Escape Essay Hell! is a fast-and-easy guide to writing narrative-style essays for college application essays. Janine Robinson, an English teacher and professional writer who has tutored college-bound students on these essays for years, acts as a personal writing coach to guide and cheer students through this dreaded process. College admissions "experts" tell students to "Tell a story," or "Make the essay about you!" or "Be an individual." And this is all correct. But no one ever explains exactly HOW they can do this. Until now. In her motivating guide, Janine takes students through 10 simple steps to find engaging topics and then craft compelling essays using storytelling writing techniques. Students will learn how to identify their unique defining qualities, write engaging mini-stories called anecdotes, and use a powerful Show and Tell writing formula. Escape Essay Hell! can help students write personal statements and respond to prompts for The Common Application, public university, private college, supplemental, graduate school and scholarship essays. By following these informative and inspiring steps, students will escape Essay Hell in no time at all--and have their best shot at landing in their dream school!

Technology scholars declare an emergency: attention must be paid to the inequality, marginalization, and biases woven into our technological systems. This book sounds an alarm: we can no longer afford to be lulled into complacency by narratives of techno-utopianism, or even techno-neutrality. We should not be reassured by such soothing generalities as "human error," "virtual reality," or "the cloud." We need to realize that nothing is virtual: everything that "happens online," "virtually," or "autonomously" happens offline first, and often involves human beings whose labor is deliberately kept invisible. Everything is IRL. In *Your Computer Is on Fire*, technology scholars train a spotlight on the inequality, marginalization, and biases woven into our technological systems.

How does graduate admissions work? Who does the system work for, and who falls through its cracks? More people than ever seek graduate degrees, but little has been written about who gets in and why. Drawing on firsthand observations of admission committees and interviews with faculty in 10 top-ranked doctoral programs in the humanities, social sciences, and natural sciences, education professor Julie Posselt pulls back the curtain on a process usually conducted in secret. "Politicians, judges, journalists, parents and prospective students subject the admissions policies of undergraduate colleges and professional schools to considerable scrutiny, with much public debate over appropriate criteria. But the question of who gets into Ph.D. programs has by comparison escaped much discussion. That may change with the publication of *Inside Graduate Admissions*...While the departments reviewed in the book remain secret, the general process used by elite departments would now appear to be more open as a result of Posselt's book." —Scott Jaschik, *Inside Higher Ed*

CI/ASCE Standard 38-02 presents a credible system for classifying the quality of utility location information that is placed in design plans. The Standard addresses issues such as: how utility information can be obtained, what technologies are available to obtain that information; how that information can be conveyed to the information users; who should be responsible for typical collection and depiction tasks; what factors determine which utility quality level attribute to assign to data; and what the relative costs and benefits of the various quality levels are. Used as a reference or as part of a specification, the Standard will assist engineers, project and utility owners, and constructors in developing strategies to reduce risk by improving the reliability of information on existing subsurface utilities in a defined manner.

Scores of talented and dedicated people serve the forensic science community, performing vitally important work. However, they are often constrained by lack of adequate resources, sound policies, and national support. It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote best practices with consistent application. *Strengthening Forensic Science in the United States: A Path Forward* provides a detailed plan for addressing these needs and suggests the creation of a new government entity, the National Institute of Forensic Science, to establish and enforce standards within the forensic science community. The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing homeland security, and reducing the risk of wrongful conviction and exoneration. *Strengthening Forensic Science in the United States* gives a full account of what is needed to advance the forensic science disciplines, including upgrading of systems and organizational structures, better training, widespread adoption of uniform and enforceable best practices, and mandatory certification and accreditation programs. While this book provides an essential call-to-action for congress and policy makers, it also serves as a vital tool for law enforcement agencies, criminal prosecutors and attorneys, and forensic science educators.

These colleges and universities provide an outstanding educational experience for the gifted college-bound student and provide the foundations for life after graduation. *Your Computer Is on Fire* National Academies Press [Comprehensive Preparedness Guide \(CPG\) 101](#) provides Federal Emergency Management Agency (FEMA) guidance on the fundamentals of planning and developing emergency operations plans (EOP). CPG 101 shows that EOPs are connected to planning efforts in the areas of prevention, protection, response, recovery, and mitigation. Version 2.0 of this Guide expands on these fundamentals and encourages emergency and homeland security managers to engage the whole community in addressing all risks that might impact their jurisdictions. While CPG 101 maintains its link to previous guidance, it also reflects the reality of the current operational planning environment. This Guide integrates key concepts from national preparedness policies and doctrines, as well as lessons learned from disasters, major incidents, national assessments, and grant programs. CPG 101 provides methods for planners to: Conduct community-based planning that engages the whole community by using a planning process that represents the actual population in the community and involves community leaders and the private sector in the planning process; Ensure plans are developed through an analysis of risk; Identify operational assumptions and resource demands; Prioritize plans and planning efforts to support their seamless transition from development to execution for any threat or hazard; Integrate and synchronize efforts across all levels of government. CPG 101 incorporates the following concepts from operational planning research and day-to-day experience: The process of planning is just as important as the resulting document; Plans are not scripts followed to the letter, but are flexible and adaptable to the actual situation; Effective plans convey the goals and objectives of the intended operation and the actions needed

to achieve them. Successful operations occur when organizations know their roles, understand how they fit into the overall plan, and are able to execute the plan. Comprehensive Preparedness Guide (CPG) 101 provides guidelines on developing emergency operations plans (EOP). It promotes a common understanding of the fundamentals of risk-informed planning and decision making to help planners examine a hazard or threat and produce integrated, coordinated, and synchronized plans. The goal of CPG 101 is to make the planning process routine across all phases of emergency management and for all homeland security mission areas. This Guide helps planners at all levels of government in their efforts to develop and maintain viable all-hazards, all-threats EOPs. Accomplished properly, planning provides a methodical way to engage the whole community in thinking through the life cycle of a potential crisis, determining required capabilities, and establishing a framework for roles and responsibilities. It shapes how a community envisions and shares a desired outcome, selects effective ways to achieve it, and communicates expected results. Each jurisdiction's plans must reflect what that community will do to address its specific risks with the unique resources it has or can obtain. Planners achieve unity of purpose through coordination and integration of plans across all levels of government, nongovernmental organizations, the private sector, and individuals and families. This supports the fundamental principle that, in many situations, emergency management and homeland security operations start at the local level and expand to include Federal, state, territorial, tribal, regional, and private sector assets as the affected jurisdiction requires additional resources and capabilities. A shared planning community increases the likelihood of integration and synchronization, makes planning cycles more efficient and effective, and makes plan maintenance easier.

A memoir about showbiz in the early 20th century that travels from the theaters of Vienna, Prague, and Berlin, to Hollywood during the golden age, complete with encounters with Franz Kafka, Albert Einstein, and Greta Garbo along the

way. Salka Viertel's autobiography tells of a brilliant, creative, and well-connected woman's pilgrimage through the darkest years of the twentieth century, a journey that would take her from a remote province of the Austro-Hungarian Empire to Hollywood. The Kindness of Strangers is, to quote the New Yorker writer S. N. Behrman, "a very rich book. It provides a panorama of the dissolving civilizations of the twentieth century. In all of them the author lived at the apex of their culture and artistic aristocracies. Her childhood . . . is an entrancing idyll. In Berlin, in Prague, in Vienna, there appears Karl Kraus, Kafka, Rilke, Robert Musil, Schoenberg, Einstein, Alban Berg. There is the suffering and disruption of the First World War and the suffering and agony after it, which is described with such intimacy and vividness that you endure these terrible years with the author. Then comes the migration to Hollywood, where Salka's house on Mabery Road becomes a kind of Pantheon for the gathered artists, musicians, and writers. It seems to me that no one has ever described Hollywood and the life of writers there with such verve."
