Smartphones are getting a little boring. All of the top devices have roughly the same features and specs. Manufacturers are trying harder than ever to differentiate their devices. The display has become an area of experimentation, but we 're not talking about pixels. More and more devices are getting curved displays, and one of the best entries is the LG G Flex 2. We 're at a point where many people consider curved displays to be nothing more than a gimmick. Manufacturers keep trying to find valuable uses, but so far no one has made a compelling case for why you need a curved display. LG has taken a much different approach. The G Flex 2 is not full of gimmicky features and silly widgets. It 's all about comfort, and that might be the best reason yet for curved displays.

Universal V-Ray Settings This page provides a tutorial on universal settings for V-Ray that work for most still images. Overview The "universal" settings comprise a set of settings that work very well for still images in many situations and are the default for V-Ray Next. Please note that these settings are not optimal, in the sense that with enough tweaking, you can probably get similar quality with faster render times. The beauty of these settings, though, is that they require almost no tweaking, and you are guaranteed to get a good result in the end. The advantages of these settings are: o very little parameters for controlling render quality vs. speed o works for a very large number of scenes o produces high-quality results With the Progressive Image Sampler, the default Render time (min) is set to 1.0, which might be insufficient for some scenes. You can reset this to 0.0 min and rendering will continue until the Noise threshold is reached. Setting the V-Ray Renderer 1. Set V-Ray as the current rendering engine (with the default V-Ray settings). 2. The default settings are optimized to work universally, so it is recommended to keep them: Progressive image sampler with 100 Max. subdivs and 1 Min. subdivs; GI enabled, using Brute Force as

Primary GI engine and Light Cache as Secondary GI engine. 3. You can further refine the noise levels from the Progressive Image sampler rollout by adjusting the Noise Threshold and placing a 0 value for the Render time (min). 4. You can control the amount of AA vs shading samples (for materials/lights/GI) using the Min shading rate parameter in the Image Sampler rollout but the default value is optimised to work well for the majority of scenes.

The third generation HTC One M9 was announced in March of 2015. The phone has numerous upgraded features compared to the HTC One M8 including individual notifications, better camera quality, battery saving options, high quality audio and a higher resolution screen. The phone is programmed so that it works to personalize its features to work with the habits and activities of individual users and offer helpful apps and information at the right time. It also has many useful default apps and a large selection of additional apps which add to the user's experience. An enhanced user interface, which runs on the latest version of Android, also makes the phone simpler to use than its predecessors. One of the top advantages of the phone over its competitors is the large storage capacity and it is a favorite among music lovers who want to listen to quality audio and be able to save more of their music on a mobile device.

Interactive mobile technologies have now become the core of many—if not all—fields of society. Not only do the younger generation of students expect a mobile working and learning environment, but also the new ideas, technologies and solutions introduced on a nearly daily basis also boost this trend.

Discussing and assessing key trends in the mobile field were the primary aims of the 11th International Conference on Interactive Mobile Communication,

Technologies and Learning (IMCL2017), which was held in Thessaloniki from 30 November to 01 December 2017. Since being founded in 2006, the conference has been devoted to new approaches in interactive mobile technologies, with a focus on learning. The IMCL conferences have in the meanwhile become a central forum of the exchange of new research results and relevant trends, as well as best practices. This book contains papers in the fields of: Future Trends and Emerging Mobile Technologies Design and Development of Mobile Learning Apps and Content Mobile Games—Gamification and Mobile Learning Adaptive Mobile Environments Augmented Reality and Immersive Applications Tangible, Embedded and Embodied Interaction Interactive Collaborative and Blended Learning Digital Technology in Sports Mobile Health Care and Training Multimedia Learning in Music Education 5G Network Infrastructure Case Studies Real-World Experiences The content will appeal to a broad readership, including policymakers, academics, educators, researchers in pedagogy and learning theory, school teachers, the learning industry, further education lecturers, etc.
