Know Thyself: The Value and Limits of Self-Knowledge takes the reader on tour of the nature, value, and limits of self-knowledge. Mitchell S. Green calls on classical sources like Plato and Descartes, 20th-century thinkers like Freud, recent developments in neuroscience and experimental psychology, and even Buddhist philosophy to explore topics at the heart of who we are. The result is an unvarnished look at both the achievements and drawbacks of the many attempts to better know one's own self. Key topics in this volume include:
Knowledge – what it means to

know, the link between wisdom and knowledge, and the value of living an "examined life"
Personal identity – questions of dualism (the idea that our mind is not only our brain), bodily continuity, and personhood
The unconscious – including the kind posited by psychoanalysis as well as the form proposed by recent research on the so-called adaptive unconscious
Free will – if we have it, and the recent arguments from neuroscience challenging it
Self-misleading – the ways we willfully deceive ourselves, and how this relates to empathy, peer disagreement, implicit bias, and intellectual humility
Experimental psychology – considerations on the automaticity of emotion and other cognitive processes, and how they shape us
This book is designed to be used in conjunction with the free 'Know Thyself' MOOC (massive open online course) created through collaboration of the University of Connecticut's Project on Humility and Conviction in

Public Life, and the University of Edinburgh's Eidyn research centre, and hosted on the Coursera platform (<https://www.coursera.org/learn/know-thyself>). The book is also suitable as a text for interdisciplinary courses in the philosophy of mind or self-knowledge, and is highly recommended for anyone looking for a short overview of this fascinating topic.

Negotiating the Environment Springer

At a time when environmental and social stakes are at their highest – with rising crises and contradictions at the nexus of a building sense of environmental and social collapse – there are no easy solutions.

Global Im-Possibilities explores just what can be done around the world to ameliorate this dynamic. Using a range of essays and a multitude of case studies, this book explores what new lessons can be learned from examining the challenges and impediments to achieving just sustainabilities on the levels of policy, planning, and practice, and considers how these challenges and impediments can be addressed by individuals and/or governments. Taking a nuanced approach to provide an intersectional analysis of a particular issue relating to the ideals for achieving sustainability, this book asserts that that it is only in recognizing such complexity that we can hope to achieve just sustainabilities.

The American Jewish Year Book, which spans three different centuries, is the annual record of the North American Jewish communities and provides insight into their major trends. Part I of the current volume contains the lead article: Chapter 1, "Pastrami, Verklempt, and Tshoot-

spa: Non-Jews' Use of Jewish Language in the US" by Sarah Bunin Benor. Following this chapter are three on domestic and international events, which analyze the year's events as they affect American Jewish communal and political affairs. Three chapters analyze the demography and geography of the US, Canada, and world Jewish populations. Part II provides lists of Jewish institutions, including federations, community centers, social service agencies, national organizations, synagogues, Hillels, camps, museums, and Israeli consulates. The final chapters present national and local Jewish periodicals and broadcast media; academic resources, including Jewish Studies programs, books, journals, articles, websites, and research libraries; and lists of major events in the past year, Jewish honorees, and obituaries. While written mostly by academics, this volume conveys an accessible style, making it of interest to public officials, professional and lay leaders in the Jewish community, as well as the general public and academic researchers. The American Jewish Year Book has been a key resource for social scientists exploring comparative and historical data on Jewish population patterns. No less important, the Year Book serves organization leaders and policy makers as the source for valuable data on Jewish communities and as a basis for planning. Serious evidence-based articles regularly appear in the Year Book that focus on analyses and reviews of critical issues facing American Jews and their communities which are indispensable for scholars and community leaders. Calvin Goldscheider, Professor Emeritus of Sociology and Ungerleider Professor Emeritus of Judaic Studies, Brown University They have done it again. The American Jewish Year Book has produced yet another edition to add to its distinguished tradition of providing facts, figures and analyses of contemporary life in North America. Its well-researched and easily accessible essays offer the most up to date scrutiny of topics and challenges of importance

to American Jewish life; to the American scene of which it is a part and to world Jewry.

Whether one is an academic or professional member of the Jewish community (or just an interested reader of all things Jewish), there is not another more impressive and informative reading than the American Jewish Year Book. A "persuasive and essential" (Matthew Desmond) work that will forever change how we look at life after prison in America through Miller's "stunning, and deeply painful reckoning with our nation's carceral system" (Heather Ann Thompson). Each year, more than half a million Americans are released from prison and join a population of twenty million people who live with a felony record. Reuben Miller, a chaplain at the Cook County Jail in Chicago and now a sociologist studying mass incarceration, spent years alongside prisoners, ex-prisoners, their friends, and their families to understand the lifelong burden that even a single arrest can

entail. What his work revealed is a simple, if overlooked truth: life after incarceration is its own form of prison. The idea that one can serve their debt and return to life as a full-fledge member of society is one of America's most nefarious myths. Recently released individuals are faced with jobs that are off-limits, apartments that cannot be occupied and votes that cannot be cast. As *The Color of Law* exposed about our understanding of housing segregation, *Halfway Home* shows that the American justice system was not created to rehabilitate. Parole is structured to keep classes of Americans impoverished, unstable, and disenfranchised long after they've paid their debt to society. Informed by Miller's experience as the son and brother of incarcerated men, captures the stories of the men, women, and communities fighting against a system that is designed for them to fail. It is a poignant and eye-opening call to arms that reveals how laws, rules, and regulations extract a tangible cost not only from those working to rebuild their lives, but also our democracy. As Miller searchingly explores, America must acknowledge and value the lives of its formerly imprisoned citizens. and sustainable practices of dealing with contaminants. Emerging contaminant remediation is a pressing need due to the ever-increasing pollution in the environment, and it has gained a lot of scientific and public attention due to its high effectiveness and sustainability. The discussions in the book on the bioremediation of these contaminants are covered from the perspective of proven technologies and practices through case studies and real-world data. One of the main benefits of this book is that it summarizes future challenges and sustainable solutions. It can, therefore, become an effective guide to the elimination (through sustainable practices) of emerging contaminants. At the back of these explorations on sustainable bioremediation of emerging contaminants lies the set of 17 goals articulated by the United Nations in its 2030 Agenda for Sustainable Development, adopted by all its member states. This book provides academics, researchers, students, and practitioners interested in the detection and elimination of emerging contaminants from the environment, with the latest advances by leading experts in emerging contaminants the field of environmental sciences. Covers most aspects of the most predominant emerging contaminants in the environment, including in soil, air, and water. Describes the occurrence of these contaminants, the problems they cause, and the sustainable practices to deal with the contaminants. Includes data from case studies to provide real-world examples of sustainable practices and emerging contaminant remediation.

Introduction to Public Relations: Strategic, Digital, and Socially Responsible Communication presents a comprehensive introduction to the field of public relations (PR) with a focus on new media and social responsibility. Recognizing that the shifts in technology, business, and culture require a fresh approach, authors Janis Teruggi Page and Lawrence J. Parnell show students how today's PR professionals create persuasive messages with modern technologies while working in line with the industry's foundations. The authors balance this approach with

a focus on understanding communication theory, history, process, and practice, and how all these concepts can be applied to strategic PR planning. The Second Edition features new and refreshed content throughout, including cases, chapter-opening scenarios, and profiles of both young and senior practitioners with tips and career guidance for student success. Included with this title: The password-protected Instructor Resource Site (formally known as SAGE Edge) offers access to all text-specific resources, including a test bank and editable, chapter-specific PowerPoint® slides. Human Rights and the Negotiation of American Power Routledge

It took nearly a century for a tiny agricultural school in the hills to transform itself into the powerful state university that is UConn, and the game of basketball has been integral to the rise of Huskymania. In the University of Connecticut Basketball Vault: The History of the Huskies you will find the stories of all the heroes of the Husky hardwood, from Louis Alexander to Walt Dropo to Ray Allen and Khalid El-Amin. Author Ken Davis has spent more than 30 years covering college basketball, including 20 for The Hartford Courant, and here he combines great game coverage with behind-the-scenes anecdotes to present a view of Connecticut basketball you won't find anywhere else. UConn fans will also find never-before-published vintage photographs, artwork and memorabilia drawn from Connecticut's extensive campus archives, including reproductions of old game programs, historic tickets, stickers and other amazing replicas tucked into dozens of pockets.

The American attitude toward human rights is deemed inconsistent, even hypocritical: while the United States is characterized (or self-characterized) as a global leader in promoting human rights, the nation has consistently restrained broader interpretations of human rights and held international enforcement mechanisms at arm's length. Human Rights and the Negotiation of American Power examines the

causes, consequences, and tensions of America's growth as the leading world power after World War II alongside the flowering of the human rights movement. Through careful archival research, Glenn Mitoma reveals how the U.S. government, key civil society groups, Cold War politics, and specific individuals contributed to America's emergence as an ambivalent yet central player in establishing an international rights ethic. Mitoma focuses on the work of three American civil society organizations: the Commission to Study the Organization of Peace, the National Association for the Advancement of Colored People, and the American Bar Association—and their influence on U.S. human rights policy from the late 1930s through the 1950s. He demonstrates that the burgeoning transnational language of human rights provided two prominent United Nations diplomats and charter members of the Commission on Human Rights—Charles Malik and Carlos Romulo—with fresh and essential opportunities for influencing the position of the United States, most particularly with respect to developing nations. Looking at the critical contributions made by these two men, Mitoma uncovers the unique causes, tensions, and consequences of American exceptionalism.

Conservation Biology and Biodiversity In the 1980s, biologists working in Lake Victoria in Africa discovered one of the most extraordinary products of evolution on the planet. Located in the Great Rift Valley, Lake Victoria is an enormous and deep lake about 68,900 km² in area (larger than Lake Huron, the second largest of North America's Great Lakes). Biologists were studying species of a family of fish called cichlids. When they sampled for fish in different locations of the lake, the researchers identified over 500 evolved species in total. However, the scientists soon discovered that the invasive Nile Perch was destroying the lake's cichlid population, bringing hundreds of cichlid species to extinction with devastating rapidity. Though women enter France's culinary professions at higher rates than ever, men still receive the lion's share of the major awards and Michelin stars. Rachel E. Black looks at the experiences of women in Lyon to examine issues of gender inequality in France's culinary industry. Known for its female-led kitchens, Lyon provides a unique setting for understanding the gender divide, as Lyonnais women have played a major role in maintaining the city's culinary heritage and its status as a center for innovation. Voices from history combine with present-day interviews and participant observation to reveal the strategies women use to navigate male-dominated workplaces or, in many cases, avoid men in kitchens altogether. Black also charts how constraints imposed by French culture minimize the impact of #MeToo and other reform-minded

movements. Evocative and original, *Cheffes de Cuisine* celebrates the successes of women inside the professional French kitchen and reveals the obstacles women face in the culinary industry and other male-dominated professions.

Campus leaders describe how community colleges, publicly funded universities, and private liberal arts colleges across America are integrating sustainability into curriculum, policies, and programs. In colleges and universities across the United States, students, faculty, and staff are forging new paths to sustainability. From private liberal arts colleges to major research institutions to community colleges, sustainability concerns are being integrated into curricula, policies, and programs. New divisions, degree programs, and courses of study cross traditional disciplinary boundaries; Sustainability Councils become part of campus governance; and new sustainability issues link to historic social and educational missions. In this book, leaders from twenty-four colleges and universities offer their stories of institutional and personal transformation. These stories document both the power of leadership—whether by college presidents, faculty, staff, or student activists—and the potential for institutions to redefine themselves. Chapters recount, among other things, how inclusive campus governance helped mobilize students at the University of South Carolina; how a course at the Menominee Nation's tribal college linked sustainability and traditional knowledge; how the president of Furman University convinced a conservative campus community to make sustainability a strategic priority; how students at San Diego State University built sustainability into future governance while financing a LEED platinum-certified student center; and how sustainability transformed pedagogy in a lecture class at Penn State. As this book makes clear, there are many paths to sustainability in higher education. These stories offer a snapshot of what has been accomplished and a roadmap to what is possible. Sustainable and Resilient Communities University of Toronto Press

Is our imagination adequate to the realities of global warming? The novelist Amitav Ghosh argues that we need art and literature to help us imagine our future in the Anthropocene, but that they are falling short of the task. If culture cannot help us see the realities of our plight, then our era, which so congratulates itself on its self-awareness, may come to be known as the time of the Great Derangement. A case in point is fiction, which is so committed to normalcy and the everyday that it has no space for the improbability of climate change events the persistent droughts, hundred-year storms, and freakish tornadoes. Our politics, likewise, seems unable to mobilize forcefully in response to climate change. Ghosh argues that politics, like literature, has become a matter of individual moral reckoning, a journey of the solitary conscience rather than an arena of collective action. But to limit fiction and politics to individual moral adventure comes at a great cost. The climate crisis asks us to imagine other forms of human existence a task to which fiction, Ghosh argues, is the best suited of all cultural forms. A powerful nonfiction work by one of our most gifted, historically attuned novelists, "The Great Derangement" brings a fresh urgency to

thinking on climate change. "

Written by the co-founder and former board president of a non-profit shared-use commercial kitchen, *Understanding Just Sustainabilities from Within* presents an intersectional analysis of CLiCK (Commercially Licensed Co-operative Kitchen), in order to explore what just sustainabilities can look and feel like from within and without. Through a unique combination of auto ethnography, participant observation, surveys and secondary research, this book offers insights into CLiCK ' s micro and macro successes, failures, and unknowns in relation to its attempt to put the concept of just sustainabilities into daily practice, and praxis. Developing its practical analyses from a theoretical basis, this book does not focus on definitive answers, recognizing instead that the closest we can get to understanding just sustainabilities in praxis is through long-term collective struggle and ultimately love.

Researchers and educators who are interested in linking theory with practice, especially in relation to just Sustainabilities and intersectionality, will appreciate the theoretical grounding, making it desirable for multiple social science classes.

Additionally, those involved with the social justice, food justice and just sustainabilities movements will benefit from the book ' s insights into best practices to address issues of social inequalities on the micro level, while also offering the benefits of a macro intersectional analysis.

Civil society participants have voiced concerns that the environmental problems that were the subject of multilateral environmental agreements negotiated during the 1992 Rio processes are not serving to ameliorate global environmental problems. These concerns raise significant questions regarding the utility of negotiating agreements through the UN. This book elucidates the complexity of how participants engage in these negotiations through the various processes that take place under the auspices of the UN—primarily those related to climate and

biological diversity. By taking an ethnographic approach and providing concrete examples of how it is that civil society participants engage in making policy, this book develops a robust sense of the implications of the current terrain of policy-making—both for the environment, and for the continued participation of non-state actors in multilateral environmental governance. Using data gathered at actual negotiations, the book develops concepts such as participation and governance beyond theory. The research uses participant observation ethnographic methods to tie the theoretical frameworks to people ' s actual activities as policy is generated and contested. Whereas topics associated with global environmental governance are traditionally addressed in fields such as international relations and political science, this book contributes to developing a richer understanding of the theories using a sociological framework, tying individual activities into larger social relations and shedding light on critical questions associated with transnational civil society and global politics.
