This book, now in its second edition, continues to provide a thorough treatment of the principles of management and administration. The contents of this book in this edition have been enhanced to serve the expanding needs of management students. Divided into eleven parts, this book in Part I (Introduction) provides an overview of the key concepts of management. In Part II (Planning) and in Part III (Organising and Staffing), the emphasis has been laid on the traditional functions of management. Similiarly, Part IV (Direction and Controlling) and Part V (Management in Future) of this book outline the key futuristic thoughts. As the book advances to Part VI (Personnel Management) and Part VII (Financial Management), it explains the best practices and steps to their implementation its potential benefits and pitfalls. Part VIII (Production Management) deals with the organisational functions. Part IX (Marketing Management) and Part X (Management Information System) of this book discuss the role played by the information system in an organisation. Finally, in Part XI (Project Management), it describes the meaning, life cycles and the method of preparing a project in an organisation. Designed for the students of B.Com (Pass and Hons.) and BBA courses, this book will also be valuable to all those who are studying for professional qualifications such as MBA, CA, ICWA and CS. NEW TO THIS EDITION Includes three new parts—Part VIII (Production Management); Part X (Management Information System) and Part XI (Project Management) Contains two new chapters, Organisational Culture and Group Dynamics (Chapter 11) and Career Strategy and Career Development (Chapter 23). Incorporates new sections in several chapters to broaden the coverage.

This book provides a comprehensive overview on Transcranial Direct Current Stimulation (tDCS) and the clinical applications of this promising technique. Separated into three parts, the book begins with basic principles, mechanisms and approaches of tDCS. This is followed by a step-by-step practicum, methodological considerations and ethics and professional conduct pertaining to this novel technique. Chapters are authored by renowned experts who also direct and plan tDCS educational events worldwide. Bridging the existing gap in instructional materials for tDCS while addressing growing interest in education in this field, professionals within a broad range of medical disciplines will find this text to be an invaluable guide.

How we recruit future healthcare professionals is critically important, as the demand for high quality healthcare increases across the globe. This book questions what the evidence tells us about how best to select those most suited to a career in healthcare, ensuring that the approaches used are relevant and fair to all who apply. The editors of this collection take a comprehensive look at the latest research surrounding recruitment and selection into healthcare roles. Each chapter is authored by leading experts and, using international case material, the practical implications for workforce policy are explored. They review the key stages in designing effective selection systems and discuss how best to evaluate the quality of selection processes. Evidence from role analysis studies as well as the effectiveness of different selection methods including aptitude and situational judgment tests, personality assessment and interviews are examined. Chapters also cover approaches to student selection and recruitment for postgraduate trainees through to senior appointments. Finally they highlight contemporary issues in recruitment, including the use of technology, selecting for values, candidate perceptions, coaching issues and how best to promote diversity and widening access.

Medical Neurobiology explains the fundamentals of the nervous system as it relates to human health. The text uses everyday examples to clarify neural function. The contribution of the nervous system to diverse and common medical disorders such as Parkinson's disease, hearing loss.myopia, hypertension, and asthma are explored.  
2012-2013 College Admissions Data Sourcebook West Edition Springer  
A successful health care unit means meeting patients ’ expectations, taking advantage of the latest organizational and technological solutions and, at the same time, providing financial balance. To achieve such a success the units have to put stress on modern methods of management, taking into account the cost analysis, its structure, controlling and caring about income. It is surprising why it has been so difficult for the hospitals to implement changes in their organization or management in favorable conditions for innovations. Is there any opposition to the innovations, successfully implemented in other companies and enterprises, which makes it impossible to introduce them in Polish hospitals? Transposing organizational solutions from other fields of economy to medical units is the task not only for the scientists but also for the managers of health care who are responsible for hospitals ’ existence and finding a common ground for cooperation with the representatives from the world of medicine. However, the latter must join and support the system of management as all its parts are equally important so, if one single element of the system, seemingly unimportant, is inefficient, the system collapses.

Introducing neurobiology through an evolutionary, organismal, and experimental perspective, Neurobiology covers not only what neuroscientists have learned about the brain in terms of facts and ideas, but also how they have learned it through key experiments. With a strong emphasis on neuralcircuits and systems, this text bridges the gap between the cellular and molecular end and the cognitive end of the neuroscience spectrum, allowing students to grasp the full breadth of the subject.
