This complete entry-level textbook from leading authors gives students the confidence they need to succeed in core mathematics skills in preparation for undergraduate courses in engineering or science, or to build skills to support the mathematical elements of other degree courses. Its unique programmed approach takes students through the mathematics they need in a step-by-step fashion with a wealth of examples and exercises. The text demands that students engage with it by asking them to complete steps that they can manage from previous examples or knowledge they have acquired, while carefully introducing new steps. By working with the authors through the examples, students become proficient as they go. By the time they come to trying examples on their own, confidence is high. The text is aimed at students on Foundation courses in engineering, construction, science and computer science, and for all mathematics courses for students of business studies, psychology, and geography.

Educational Testing provides support for those undertaking training in, and for training providers of, the Certificate of Competence in Educational Testing (CCET) (Level A). Developed by the British Psychological Society (BPS) the CCET aims to meet a need for standards for the use of tests in education in the UK, to encourage

responsible test use by psychologists and non-psychologists alike. Written by the designers of the certificate and endorsed by the BPS's Steering Committee on Test Standards, Educational Testing is the only book of its kind available: Covers the 71 elements of the CCET in detail and acts as a 'course text' for those in training
Describes each core competence
Provides model answers and examples
Offers an indication of the range of ways in which the core competences may be assessed by the Assessor, based upon the existing BPS Guidance for Assessors document
Appendices offer guidance on BPS Standards, a glossary of technical terms, useful web-sites and on-line resources and Test Publishers Addresses.

This report presents the results of a paleoseismic investigation designed to date a long series of consecutive earthquakes on the Wasatch fault zone and to measure the variability of recurrence times between the events. Geologists have long recognized that the comparatively short average recurrence interval (compared to most other basin-and-range normal faults) between large surface-faulting earthquakes on the Salt Lake City segment of the Wasatch fault zone during mid- to late-Holocene time is potentially anomalous, and possibly affected by the rise and fall of Lake Bonneville. This study extends the paleoearthquake record back to Bonneville time, nearly doubling the previous record, and provides new information on the timing and periodicity of surface faulting on the Salt Lake City segment from the latest Pleistocene through the Holocene. The trench and accompanying auger hole for this study exposed 26 meters of vertical section,

roughly four times that of a typical paleoseismic trench on the Wasatch fault zone, hence the name “Megatrench.”
