The Samsung S6 is an Android smartphone that is manufactured by Samsung Electronics. It was the successor to the Samsung Galaxy S5 and was released in April of 2015. The S6 featured many similarities to the past S5 phone but it also featured some departures from design approaches and the integration of new technologies which made the phone robust and a leader in the smart phone space. The HTC One M9 is another great Android smartphone that is manufactured by HTC and was released in April 2015. This is a third generation smart phone that is intended to be the successor to the M8 that was released in 2014. The HTC One M9 is similar to its predecessor only in that the body is wider and somewhat thicker. They have also made it more advanced and ready to compete in the current smart phone space. This book is intended to look at the differences and compare the specifications of the Samsung Galaxy-S6 and the HTC One-M9.

The third generation HTC One M9 was announced in March of 2015. The phone has numerous upgraded features compared to the HTC One M8 including individual notifications, better camera quality, battery saving options, high quality audio and a higher resolution screen. The phone is programmed so that it works to personalize its features to work with the habits and activities of individual users and offer helpful apps and information at the right time. It also has many useful default apps and a large selection of additional apps which add to the user's experience. An enhanced user interface, which runs on the latest version of Android, also makes the phone simpler to use than its predecessors. One of the top advantages of the phone over its competitors is the large storage capacity and it is a favorite among music lovers who want to listen to quality audio and be able to save more of their music on a mobile device.

An ageing population is burdening social and healthcare services around the world, and this problem is likely to get worse as the percentage of older people continues to rise. Many governments are already responding to this challenge, and a key element in their strategies is the development and deployment of computer-based telecare and telehealth technologies to support care at home in a cost-effective manner. Human involvement in care continues to be central, but home care technologies can offer reassurance, and support routine aspects, to the benefit of all concerned. This book provides an up-to-date overview of key advances in the relevant technology, with an in-depth examination of the latest research in various home care technologies by experts in the field. The book mainly discusses the results of the Mobilising Advanced Technologies for Care at Home (MATCH) project, co-ordinated by the University of Stirling in Scotland, but work on related projects is also included. The book will be of interest to all researchers and practitioners in the fields of telecare and telehealth, policymakers in these areas, and providers of social and healthcare with an interest in technology.

Android NDK: Beginner's Guide - Second Edition Rough Guides UK

Land Management is normally embedded in a complex legal context, which frequently consists of contradictory objectives, such as: strengthening of rural areas, satisfying the need for affordable living and commercial space, protecting environment and health, supporting transport infrastructure development, and preserving the landscape. Land management can be understood as a process that comprises coordination of such activities while managing the use and the development of land resources. It can be constrained by the land use specifications resulting from spatial planning process. Along with this, the legal framework often contains generally formulated concepts and open standards, which provide a range of opportunities for realization while balancing the different interests. In this process it is important if and how both constraints and opportunities are recognised by the actors. In this volume this topic is examined from various aspects: first the problems in promoting mutual understanding between researchers and the general public, but also among scientists of different disciplines; second the success requirements of land management instruments as well as unfortunate experience caused by land use changes; third covering land management costs by absorbing value increase and other trade off aspects; and fourth supporting land management by providing geodata with low-cost methods.
