A Guide to Affordable Exciting Cars  
Veloce Publishing Ltd

Launched in 1971, the Alfasud was an all-new departure for Alfa

Romeo, both in its design and its execution and became the best-selling model in the history of Alfa Romeo . Originally it was developed with the dual intentions of launching the company into large volume production and providing a more affordable model than their highly regarded sports cars. However, its story was far from straightforward. Although respected for its technically brilliant design and universally praised for its ride and handling, the model never quite reached its full sales potential and its reputation was marred by problems that could not have been

foreseen. With over 240 colour photographs, the book includes a brief history of Alfa Romeo to the end of the 1960s. The development of the Alfasud ' s design and the political reasons for building a new factory are given along with the car ' s reception from both the press and owners. The evolution of the model from initial prototypes, to the improvements to build quality and performance, including the Giardinetta and Sprint variations are covered as well as Alfasuds in competition. The political and labour problems, as well as the early quality control issues are discussed.

---

Finally, there are numerous specification tables, performance data, chassis numbers, engine codes and colour charts.

As understanding of the engineering design and configuration processes grows, the recognition that these processes intrinsically involve imprecise information is also growing. This book collects some of the most recent work in the area of representation and manipulation of imprecise information during the synthesis of new designs and selection of configurations. These authors all utilize the mathematics of fuzzy sets to represent information that has not-yet been reduced to precise descriptions, and in most cases also use the mathematics of probability to represent more traditional stochastic uncertainties such as uncontrolled manufacturing variations, etc. These advances form the nucleus of new formal methods to solve design, configuration, and concurrent engineering problems. The Alfa Romeo 105 series Spider is one of the most admired drop-head sports cars to come out of Italy. Launched in 1966, its radical new look was not immediately welcomed. As prospective buyers gradually warmed to the model, enhancements were introduced including more powerful engines and higher-spec body and interior fittings. Despite its inauspicious start, production of this much-admired car lasted for twenty-seven years, finally stopping in 1993. Jim Talbott and Andrew Brown pay homage to the 105/115 series Alfa Spider. With over 330 photographs, many specially commissioned, this new book describes the Alfa Romeo company history including its philosophy of incorporating

driver appeal into all of its products, resulting in some of the most desirable vehicles of their age; it details the evolution of the 105/115 series through four distinct body styles; lists the technical design specifications and every major version of the Spider and finally, discusses the issues and challenges of finding and owning a classic Spider.

Born to be Riled is a collection of hilarious vintage journalism from Jeremy Clarkson. Jeremy Clarkson, it has to be said, sometimes finds the world a maddening place. And nowhere more so than from behind the wheel of a car, where you can see any number of people acting like lunatics while in control (or not) of a ton of metal. In this collection of classic columns, first published in 1999, Jeremy takes a look at the world through his windscreen, shakes his head at what he sees - and then puts the boot in. Among other things, he explains:

- Why Surrey is worse than Wales
- How crossing your legs in America can lead to arrest
- The reason cable TV salesmen must be punched
- That divorce can be blamed on the birth of Jesus

Raving politicians, pointless celebrities, ridiculous 'personalities' and the Germans all

After saving Alfa Romeo from oblivion in 1987, it took Fiat nearly five years to debut the first new Alfa produced under its control. This is the story of how the competition versions of the 155/156/147 family of cars were developed and subsequently raced to many championship titles and race wins. Alfa Romeo's 155 saloon was a comprehensively successful racing touring car that won the German and world-wide DTM Championship, and later ITC races. The model also took on the role of representing the company in national touring car championships throughout the world, most notably winning the British Touring Car Championship in 1994. The 156 was Alfa's successor to the 155 and was also raced with much success. This book follows the development and competition history of this model too, along with its sibling, the 147. Together, these models kept the Alfa Romeo name at the pinnacle of motor sport for many years, from 1992 to 2006, and will become future motorsport classics.
