Cadillac has had a long history in the automotive marketplace as General Motors ’ luxury car division. During the 1980s, Cadillac's management wanted to reestablish the brand as a leader in sophistication, innovation, refinement and prestige. Engineers conceived a new dual-overhead cam, four-valve-per-cylinder V-8 engine—the Northstar. This power plant was the heart of Cadillac ’ s Northstar System, which included a greatly improved suspension and braking system. The division redesigned its entire line to incorporate these new technologies for the 1990s and beyond. The Northstar was the last engine designed and built by Cadillac before the 2005 establishment of GM Powertrain, which took over engine design for all GM divisions. This history of the Northstar V-8 and the cars it powered covers the first generation front-wheel drive Northstar, the second generation rear-wheel drive model, and the supercharged version, along with racing history and the most collectible Northstar-powered Cadillacs.

David D. Allyn has led a life that others can only dream about. Adventurer, traveler, sailor, aviator, explorer, and big-hearted bon vivant, Dave came of age while sailing around the world on the last voyage of the tall Brigantine Yankee with all the accompanying tales of drudgery and heat punctuated by terrifying gales, tension amongst the crew members, and a too-close encounter with a one-thousand-pound bull shark. Then there was the time he survived emergency

surgery on the ship's kitchen table. An adrenaline junky, Dave also flew planes back in the days when you needed a helmet and goggles to do it. Aviators and historians will delight in his vivid accounts of flying vintage aircraft-139 different types in all, as well as his stories of collecting a large fleet of famous old aircraft and establishing a fixed base operation-it's still there: Dolphin Aviation in Sarasota, Florida-and a museum. These stories aren't just about boats and aircraft, however, they're also about people and pristine landscapes. You'll visit Tahiti, Bimini, and the Galapagos before tourists got there. You'll meet cowboys, mechanics, skydivers, artists, deep-sea divers with a death wish, crazy drunks, and a host of other characters who knew how to live life large. A life-affirming, swaggering book, "Yardarm and Cockpit" is one wild ride without a seat belt.

Interest in biomass energy resources from forests, farms and other sources has been rapidly increasing in recent years because of growing concern with reducing carbon dioxide emissions and developing alternatives to increasingly scarce, expensive and insecure oil supplies. The uniqueness of this book is its coverage of biomass energy markets in the US from an economic as well as technical perspective. Existing books typically focus on single markets or technical aspects at the exclusion of economics, and have given greater coverage to biomass energy

outside the US. This edited collection has three main parts. Part One provides a historical overview of forest biomass energy use in the US; the major technologies, economics, market prospects, and policies. Part Two presents forest biomass energy assessments, including life cycle and sustainability perspectives, and Part Three includes five sets of regional case studies. After reviewing the history of wood energy use in the US and technology options, the book shows that forests could displace sixteen per cent of domestic transportation fuel use in 2030. Renewable Energy from Forest Resources in the United States includes a Foreword from Chris Flavin, President of the Worldwatch Institute.

Yardarm and Cockpit Hardcover
When the mighty Rocketdyne F-1 engine was conceived in the late 1950s for the U.S. Air Force, it had no defined mission and there was no launch vehicle it could power. It was a bold concept to push the technological envelope of rocket propulsion in order to put massive payloads into Earth orbit. Few realized at the time that the F-1 would one day propel American astronauts to the Moon. In The Saturn V F-1 Engine, Anthony Young tells the amazing story of unbridled vision, bold engineering, explosive failures during testing, unrelenting persistence to find solutions, and ultimate success in launching the Saturn V with a 100 percent success rate. The book contains personal interviews with many Rocketdyne and NASA personnel involved in the engine ’ s design, development, testing and production; is lavishly illustrated with black-and-white and color photographs, many never previously published is the first complete history of the most powerful rocket engine ever built. The F-1 engine remains the high point in U.S. liquid rocket propulsion – it represents a period in American history when nothing was impossible.
