Proclamation* CRC Press

Referred to as the "Grand Prix of epidemiology" by The New York Times, this study examines more than 350 variables of health and nutrition with surveys from 6,500 adults in more than 2,500 counties across China and

---

Taiwan, and conclusively demonstrates the link between nutrition and heart disease, diabetes, and cancer. While revealing that proper nutrition can have a dramatic effect on reducing and reversing these ailments as well as curbing obesity, this text calls into question the practices of many of the current dietary programs, such as the Atkins diet, that are widely popular in the West. The politics of nutrition and the impact of special interest groups in the creation and dissemination of public information are also discussed.

This is the fifth installment in the National Intelligence Council's series aimed at providing a framework for thinking about possible futures and their implications. The report is intended to stimulate strategic thinking about the rapid and vast geopolitical changes characterizing the world today and possible global trajectories during the next 15-20 years by identifying critical trends and potential discontinuities. The authors distinguish between megatrends, those factors that will likely occur under any scenario, and game-changers, critical variables whose trajectories are far less certain. Appropriate for anyone, from business to banks, government to start-ups, technology to teachers and more, this publication helps anticipate where the world will be socially, politically, technically and culturally

*Wonderword 10* Univ of North Carolina Press Clinical practice related to sleep problems and sleep disorders has been expanding rapidly in the last few years, but scientific research is not keeping pace. Sleep apnea, insomnia, and restless legs syndrome are three examples of very common disorders for which we have little biological information. This new book cuts across a variety of medical disciplines such as neurology, pulmonology, pediatrics, internal medicine,

psychiatry, psychology, otolaryngology, and nursing, as well as other medical practices with an interest in the management of sleep pathology. This area of research is not limited to very young and old patients—sleep disorders reach across all ages and ethnicities. Sleep Disorders and Sleep Deprivation presents a structured analysis that explores the following: Improving awareness among the general public and health care professionals. Increasing investment in interdisciplinary somnology and sleep medicine research training and mentoring activities. Validating and developing new and existing technologies for diagnosis

and treatment. This book will be of interest to those looking to learn more about the enormous public health burden of sleep disorders and sleep deprivation and the strikingly limited capacity of the health care enterprise to identify and treat the majority of individuals suffering from sleep problems.

Impoverished young Americans had no greater champion during the Depression than Eleanor Roosevelt. As First Lady, Mrs. Roosevelt used her newspaper columns and radio broadcasts to crusade for expanded federal aid to poor children and teens. She was the most visible spokesperson for the National Youth Administration, the New Deal's central agency for aiding needy youths, and she was adamant in insisting that federal aid to young people be administered without

discrimination so that it reached blacks as well as whites, girls as well as boys. This activism made Mrs. Roosevelt a beloved figure among poor teens and children, who between 1933 and 1941 wrote her thousands of letters describing their problems and requesting her help. Dear Mrs. Roosevelt presents nearly 200 of these extraordinary documents to open a window into the lives of the Depression's youngest victims. In their own words, the letter writers confide what it was like to be needy and young during the worst economic crisis in American history. Revealing both the strengths and the limitations of New Deal liberalism, this book depicts an administration concerned and caring enough to elicit such moving appeals for help yet unable to respond in the very personal ways the letter writers hoped.

Scores of talented and dedicated people serve the forensic science community, performing vitally important work. However, they are often constrained by lack of adequate resources, sound policies, and national support. It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote best practices with consistent application.

Strengthening Forensic Science in the United States: A Path Forward provides a detailed plan for addressing these needs and suggests the creation of a new government entity, the National Institute of

Forensic Science, to establish and enforce standards within the forensic science community. The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing homeland security, and reducing the risk of wrongful conviction and exoneration.

Strengthening Forensic Science in the United States gives a full account of what is needed to advance the forensic science disciplines, including upgrading of systems and organizational structures, better training, widespread adoption of uniform and enforceable best practices, and mandatory certification and accreditation programs.

While this book provides an essential call-to-action for congress and policy makers,

---

it also serves as a vital tool for law enforcement agencies, criminal prosecutors and attorneys, and forensic science educators.

### Social Studies Through the Year Hidden History -- Spies

The rapid growth of home health care has raised many unsolved issues and will have consequences that are far too broad for any one group to analyze in their entirety. Yet a major influence on the safety, quality, and effectiveness of home health care will be the set of issues encompassed by the field of human factors research-the discipline of applying what is known about human capabilities and limitations to the design of products, processes, systems, and work environments. To address these challenges, the

National Research Council began a multidisciplinary study to examine a diverse range of behavioral and human factors issues resulting from the increasing migration of medical devices, technologies, and care practices into the home. Its goal is to lay the groundwork for a thorough integration of human factors research with the design and implementation of home health care devices, technologies, and practices. On October 1 and 2, 2009, a group of human factors and other experts met to consider a diverse range of behavioral and human factors issues associated with the increasing migration of medical devices, technologies, and care practices into the home. This book is a summary of that workshop, representing the

---

culmination of the first phase of the study.

conversations that never seemed to convert into meaningful action, special investigator and psychologist Jill Peterson and sociologist James Densley built The Violence Project, the first comprehensive database of mass shooters. Their goal was to establish the root causes of mass shootings and figure out how to stop them by examining hundreds of data points in the life histories of more than 170 mass shooters—from their childhood and adolescence to their mental health and motives. They've also interviewed the living perpetrators of mass shootings and people who knew them, shooting survivors, victims' families, first responders, and leading experts to gain a comprehensive firsthand understanding of the real

stories behind them, rather than the sensationalized media narratives that too often prevail. For the first time, instead of offering thoughts and prayers for the victims of these crimes, Peterson and Densley share their data-driven solutions for exactly what we must do, at the individual level, in our communities, and as a country, to put an end to these tragedies that have defined our modern era.

The Role of Human Factors in Home Health Care

Significant changes have taken place in the policy landscape surrounding cannabis legalization, production, and use. During the past 20 years, 25 states and the District of Columbia have legalized cannabis and/or cannabidiol (a component of cannabis) for medical conditions or retail sales at the state level and 4 states have legalized both the medical

---

and recreational use of cannabis. These landmark changes in policy have impacted cannabis use patterns and perceived levels of risk. However, despite this changing landscape, evidence regarding the short- and long-term health effects of cannabis use remains elusive. While a myriad of studies have examined cannabis use in all its various forms, often these research conclusions are not appropriately synthesized, translated for, or communicated to policy makers, health care providers, state health officials, or other stakeholders who have been charged with influencing and enacting policies, procedures, and laws related to cannabis use. Unlike other controlled substances such as alcohol or tobacco, no accepted standards for safe use or appropriate dose are available to help guide individuals as they make choices regarding the issues of if, when, where, and how to use cannabis safely and, in regard to therapeutic uses, effectively. Shifting public sentiment, conflicting and impeded scientific research, and legislative battles

have fueled the debate about what, if any, harms or benefits can be attributed to the use of cannabis or its derivatives, and this lack of aggregated knowledge has broad public health implications. The *Health Effects of Cannabis and Cannabinoids* provides a comprehensive review of scientific evidence related to the health effects and potential therapeutic benefits of cannabis. This report provides a research agenda — outlining gaps in current knowledge and opportunities for providing additional insight into these issues — that summarizes and prioritizes pressing research needs.

[The Civil Rights Movement in Mississippi](#) National Academies Press

Based on new research and combining multiple scholarly approaches, these twelve essays tell new stories about the civil rights movement in the state most resistant to change. Wesley Hogan, Fran ç oise N. Hamlin, and Michael Vinson Williams raise

---

questions about how civil rights organizing took place. Three pairs of essays address African Americans' and whites' stories on education, religion, and the issues of violence. Jelani Favors and Robert Luckett analyze civil rights issues on the campuses of Jackson State University and the University of Mississippi. Carter Dalton Lyon and Joseph T. Reiff study people who confronted the question of how their religion related to their possible involvement in civil rights activism. By studying the Ku Klux Klan and the Deacons for Defense in Mississippi, David Cunningham and Akinyele Umoja ask who chose to use violence or to raise its possibility. The final three chapters describe some of the consequences and continuing questions raised by the civil rights movement. Byron D'Andra Orey analyzes the degree to which voting rights translated into political power for African American legislators. Chris Myers Asch studies a Freedom School that started in recent years in the Mississippi Delta. Emilye Crosby details the conflicting memories of Claiborne County residents and the parts of the civil rights movement they recall or ignore. As a group, the essays introduce numerous new characters and conundrums into civil rights scholarship, advance efforts to study African Americans and whites as interactive agents in the complex stories, and encourage historians to pull civil rights scholarship closer toward the present.

This document is a response to teachers' requests for practical assistance in implementing California's history-social science framework. The document offers stimulating ideas to enrich the teaching of history and social science, enliven instruction for every student, focus on essential topics, and help make learning more memorable. Experiences and contributions of ethnic groups and women in history are integrated in this course model. The framework is divided into 11 units: (1) Connecting with Past Learnings: Uncovering the Remote Past; (2) Connecting with Past Learnings: the Fall of Rome; (3) Growth of Islam; (4) African States in the Middle Ages and Early Modern Times; (5) Civilizations of the Americas; (6) China; (7) Japan; (8) Medieval Societies: Europe and Japan; (9) Europe During the Renaissance, the Reformation, and the Scientific

Revolution; (10) Early Modern Europe: The Age of Exploration to the Enlightenment; and (11) Linking Past to Present. Six of the 11 units delineated in the framework's 7th grade course description are developed in these course models. All units follow the same format. Each begins with a rationale and overview. Ways are suggested for teachers to coordinate the model with the state-adopted textbook for 7th grade. A presentation of activities to introduce and continue the sample topic are suggested to encourage students to apply what they have studied through projects. Each unit ends with an extensive annotated list of sample resources. (DK)
