Ing. Joseph Amato was born on the island of Malta during the years of WWII and started his sailing days while the island was a major British naval base in the Mediterranean. Having received his education at St. Augustines College and later his engineering apprenticeship at the then Royal Naval Dockyard in Malta, he went on to follow a thirty-year sea-going career in the British Mercantile Marine, starting from coastal British and European ports, Baltic and Irish seas as far as Spitzbergen, Greenland and Icelandic ports. At twenty-nine years he obtained his class I, followed with a tanker endorsement on steam and motor propulsion and moved on to deep sea shipping, engaging himself on long distance voyaging, and as requested by various shipping companies. Now Joseph has retired from pushing tankers (VLCC) around the globe and prefers to enjoy his days afloat, propelled by the wind on his ketch-rigged sailing boat.

The need for manufacturers to meet U.S. Environmental Protection Agency (EPA) mobile source diesel emissions standards for on-highway light duty and heavy duty vehicles has been the driving force for the control of diesel particulate and NOx emissions reductions. Diesel Particulate Emissions: Landmark Research 1994-2001 contains the latest research and development findings that will help guide engineers to achieve low particulate emissions from future engines. Based on extensive SAE literature from the past seven years, the 45 papers in this book have been selected from the SAE Transactions Journals.
