Metamaterials, artificial electromagnetic media achieved by structuring on the subwave-length-scale were initially suggested for the negative index and superlensing. They became a paradigm for engineering electromagnetic space and controlling propagation of waves. The research agenda is now shifting on achieving tuneable, switchable, nonlinear and sensing functionalities. The time has come to talk about the emerging research field of metadevices employing active and tunable metamaterials with unique functionalities achieved by structuring of functional matter on the subwave-length scale. This book presents the first systematic and comprehensive summary of the reviews written by the pioneers and top-class experts in the field of metamaterials. It addresses many grand challenges of the cutting edge research for creating smaller and more efficient photonic structures and devices.

Is a war between the US and China on the horizon? Can a Sino-American conflict lead to massive nuclear exchanges?

Can China launch a surprise nuclear Pearl Harbor against the US homeland? There are no definitive answers, but the

author's insights (part VI, "Unpublished Essays") provide indispensable information for pondering these grave

questions. This book documents the early history of the Taiwanese American community in the United States,

beginning in the 1950s. On January 1, 1956, the first Taiwan independence organization-Formosans' Free

Formosa (3F)-was launched in Philadelphia (see part I). Two years later, 3F was reorganized as United Formosans

for Independence (UFI). Parts II and III document little-known activities of 3F and UFI. Formosan Clubs, the

forerunner of present day Taiwanese American Associations, were born in Chicago and New York City, in

the mid-1950s. Part IV introduces the key contributors to the Clubs' birth. Sample pages of the newsletters are

reproduced to show a glimpse of life in the early days. Pacific Times was a nationwide Chinese language newspaper, published in Los Angeles for the Taiwanese American community. The author wrote short English editorials for the paper from 1999 to 2008. Sample pieces are reprinted in Part V. Part VI covers 19 unpublished essays from 1999 to 2009. The topics include US-Taiwan-China relations and US national security. Part VII reprints author's letters to the editor of US newspapers and academic journals from 1958 to 2009. Some letters dealt with noteworthy events, such as China's enactment of the Anti-secession Law. Most issues discussed in this tome remain unresolved and are still relevant today.

Volume II of The Official History of the UK Strategic Nuclear Deterrent provides an authoritative and in-depth examination of the British government's strategic nuclear policy from 1964 to 1970. Written with full access to the UK documentary record, Volume II examines the controversies that developed over nuclear policy following the arrival in office of a Labour government led by Harold Wilson in October 1964 that openly questioned the independence of the deterrent. Having decided to preserve the Polaris programme, Labour ministers were nevertheless committed not to develop another generation of nuclear weapons

beyond those in the pipeline, placing major doubts over the long-term future of the nuclear programme and collaboration with the United States. Defence planners also became increasingly concerned that the deployment of Soviet anti-ballistic missile (ABM) defences around Moscow threatened to undermine the ability of Polaris to fulfil its role as a national strategic nuclear deterrent. During 1967, under heavy pressures to control defence spending, a protracted debate was conducted within Whitehall over the future of Polaris and how to respond to the evolving ABM challenge. The volume concludes with Labour's defeat at the general election of June 1970, by which time the Royal Navy had assumed the nuclear deterrent role from the RAF, and plans had already been formulated for a UK project to improve Polaris which could both ensure its continuing credibility and rejuvenate the Anglo-American nuclear relationship. This book will be of much interest to students of British politics, Cold War history, nuclear proliferation and international relations.

We all know the basics of punctuation. Or do we? A look at most neighborhood signage tells a different story. Through sloppy usage and low standards on the internet, in email, and now text messages, we have made proper punctuation an endangered species. In *Eats, Shoots & Leaves*, former editor Lynne Truss dares to say, in her delightfully urbane, witty, and very English way, that it is time to look at our commas and semicolons and see them as the wonderful and necessary things they are. This is a book for people who love punctuation and get upset when it is mishandled. From the invention of the question mark in the time of Charlemagne to George Orwell shunning the semicolon, this lively history makes a powerful case for the preservation of a system of printing conventions that is much too subtle to be mucked about with.
