Using Excel As a Beginner Tickling Keys, Inc.

Designed for users already familiar with basic computer operations, Neil J. Salkind's *Excel Statistics: A Quick Guide* shows readers how to utilize the features of Microsoft® Excel to answer both simple and complex questions about data analysis. Part I explores thirty Excel functions, each one detailed on a two-page

spread. The description and use of each function appear on one page with corresponding screen shots of the function in action on the facing page, allowing the user to see what the function looks like as it is being applied. Part II of the text contains fifteen Analysis Toolpak tools, each explained using the same two-page spread design as for the functions. Excel novices and experts alike will find this text not only practical but easy to use and engaging. Key Features: - Each function and tool is accompanied by an Excel file, accessible through the SAGE Web site, to be used as an example of each analysis. Access these files through the SAGE website (www.sagepub.com/salkindexcelstats) or through www.onlinefilefolder.com. - The screenshots and steps feature Microsoft

Excel 2010 and are compatible with Microsoft 97-2003 and Excel 5.0/95. - Designed to be used as both an introduction and a reference book as needed. Perfect as an accompaniment to existing introductory statistics books or in a lab setting.

This book is here to tell you everything you need to know to get started by using MS Excel. Please do follow all steps as described in the book, and in no time you'll become a pro. Before going much further, I'll like to discuss the term Excel briefly. What is Excel? It is simply a program that provides worksheets comprised of columns and rows. Data are stored in the worksheet, which is also called a spreadsheet. It is kind of similar to the Microsoft Word table. Still, one edge of Excel is its skill in performing complex to simple mathematical functions and calculations, especially when you are ready to create mathematical formulas. Now next up, we would briefly discuss the heart, the fundamental necessity of Excel without it; Excel becomes nothing. And that's Excel's workbook and its worksheet/spreadsheet. An Excel spreadsheet or worksheet is a 2-dimensional grid with rows and columns. The column names are lettered, and the alphabet begins with A, with the rows

numbered in a chronological order starting with number one. The cells, as identified in the first row, are A1, B1, and it goes on and on. And as for the cells in the first column, they are A1, A2, and it goes on and on. These are called cell references or cell names. Cell references are used in making mathematical functions or formulas, for instance, the formula to add contents C2 and D2 is, C2+D2. I do hope you get the hint.
