Unit 2 - Relationships Among Quantities

The first unit of Coordinate Algebra involves relationships between quantities. This unit builds on these earlier experiences by asking students to analyze and explain the process of solving an equation. Students will be provided with examples of real-world problems that can be modeled by writing an equation or inequality.

1: Relationships Between Quantities and Expressions 3. The context of
a problem tells us what types of units are involved. Dimensional
analysis is a way to determine relationships among quantities using
their dimensions, units, or unit equivalencies. Dimensional analysis
suggests which
