Ted Striphas argues that, although the

production and propagation of books have undoubtedly entered a new phase, printed works are still very much a part of our everyday lives. With examples from trade journals, news media, films, advertisements, and a host of other commercial and scholarly materials, Striphas tells a story of modern publishing that proves, even in a rapidly digitizing world, books are anything but dead. From the rise of retail superstores to Oprah's phenomenal reach, Striphas tracks the methods through which the book industry has adapted (or has failed to adapt) to rapid changes in twentieth-century print culture. Barnes & Noble, Borders, and Amazon.com have established new routes of traffic in and around books, and pop sensations like Harry Potter and the Oprah Book Club have inspired the kind of brand loyalty that could only make advertisers swoon. At the same time,

advances in digital technology have presented the book industry with extraordinary threats and unique opportunities. Striphas's provocative analysis offers a counternarrative to those who either triumphantly declare the end of printed books or deeply mourn their passing. With wit and brilliant insight, he isolates the invisible processes through which books have come to mediate our social interactions and influence our habits of consumption, integrating themselves into our routines and intellects like never before.

Managing technology and globalization are two of the main concerns facing companies today. This book argues that the success of firms such as Ericsson and Nokia is a function of how they have managed these two areas simultaneously. The author summarises the development of the global mobile communications industry to date,

examining how global standards have been established, and why particular firms have succeeded within these standards. He goes on to examine the factors that will determine the market leaders in third-generation mobile communications systems and phones, and shows how other high technology industries can benefit from the strategies used.
