Industrial revolutions have impacted both, manufacturing and service. From the steam engine to digital automated production, the

industrial revolutions have conducted significant changes in operations and supply chain management (SCM) processes. Swift changes in manufacturing and service systems have led to phenomenal improvements in productivity. The fast-paced environment brings new challenges and opportunities for the companies that are associated with the adaptation to the new concepts such as Internet of Things (IoT) and Cyber Physical Systems, artificial intelligence (AI), robotics, cyber security, data analytics, block chain and cloud technology. These emerging technologies facilitated and expedited the birth of Logistics 4.0. Industrial Revolution 4.0 initiatives in SCM has attracted stakeholders' attentions due to it is ability to empower using a set of technologies together that helps to

execute more efficient production and distribution systems. This initiative has been called Logistics 4.0 of the fourth Industrial Revolution in SCM due to its high potential. Connecting entities, machines, physical items and enterprise resources to each other by using sensors, devices and the internet along the supply chains are the main attributes of Logistics 4.0. IoT enables customers to make more suitable and valuable decisions due to the data-driven structure of the Industry 4.0 paradigm. Besides that, the system's ability of gathering and analyzing information about the environment at any given time and adapting itself to the rapid changes add significant value to the SCM processes. In this peer-reviewed book, experts from all over the world, in the field present a conceptual

framework for Logistics 4.0 and provide examples for usage of Industry 4.0 tools in SCM. This book is a work that will be beneficial for both practitioners and students and academicians, as it covers the theoretical framework, on the one hand, and includes examples of practice and real world.

This new open access edition supported by the Fragility Fracture Network aims at giving the widest possible dissemination on fragility fracture (especially hip fracture) management and notably in countries where this expertise is sorely needed. It has been extensively revised and updated by the experts of this network to provide a unique and reliable content in one single volume. Throughout the book, attention is given to the difficult question of how to provide best practice in countries where the discipline of geriatric medicine is not well established and resources for secondary prevention are scarce. The revised and updated chapters on the epidemiology of hip fractures,

osteoporosis, sarcopenia, surgery, anaesthesia, medical management of frailty, peri-operative complications, rehabilitation and nursing are supplemented by six new chapters. These include an overview of the multidisciplinary approach to fragility fractures and new contributions on pre-hospital care, treatment in the emergency room, falls prevention, nutrition and systems for audit. The reader will have an exhaustive overview and will gain essential, practical knowledge on how best to manage fractures in elderly patients and how to develop clinical systems that do so reliably.

This open access book presents the first comprehensive overview of general methods in Automated Machine Learning (AutoML), collects descriptions of existing systems based on these methods, and discusses the first series of international challenges of AutoML systems. The recent success of commercial ML applications and the rapid growth of the field has created a high demand for off-the-shelf ML methods that can be used easily and without

expert knowledge. However, many of the recent machine learning successes crucially rely on human experts, who manually select appropriate ML architectures (deep learning architectures or more traditional ML workflows) and their hyperparameters. To overcome this problem, the field of AutoML targets a progressive automation of machine learning, based on principles from optimization and machine learning itself. This book serves as a point of entry into this quickly-developing field for researchers and advanced students alike, as well as providing a reference for practitioners aiming to use AutoML in their work.

There have been significant developments in the state of psychological, neuroscientific and behavioural scientific knowledge relating to the human mind, brain, action and decision-making over the past two decades. These developments have influenced public policy making and popular culture in the UK and elsewhere – through policies and emerging social practices focussed on behavioural change, happiness, wellbeing, therapy, resilience and character. Yet little attention has been paid to examining the wider political and ethical significance of the widespread use of psychological governance techniques. There is a pressing and recognised need to address the behaviour change agenda in relation to how our cultural

ideas about the brain, mind, behaviour and self are changing. This book provides a critical account of existing forms of psychological governance in relation to public policy. It asks whether we can speak of a co-ordinated and novel shift in governance or, rather, whether these trends are more simply pragmatic policy tools based on advances in scientific evidence. With contributions from leading scholars across the social sciences from the UK, the USA and Canada, chapters identify practical, political and research challenges posed by the current policy enthusiasm for particular branches of affective neuroscience, behavioural economics, positive psychology and happiness economics. The core focus of this book is to investigate the ways in which knowledge about the mind, brain and behaviour has informed the methods and techniques of governance and to explore the

implications of this for shaping citizen identity and social practice. This groundbreaking book will be of interest to students, scholars and policy-makers interested and working within geography, economics, sociology, psychology, politics and cultural studies.
