Gretchen Krueger's poignant narrative explores how doctors, families, and the public interpreted the experience of childhood cancer from the 1930s through the 1970s. Pairing the transformation of childhood cancer from killer to curable disease with the personal experiences of young patients and their families, Krueger illuminates the twin realities of hope and suffering. In this social history, each decade follows a family whose experience touches on key themes: possible causes, means and timing of detection, the search for curative treatment, the merit of alternative treatments, the decisions to pursue or halt therapy, the side effects of treatment, death and dying—and cure. Recounting the complex and sometimes contentious interactions among the families of children with cancer, medical researchers, physicians, advocacy organizations, the media, and policy makers, Krueger reveals that personal odyssey and clinical challenge are the simultaneous realities of childhood cancer. This engaging study will be of interest to historians, medical practitioners and researchers, and people whose lives have been altered by cancer.

Mobile Money is a booming industry in an increasing number of countries worldwide. The project results from increased demand for guidance and technical assistance from governments after the 2008 publication of an exploratory paper, Integrity in Mobile Phone Financial Services, which discussed mobile money and the application of international anti-money laundering (AML) and combating the financing of terrorism (CFT) standards. For most, how to craft a regulatory regime that expands access to financial services to the poor through the development of mobile phone financial services, but compliant with AML/CFT standards remains elusive. Specific AML/CFT regulations related to mobile money have not been issued in many jurisdictions, mainly due to the lack of awareness of the risks these services can pose if the right controls are not in place. Because the international standards for AML/CFT, the Financial Action Task Force's 40 + 9 Recommendations were designed and issued well before mobile money technology and business models became prevalent, even developed countries have begun to face challenges with their regulation. The project team aims to provide practical guidance to jurisdictions and the industry on how to draft regulations and internal guidelines that allow them to comply with AML/CFT standards with enough flexibility for mobile money to thrive. Specifically, the paper (1) takes stock of new AML/CFT regulations and practices relevant to Mobile money, (2) design guidelines for drafting AML/CFT regulations that cover mobile money and (3) propose examples of best practices for the industry to include AML/CFT in their own business model.
