History of the Twelfth Massachusetts Volunteers (Webster Regiment) MIRA White Cargo is the forgotten story of the thousands of Britons who lived and died in bondage in Britain's American colonies. In the seventeenth and eighteenth centuries, more than 300,000 white people were shipped to America as slaves. Urchins were swept

up from London's streets to labor in the tobacco fields, where life expectancy was no more than two years. Brothels were raided to provide "breeders" for Virginia. Hopeful migrants were duped into signing as indentured servants, unaware they would become personal property who could be bought, sold, and even gambled away. Transported convicts were paraded for sale like livestock. Drawing on letters crying for help, diaries, and court and government archives, Don Jordan and Michael Walsh

demonstrate that the brutalities usually associated with black slavery alone were perpetrated on whites throughout British rule. The trade ended with American independence, but the British still tried to sell convicts in their former colonies, which prompted one of the most audacious plots in Anglo-American history. This is a saga of exploration and cruelty spanning 170 years that has been submerged under the overwhelming memory of black slavery. White Cargo brings the brutal,

uncomfortable story to the surface.

No issue in Shakespeare studies is more important than determining what he wrote. For over two centuries scholars have discussed the evidence that Shakespeare worked with co-authors on several plays, and have used a variety of methods to differentiate their contributions from his. In this wide-ranging study, Brian Vickers takes up and extends these discussions, presenting compelling evidence that Shakespeare wrote Titus Andronicus together with George Peele, Timon of Athens with Thomas Middleton, Pericles with George Wilkins, and Henry VIII and The Two Noble Kinsmen

with John Fletcher. In Part One Vickers reviews the standard processes of co-authorship as they can be reconstructed from documents connected with the Elizabethan stage, and shows that every major, and most minor dramatists in the Elizabethan, Jacobean, and Caroline theatres collaborated in getting plays written and staged. This is combined with a survey of the types of methodology used since the early nineteenth century to identify co-authorship, and a critical evaluation of some 'stylometric' techniques. Part Two is devoted to detailed analyses of the five collaborative plays, discussing every significant case made for and against

Shakespeare's co-authorship. Synthesizing two centuries of discussion, Vickers reveals a solidly based scholarly tradition, building on and extending previous work, identifying the co-authors' contributions in increasing detail. The range and quantity of close verbal analysis brought together in Shakespeare, Co-Author present a compelling case to counter those 'conservators' of Shakespeare who maintain that he is the sole author of his plays.

Making Death Matter MIRA
This thesis is a contribution to feminist laboratory studies and a critical engagement with the natural sciences, or more precisely research on the biochemical workings and deadly relations of Alzheimer ' s disease emanating from a year of field work in a Drosophila fly lab. The natural sciences have been a point of fascination within the field of gender studies for decades. Such sciences produce knowledge on what gets to count as nature and natural, healthy or

sick, normal or not, and they have done it with great societal authority and impact throughout European modernity. However, feminist technoscience scholars argue that science and knowledge is socially produced, and political too. Concepts such as nature, animal, human, body, sex, and life itself are not simply given natural realities but phenomena processed through the naturecultures of the laboratory. Situated within such theoretical and methodological approaches, this thesis wonders how scientific facts about Alzheimer ' s disease are made in the lab today. What kinds of realities, bodies and ethico-political concerns are enacted? Who gets to live and who gets to

die in everyday laboratory practices? Theoretically, the thesis is grounded, particularly, within Karen Barad ' s agential realism and posthumanist performativity, and as such it accounts for human and nonhuman entanglements through which AD is performed in the lab in relational ways. In other words, the thesis explores how AD is enacted in the bodies of transgenic fruit flies (*Drosophila melanogaster*), as these flies embody the disease, live and die with it. Last but not least, the thesis explores the materialities of death, dying, embodiment and biological waste in a biochemistry lab as constitutive parts of the produced knowledge about AD.

SOIL: beneath our feet / food and fiber / ashes to ashes, dust to dust / dirt! Soil has been called the final frontier of environmental research. The critical role of soil in biogeochemical processes is tied to its properties and place—porous, structured, and spatially variable, it serves as a conduit, buffer, and transformer of water, solutes and gases. Yet what is complex, life-giving, and sacred to some, is ordinary, even ugly, to others. This is the enigma that is soil. Soil and

Culture explores the perception of soil in ancient, traditional, and modern societies. It looks at the visual arts (painting, textiles, sculpture, architecture, film, comics and stamps), prose & poetry, religion, philosophy, anthropology, archaeology, wine production, health & diet, and disease & warfare. Soil and Culture explores high culture and popular culture—from the paintings of Hieronymus Bosch to the films of Steve McQueen. It looks at ancient societies and contemporary artists. Contributors from a variety of disciplines delve into the mind of Carl Jung and the bellies of

soil eaters, and explore Chinese paintings, African mud cloths, Mayan rituals, Japanese films, French comic strips, and Russian poetry.

Here, for the first time in more than eighty years, is a detailed study of political Antimasonry on the national, state, and local levels, based on a survey of existing sources. The Antimasonic party, whose avowed goal was the

destruction of the Masonic Lodge and other secret societies, was the first influential third party in the United States and introduced the device of the national presidential nominating convention in 1831. Vaughn focuses on the celebrated "Morgan Affair" of 1826, the alleged murder of a former Mason who exposed the fraternity's secrets. Thurlow Weed quickly transformed the crusading spirit aroused by this incident into an anti-Jackson party in New York. From New York, the party

soon spread through the Northeast. To achieve success, the Antimasons in most states had to form alliances with the major parties, thus becoming the "flexible minority." After William Wirt's defeat by Andrew Jackson in the election of 1832, the party waned. Where it had been strong, Antimasonry became a reform-minded, anti-Clay faction of the new Whig party and helped to secure the presidential nominations of William Henry Harrison in 1836 and 1840. Vaughn

concludes that although in many ways the Antimasonic Crusade was finally beneficial to the Masons, it was not until the 1850s that the fraternity regained its strength and influence.
