Nonprofit leaders are beginning to confront the most important unfinished business of their sector. Having invented scores of successful model programs to address virtually every type of social problem or goal, they are discovering that large-scale, sustained impact remains elusive. Today, the only way to get the full benefit of successful programs, however, is for nonprofit leaders to begin building high-performance organizations?nonprofits that are capable of creating sustained, effective impact. That requires reversing decades of under-investment in the capacity of nonprofits. A sector that has been indifferent, if not hostile, to the needs of its organizations, where leaders are forced to manage upstream, against countless obstacles, now needs to apply its ingenuity and passion to the challenge of creating high-performance organizations. Drawing on management techniques used by successful managers in both businesses and nonprofits, *High Performance Nonprofit Organizations* outlines approaches that nonprofits can use to build their capacity for learning, innovating, ensuring quality, and motivating staff. Illustrated with case studies and examples, the book outlines processes for achieving these goals, including:

- * human resources management-to attract and develop employees truly in synch with an organization's mission
- * benchmarking-to identify practices that best meet a nonprofit's needs
- * responsiveness and quality systems-to continuously review and upgrade quality of service
- * product development-to tap the talents of every employee to create effective programs

The authors argue that these processes?far from corrupting a nonprofit with practices that evolved to make companies more profitable?actually help an organization convert its values and integrity into results for clients and communities. These adaptive capacities help nonprofits deliver on their mission, building the model organization that will make the biggest impact with model programs. *High Performance Nonprofit Organizations* goes further, laying out an agenda for changing the nonprofit environment, making it more supportive of its managers and more aware of the potential of organizational capacity. The authors assess the special opportunity of several stakeholders-including the nonprofit board, foundations, and the national office of multisite nonprofits?to create a new culture that values organizational performance. For the nonprofit manager trying to build an organization that is truly responsive to its clients and community, *High Performance Nonprofit Organizations* is an essential review of best practices. For the board member, foundation program officer, or nonprofit leader trying to create sustained impact, it is a provocative challenge to deal with the sector's unfinished business with a new approach.

The Mekong is the most controversial river in Southeast Asia, and increasingly the focus of international attention. It flows through 6 countries, China, Myanmar, Laos, Thailand, Cambodia and Viet Nam. The 4 downstream countries have formed the Mekong River Commission to promote sustainable development of the river and many of their people depend on it for their subsistence ? it has possible the largest freshwater fishery in the world, and the Mekong waters support rice agriculture in the delta in Viet Nam (which produces about 40% of that country's food) as well as in Cambodia, Laos and Thailand. China is now building the first large mainstream dam on the river, and has proposals for several more. These dams are likely to affect the downstream countries. Several of the downstream countries also have plans for large scale hydropower and irrigation development which could also impact the river. This book will provide a solid overview of the biophysical environment of the Mekong together with a discussion of the possible impacts, biophysical, economic and social, of some possible development scenarios. It is intended to provide a technical basis which can inform the growing political and conservation debate about the future of the Mekong River, and those who depend on it. It is aimed at river ecologists, geographers, environmentalists and development specialists both in the basin and (especially) outside for whom access to this material is most difficult. This book will be the first comprehensive treatment of the Mekong system. The first comprehensive overview of all aspects of the Mekong River system Deals with a regionally critical ecosystem and one under threat The Mekong supports the world's largest freshwater fishery and provides water underpinning a major regional rice paddy system Presents the authoritative findings of the Mekong River Commission's research for a wider audience for the first time outside of limited distribution reports

The four principles that can help us to overcome our brains' natural biases to make better, more informed decisions--in our lives, careers, families and organizations. In *Decisive*, Chip Heath and Dan Heath, the bestselling authors of *Made to Stick* and *Switch*, tackle the thorny problem of how to overcome our natural biases and irrational thinking to make better decisions, about our work, lives, companies and careers. When it comes to decision making, our brains are flawed instruments. But given that we are biologically hard-wired to act foolishly and behave irrationally at times, how can we do better? A number of recent bestsellers have identified how irrational our decision making can be. But being aware of a bias doesn't correct it, just as knowing that you are nearsighted doesn't help you to see better. In *Decisive*, the Heath brothers, drawing on extensive studies, stories and research, offer specific, practical tools that can help us to think more clearly about our options, and get out of our heads, to improve our decision making, at work and at home.

Many of today's parents struggle with their approach in raising a healthy daughter within our complex culture. Never before have girls been faced with so many pressures to live up to confusing and often contradictory cultural expectations. These burdens are intense, newly evolving, and are affecting girls at earlier and earlier ages. As girls of all ages listen to the messages of popular culture, they gather that their worth is based upon a perfect appearance, the ability to gain attention and approval from others, and their accrual of accomplishments. As girls absorb these expectations, they begin to believe they are not good enough as they are. They are not able to develop an authentic sense of self because they lose themselves in trying to become what the culture dictates. It is not surprising that with all of these pressures, girls are experiencing stress, emptiness, and skyrocketing rates of mental health problems. Parents know that something is very wrong with today's culture, but they can't quite put a name on the problem. Many feel helpless as popular cultural influences pervade modern life at every turn. This book, however, provides parents with reassurance that their influence can make a significant difference in their daughters' development. Parents are empowered to make positive choices to help girls learn to resist cultural pressures and to successfully navigate the transitions they will face in their journey as girls in today's culture. Written in an engaging, practical style, Laura Choate draws from research and counseling literature to provide parents with tools they can use to teach their daughters the power of resilience. The book begins with a portrait of the contemporary adolescent girl's environment, including an in-depth exploration of cultural pressures and an overview of how these pressures influence girls' physical, cognitive, and social development. In the second part of the book, parents learn about five resilience dimensions that girls need not only to survive, but to thrive as they develop during girlhood and adolescence. Practical tools for instilling resilience regarding girls' positive body image, healthy relationships with friends and romantic partners, and management of high-pressure academic environments through a redefinition of what it means to be successful are all discussed extensively.

Management decisions on appropriate practices and policies regarding tropical forests often need to be made in spite of innumerable uncertainties and complexities. Among the uncertainties are the lack of formalization of lessons learned regarding the impacts of previous programs and projects. Beyond the challenges of generating the proper information on these impacts, there are other difficulties that relate with how to socialize the information and knowledge gained so that change is transformational and enduring. The main complexities lie in understanding the interactions of social-ecological systems at different scales and how they varied through time in response to policy and other processes. This volume is part of a broad research effort to develop an independent evaluation of certification impacts with stakeholder input, which focuses on FSC certification of natural tropical forests. More specifically, the evaluation program aims at building the evidence base of the empirical biophysical, social, economic, and policy effects that FSC certification of natural forest has had in Brazil as well as in other tropical countries. The contents of this volume highlight the opportunities and constraints that those responsible for managing natural forests for timber production have experienced in their efforts to improve their practices in Brazil. As such, the goal of the studies in this volume is to serve as the foundation to design an impact evaluation framework of the impacts of FSC certification of natural forests in a participatory manner with interested parties, from institutions and organizations, to communities and individuals.

One of the greatest challenges teachers and parents face today is the increasing number of children who do not respond to traditional instructions and classroom management techniques. Chief among the children who present such a challenge are those who were prenatally exposed to alcohol and illicit drugs. In the past twenty years, we have learned more and more about these children and the lives of chaos and daily change many of them face. The difficulty has been translating this growing body of knowledge into practical information teachers can use in the classroom and parents can use at home. But there is good news. We now have research-based information that can guide schools and families in their efforts to address the needs of prenatally exposed children by developing appropriate interventions for behavioral and learning problems. Guided Growth incorporates the latest research-based information into a guide designed for teachers, parents, physicians, psychologists - for anyone who works with children. We recognize that in many (if not most) cases, you will not even know the child was exposed to alcohol or drugs before birth. But the strategies we propose are appropriate for any child whose behavioral difficulties do not respond to standard interventions.

Shirley Zinn's story is one of determination, courage, and triumph over incredible adversity. Born and raised on the Cape Flats, Shirley never allowed her past to dictate her future. She proved that the typical story of a girl from the Cape Flats - that of gangsterism, alcoholism and teenage pregnancy - didn't have to be her story. Instead she relentlessly pursued her own goals and forged an impressive academic career even when she faced significant odds. And when she'd done that, she set out to conquer the world of business. Shirley is a formidable woman with an amazing story to tell. She has risen to the top of the pile in both academic and business circles, and yet she has retained great humanity and empathy in the face of great personal tragedy. Her story has lessons for us all - whether we are ordinary or extraordinary, whether we work in business, in government, or at home. Shirley's story will inspire you and show you that it is possible to achieve your goals, if you are prepared to swim upstream and be single-minded in getting where you want to be.

Hiroshima is the story of six people—a clerk, a widowed seamstress, a physician, a Methodist minister, a young surgeon, and a German Catholic priest—who lived through the greatest single manmade disaster in history. In vivid and indelible prose, Pulitzer Prize – winner John Hersey traces the stories of these half-dozen individuals from 8:15 a.m. on August 6, 1945, when Hiroshima was destroyed by the first atomic bomb ever dropped on a city, through the hours and days that followed. Almost four decades after the original publication of this celebrated book, Hersey went back to Hiroshima in search of the people whose stories he had told, and his account of what he discovered is now the eloquent and moving final chapter of Hiroshima.
