Logo Design Workbook focuses on creating powerful logo designs and answers the question, "What makes a logo work?" In the first half of this book, authors Sean Adams and Noreen Morioka walk readers step-by-step through the entire logo-development process. Topics include developing a concept that communicates the right message and is appropriate for both the client and the market; defining how the client's long-term goals might affect the look and needs of the mark; choosing colors and typefaces; avoiding common mistakes; and deciphering why some logos are successful whereas others are not. The second half of the book comprises in-depth case studies on logos designed for various industries. Each case study explores the design brief, the relationship with the client, the time frame, and the results.

Convolution is the most important operation that describes the behavior of a linear time-invariant dynamical system. Deconvolution is the unraveling of convolution. It is the inverse problem of generating the system's input from knowledge about the system's output and dynamics. Deconvolution requires a careful balancing of bandwidth and signal-to-noise ratio effects. Maximum-likelihood deconvolution (MLD) is a design procedure that handles both effects. It draws upon ideas from Maximum Likelihood, when unknown parameters are random. It leads to linear and nonlinear signal processors that provide high-resolution estimates of a system's input. All aspects of MLD are described, from first principles in this book. The purpose of this volume is to explain MLD as simply as possible. To do this, the entire theory of MLD is presented in terms of a convolutional signal generating model and some relatively simple ideas from

optimization theory. Earlier approaches to MLD, which are couched in the language of state-variable models and estimation theory, are unnecessary to understand the essence of MLD. MLD is a model-based signal processing procedure, because it is based on a signal model, namely the convolutional model. The book focuses on three aspects of MLD: (1) specification of a probability model for the system's measured output; (2) determination of an appropriate likelihood function; and (3) maximization of that likelihood function. Many practical algorithms are obtained. Computational aspects of MLD are described in great detail. Extensive simulations are provided, including real data applications.

With a new afterword by the author, this classic analysis of Western liberal capitalist society contends that capitalism—and the culture it creates—harbors the seeds of its own downfall by creating a need among successful people for personal gratification—a need that corrodes the work ethic that led to their success in the first place. With the end of the Cold War and the emergence of a new world order, this provocative manifesto is more relevant than ever.

Is the traditional, accepted view of the life of Christ in some way incomplete? • Is it possible Christ did not die on the cross? • Is it possible Jesus was married, a father, and that his bloodline still exists? • Is it possible that parchments found in the South of France a century ago reveal one of the best-kept secrets of Christendom? • Is it possible that these parchments contain the very heart of the mystery of the Holy Grail? According to the authors of this extraordinarily provocative, meticulously researched book, not only are these things possible — they are probably true! so revolutionary, so original, so convincing, that the most faithful Christians will be moved; here is the book that has sparked worldwide controversy. "Enough to seriously challenge many traditional Christian beliefs, if not alter them." — Los Angeles Times Book Review "Like Chariots of the Gods?...the plot has all the

elements of an international thriller." — Newsweek

A fifth-century Indian Buddhist monk, Bodhidharma is credited with bringing Zen to China. Although the tradition that traces its ancestry back to him did not flourish until nearly two hundred years after his death, today millions of Zen Buddhists and students of kung fu claim him as their spiritual father. While others viewed Zen practice as a purification of the mind or a stage on the way to perfect enlightenment, Bodhidharma equated Zen with buddhahood and believed that it had a place in everyday life. Instead of telling his disciples to purify their minds, he pointed them to rock walls, to the movements of tigers and cranes, to a hollow reed floating across the Yangtze. This bilingual edition, the only volume of the great teacher's work currently available in English, presents four teachings in their entirety. "Outline of Practice" describes the four all-inclusive habits that lead to enlightenment, the "Bloodstream Sermon" exhorts students to seek the Buddha by seeing their own nature, the "Wake-up Sermon" defends his premise that the most essential method for reaching enlightenment is beholding the mind. The original Chinese text, presented on facing pages, is taken from a Ch'ing dynasty woodblock edition.

Marking a complete break with previous scholarship in the field, this book rewrites the history of early Chan (Zen) Buddhism, focusing on the genealogy and doctrine of one of its dominant strains, the so-called Northern school that flourished at the turn of the eighth century. The traditional interpretation of the Northern school was heavily influenced by the polemics of one of its opponents, the monk Shenhui, who characterized the Northern school's teaching as propounding the belief that enlightenment occurred gradually, was measurable, and could be expressed in conventional language. To all this, Shenhui and his teaching of "sudden enlightenment" were opposed, and Shenhui's school and its version of history would later prevail. On the basis of documents found at Dunhuang, this book shows how the traditional view is incorrect, that Shenhui's imposition of a debate between gradual and sudden conceals the doctrinal continuity between the two schools and the diversity of Chan thought in the period. The author buttresses his conclusions by placing the evolution of early Chan in the intellectual, political, social, and economic context of the mid-Tang. The book is in three parts. The first part treats the biography and thought of the "founder" of the Northern school, Shenxiu, the nature of his followers, and his affinities for Buddhist scholasticism. The second part studies the way in which the Northern school, after Shenxiu, adapted to new circumstances: changes in imperial policies, the rise of rival schools, and changes in the nature of its followers. The third part focuses on the internecine struggles around the genealogy of Chan as reflected in the Lengqie shizi ji (Record of the Masters and Disciples of the Lankavatara [School]) by the monk Jingjue. A close reading of this work reveals that it foreshadowed many of the themes and issues that would later come to the forefront in Zen, and contributes significantly to our reassessment of the teachings and practices of "pre-classical" Chan.

Zen Sand is a classic collection of verses aimed at aiding practitioners of kôan meditation to negotiate the difficult relationship between insight and language. As such it represents a major contribution to both Western Zen practice and English-language Zen scholarship. In Japan the traditional Rinzai Zen kôan curriculum includes the use of jakugo, or "capping phrases." Once a monk has successfully replied to a kôan, the Zen master orders the search for a classical verse to express the monk's insight into the kôan. Special collections of these jakugo were compiled as handbooks to aid in that search. Until now, Zen students in the West, lacking this important resource, have been severely limited in carrying out this practice. Zen Sand combines and translates two standard jakugo handbooks and opens the way for incorporating this important tradition fully into Western Zen practice. For the scholar, Zen Sand provides a detailed description of the jakugo practice and its place in the overall kôan curriculum, as well as a brief history of the Zen phrase book. This volume also contributes to the understanding of East Asian culture in a broader sense.

The path to achieving Zen (a balance between the body and the mind) is brilliantly explained by Professor Eugen Herrigel in this timeless account. This book is the result of the author's six year quest to learn archery in the hands of Japanese Zen masters. It is an honest account of one man's journey to complete abandonment of 'the self' and the Western principles that we use to define ourselves. Professor Herrigel imparts knowledge from his experiences and guides the reader through physical and spiritual lessons in a clear and insightful way. Mastering archery is not the key to achieving Zen, and this is not a practical guide to archery. It is more a guide to Zen principles and learning and perfect for practitioners and non-practitioners alike.

This richly illustrated textbook explores the amazing interaction between combinatorics, geometry, number theory, and analysis which arises in the interplay between polyhedra and lattices. Highly accessible to advanced undergraduates, as well as beginning graduate students, this second edition is perfect for a capstone course, and adds two new chapters, many new exercises, and updated open problems. For scientists, this text can be utilized as a self-contained tooling device. The topics include a friendly invitation to Ehrhart's theory of counting lattice points in polytopes, finite Fourier analysis, the Frobenius coin-exchange problem, Dedekind sums, solid angles, Euler-Maclaurin summation for polytopes, computational geometry, magic squares, zonotopes, and more. With more than 300 exercises and open research problems, the reader is an active participant, carried through diverse but tightly woven mathematical fields that are inspired by an innocently elementary question: What are the relationships between the continuous volume of a polytope and its discrete volume? Reviews of the first edition: "You owe it to yourself to pick up a copy of Computing the Continuous Discretely to read about a number of interesting problems in geometry, number theory, and combinatorics." — MAA Reviews "The book is written as an accessible and engaging textbook, with many examples, historical notes, pithy quotes, commentary

integrating the material, exercises, open problems and an extensive bibliography." — Zentralblatt MATH "This beautiful book presents, at a level suitable for advanced undergraduates, a fairly complete introduction to the problem of counting lattice points inside a convex polyhedron." — Mathematical Reviews "Many departments recognize the need for capstone courses in which graduating students can see the tools they have acquired come together in some satisfying way. Beck and Robins have written the perfect text for such a course." — CHOICE

Koans are enigmatic spiritual formulas used for religious training in the Zen Buddhist tradition. Arguing that our understanding of the koan tradition has been severely limited, contributors to this collection examine previously unrecognized factors in the formation of this tradition, and highlight the rich complexity and diversity of koan practice and literature.
