Answer Key
Biology -
test.enableps.com
The important test
here is the
glucose test; the
abnormal finding
is the presence of
large amounts of
glucose in the
urine as well as
large volume of
urine output.
Urine should not
have glucose in it
because glucose
is an important
nutrient that gets
re-absorbed into
the blood after
being filtered into
the kidney.

Diabetes
mellitus is
caused by
inadequate

secretion of insulin from islet cells in the pancreas, which causes sugar levels to rise. People suffering from this disease will have higher blood sugar concentrations which remain in the nephrons and this is detected in their urine.
