millions of years evolving their defenses against disease. Now, studies indicate that by eating whole, minimally processed plant foods, humans too can

gain protection—against everyday illness, diabetes, obesity, depression, mental decline, heart disease, and even cancer. In *The Plant-Powered Diet*, registered dietitian Sharon Palmer marshals the most up-to-date findings in nutrition to explain both why you should fill more of your plate with whole-plant foods and how to do so, whether you're a longtime vegan or a committed omnivore. Here is:

- Essential information on the healthiest plant foods—whole grains, vegetables, fruits, nuts, legumes, and even herbs, spices, chocolate, coffee, tea, and wine
- Advice for navigating the supermarket, kitchen, restaurant menus, on-the-go meals, exercise, and more
- A 14-day meal plan, plus daily action alerts to get you started
- And 75

original plant-based recipes for every meal—all with complete nutritional data. *The Plant-Powered Diet* is not a diet you'll go "on" today and "off" tomorrow. It is a simple, satisfying, and thoroughly delicious way of eating that can not only last your lifetime—but lengthen it. Education, Identity, and Conflict Eye On Education

Over the past two

decades, projects supported by the International Development Research Centre (IDRC) have critically examined the ways in which information and communications technologies (ICTs) can be used to improve learning, empower the disenfranchised, generate income opportunities for the poor, and facilitate access to healthcare in Africa, Asia, Latin America and the Caribbean. Considering that most development institutions and governments are currently attempting to integrate ICTs into their practices, it is an opportune time to reflect on the research findings that have emerged from IDRC's work and research in this area. "Connecting ICTs to

Development" discusses programmatic investments made by IDRC in a wide variety of areas related to ICTs, including infrastructure, access, regulations, health, governance, education, livelihoods, social inclusion, technical innovation, intellectual property rights and evaluation. Each chapter in this book analyzes the ways in which research findings from IDRC-supported projects have contributed to an evolution of thinking, and discusses successes and challenges in using ICTs as tools to address development issues. The volume also presents key lessons learned from ICT4D programming and recommendations for future work.

Years of human ignorance has diminished our natural resources and aged our planet. Now, people are making an effort to change the way they are treating the planet. Being more environmentally conscious about the impact materials used for fashion have on our planet is one-way designers can reduce waste and help enable a better world. By going eco-friendly can be less harmful to our natural resources. Not all fashion is following this eco-friendly trend, but more designers are embracing

the trend toward eco-fashion than ever before. If the entire fashion industry became eco-friendly, it would make a huge difference for future generations because the fashion industry employs over a billion people globally. There is need for eco-friendly wet processing that is sustainable and beneficial methods. Number of sustainable practices has been implemented by various textile processing industries such as Eco-friendly bleaching; Peroxide bleaching; Eco-friendly dyeing and Printing; Low impact dyes; Natural dyes; Azo Free dyes; Phthalates Free Printing. There are a variety of materials considered "environmentally-friendly"

for a variety of reasons. The industry is desperately in the need of newer and very efficient dyeing/finishing and functional treatments of textiles. There is growing awareness and readiness to adapt new perspective on industrial upgradation of Cleaner Production Programme, such new technologies help enterprises achieve green production and cost reduction at the same time. Green Production has become necessary for enterprises under the upgrade and transformation policy. The book *Eco-Friendly Textile Dyeing and Finishing* covers topics in the area of sustainable practices in textile dyeing and finishing. *Towards Harmonization*

In *Taking the Path of Zen*,
Robert Aitken provided a
concise guide to zazen
(Zen meditation) and other
aspects of the practice of
Zen. In *The Mind of Clover*
he addresses the world
beyond the zazen cushions,
illuminating issues of
appropriate personal and
social action through an
exploration of the
philosophical complexities
of Zen ethics. Aitken's
approach is clear and sure

as he shows how our minds
can be as nurturing as
clover, which enriches the
soil and benefits the
environment as it grows.
The opening chapters
discuss the Ten Grave
Precepts of Zen, which,
Aitken points out, are "not
commandments etched in
stone but expressions of
inspiration written in
something more fluid than
water." Aitken approaches
these precepts, the core of
Zen ethics, from several
perspectives, offering many
layers of interpretation. Like

of his interpretation
increasingly widen, and he
expands his focus to
confront corporate theft and
oppression, the role of
women in Zen and society,
abortion, nuclear war,
pollution of the environment,
and other concerns. *The
Mind of Clover* champions
the cause of personal

responsibility in modern society, encouraging nonviolent activism based on clear convictions. It is a guide that engages, that invites us to realize our own potential for confident and responsible action.

Each topic is treated from the beginning, without assuming prior knowledge. Each chapter starts with an opening section covering an application. These help students to understand the relevance of the topic: they are motivational and they make the text more accessible to the majority of students. Concept Maps have been added, which together with

Summaries throughout, aid understanding of main ideas and connections between topics. Margin points highlight key points, making the text more accessible for learning and revision. Checkpoints in each chapter test students' understanding and support their private study. A selection of questions are included at the end of each chapter, many from past examination papers. Suggested answers are provided in the Answers Key.

High-stakes public examinations exert a dominant influence in most education systems. They affect both teacher and student behavior, especially at the middle and upper levels of secondary education. The content of past examinations tends to dictate what is taught and how it is taught and, more important, what is learned and how it is learned. By changing aspects of these examinations, especially their content and format, education systems can have a strong positive impact on teacher behavior and student learning, help raise student achievement levels, and better prepare students for tertiary-level education and for employment. Examination agencies, many of which have followed the same

procedures over decades, can learn from the successes and failures of other systems. This book addresses current issues related to the development, administration, scoring, and usage of these high-stakes public examinations, identifying key issues and problems related to examinations in many emerging market economies as well as in advanced economies. The book's primary audience consists of public examination officials on national, regional, and state examination boards, but the book should also be of interest to senior education policy makers concerned with certification and learning achievement standards, to academics and researchers interested in educational assessment, to governmental and education agencies responsible for student selection, and to professionals at development organizations. "This extremely well-written and comprehensive book offers a timely review of the diversity of public examination practices worldwide; of the tensions between examinations and learning; and of the technical expertise involved in the creation of valid, reliable, and fair assessments. It reminds us that as "the diploma disease†? takes hold with an ever-greater intensity at every stage of education worldwide, and the commercial business of testing flourishes, those concerned with educational quality and meaningful learning must be on guard to prevent the assessment tail wagging the educational dog.†? Angela W. Little, Professor Emerita, Institute

of Education, University College London “This book is very well structured and written and draws on the authors’ remarkable global knowledge across countries and histories. It will be a great asset both to administrators responsible for examinations and to academics and other professionals who seek to understand the nature and impact of examinations of different types and in different settings.†? Mark Bray, UNESCO Chair Professor of Comparative Education, University of Hong Kong; and former Director, UNESCO International Institute for Educational Planning “I am sure that Public Examinations Examined, which thoroughly analyzes the practice of public examinations in different countries and makes profound and well-grounded

conclusions, will arouse very great interest and will serve to further improve public examinations.†? Victor Bolotov, Distinguished Professor, Higher School of Economics, National Research University, Moscow; member, Russian Academy of Education; and former Deputy Minister of Education, Russian Federation

How do schools protect young people and call on the youngest citizens to

respond to violent conflict and division operating outside, and sometimes within, school walls? What kinds of curricular representations of conflict contribute to the construction of national identity, and what kinds of encounters challenge presumed boundaries between us and them? Through contemporary and historical case studies--drawn from Cambodia, Egypt, Northern Ireland, Peru, and Rwanda, among others--this collection explores how societies experiencing armed conflict and its aftermath imagine education as a space for forging collective identity, peace and stability, and national citizenship. In some contexts, the erasure of conflict and the homogenization of difference are central to

shaping national identities and attitudes. In other cases, collective memory of conflict functions as a central organizing frame through which citizenship and national identity are (re)constructed, with embedded messages about who belongs and how social belonging is achieved. The essays in this volume illuminate varied and complex inter-relationships between education, conflict, and national identity, while accounting for ways in which policymakers, teachers, youth, and community members replicate, resist, and transform conflict through everyday interactions in educational spaces.

Considering that information and communication technology (ICT)

policymaking, e-strategies, or indeed e-government implementations have a recent history in Africa, not many countries have fully developed working policies or extensive related experience in these areas. The short history of ICTs in Africa shows that in 2003 only about a third of African countries had developed ICT policies. Those countries that have tell of a long, tedious, and little understood process. Kenya is only one example. Some ICT historians assert, not without contention, that the first attempts at ICT policymaking in Kenya actually date back to the early 1990s. The process is ongoing: Kenya's 2019s maiden draft ICT policy was made public in

November 2004. This book, which presents experience from Kenya and other countries of East Africa, captures elements of both the process and the outcomes of ICT policymaking processes. With contributions from research projects, institutions, and spokespersons from Kenya, Uganda, Tanzania, and Rwanda, this book shows what worked and what did not work. It will be a useful guide for countries and institutions that are contemplating their own ICT-policymaking exercise, and will be of interest to researchers, educators, and students in development studies, history, and comparative studies; development

professionals specializing in social policy and ICTs; and decision-makers and policy advisors in research and development organizations worldwide.
