In Movie Title Typos, artist Austin Light removes just one letter from a well-known movie title to inspire a surprising and hilarious visual scenario. There's Obocop (a robotic police officer works through his PTSD by playing smooth jazz), T. (a boy meets a jewelry-clad alien who pities fools), Harry Otter, The Princess and the Fro, Finding Emo, Pup Fiction, and many more. A massive viral hit when he first posted sketches of the work online (1.2 million hits in the first 6 hours), Light has created new full-color illustrations for all, with the majority of the book's content never before seen on the Web. Here is a parallel universe glimpse at could-have-been films possibly better—definitely funnier—than the originals.

The exuberant, exhilarating photographs of dogs underwater that have become a sensation From the water's surface, it's a simple exercise: a dog's leap, a splash, and then a wet head surfacing with a ball, triumphant. But beneath the water is a chaotic ballet of bared teeth and bubbles, paddling paws, fur and ears billowing in the currents. From leaping Lab to diving Dachshund, the water is where a dog's distinct personality shines through; some lounge in the current, paddling slowly, but others arch their bodies to cut through the water with the focus and determination of a shark. In more than eighty portraits, award-winning pet photographer and animal rights activist Seth Casteel captures new sides of our old friends with vibrant underwater photography that makes it impossible to look away. Each image bubbles with exuberance and life, a striking reminder that even in the most loveable and domesticated dog, there are more primal forces at work. In Underwater Dogs, Seth Casteel gives playful and energetic testament to the rough-and-tumble joy that our dogs bring into our lives.

“ An engaging, beautifully synthesized page-turner ” (Slate). The #1 New York Times bestseller and Time #1 Nonfiction Book of the Year: Hillary Rodham Clinton ' s most personal memoir yet, about the 2016 presidential election. In this “ candid and blackly funny ” (The New York Times) memoir, Hillary Rodham Clinton reveals what she was thinking and feeling during one of the most controversial and unpredictable presidential elections in history. She takes us inside the intense personal experience of becoming the first woman nominated for president by a major party in an election marked by rage, sexism, exhilarating highs and infuriating lows, stranger-than-fiction twists, Russian interference, and an opponent who broke all the rules. “ At her most emotionally raw ” (People), Hillary describes what it was like to run against Donald Trump, the mistakes she made, how she has coped with a shocking and devastating loss, and how she found the strength to pick herself back up afterward. She tells readers what it took to get back on her feet—the rituals, relationships, and reading that got her through, and what the experience has taught her about life. In this “ feminist manifesto ” (The New York Times), she speaks to the challenges of being a strong woman in the public eye, the criticism over her voice, age, and appearance, and the double standard confronting women in politics. Offering a “ bracing... guide to our political arena ” (The Washington Post), What Happened lays out how the 2016 election was marked by an unprecedented assault on our democracy by a foreign adversary. By analyzing the evidence and connecting the dots, Hillary shows just how dangerous the forces are that shaped the outcome, and why Americans need to understand them to protect our values and our democracy in the future. The election of 2016 was unprecedented and historic. What Happened is the story of that campaign, now with a new epilogue showing how Hillary grappled with many of her worst fears coming true in the Trump Era, while finding new hope in a surge of civic activism, women running for office, and young people marching in the streets.

Regression Modeling: Methods, Theory, and Computation with SAS

provides an introduction to a diverse assortment of regression techniques using SAS to solve a wide variety of regression problems. The author fully documents the SAS programs and thoroughly explains the output produced by the programs. The text presents the popular ordinary least squares (OLS) approach before introducing many alternative regression methods. It covers nonparametric regression, logistic regression (including Poisson regression), Bayesian regression, robust regression, fuzzy regression, random coefficients regression, L1 and q-quantile regression, regression in a spatial domain, ridge regression, semiparametric regression, nonlinear least squares, and time-series regression issues. For most of the regression methods, the author includes SAS procedure code, enabling readers to promptly perform their own regression runs. A Comprehensive, Accessible Source on Regression Methodology and Modeling Requiring only basic knowledge of statistics and calculus, this book discusses how to use regression analysis for decision making and problem solving. It shows readers the power and diversity of regression techniques without overwhelming them with calculations.

Internet of Things Little, Brown

This book is intended for use as the textbook in a second course in applied statistics that covers topics in multiple regression and analysis of variance at an intermediate level. Generally, students enrolled in such courses are primarily graduate majors or advanced undergraduate students from a variety of disciplines. These students typically have taken an introductory-level statistical methods course that requires the use of a software system such as SAS for performing statistical analysis. Thus students are expected to have an understanding of basic concepts of statistical inference such as estimation and hypothesis testing. Understandably, adequate time is not available in a first course in statistical methods to cover the use of a software system adequately in the amount of time available for instruction. The aim of this book is to teach how to use the SAS system for data analysis. The SAS language is introduced at a level of sophistication not found in most introductory SAS books. Important features such as SAS data step programming, pointers, and line-hold speakers are described in detail. The powerful graphics support available in SAS is emphasized throughout, and many worked SAS program examples contain graphic components.

The smartphone in your pocket can easily be turned into a high-tech spy tool and counter-surveillance device to rival anything that Ian Fleming's Q might have dreamt up. You can communicate secretly, browse the web anonymously, access the Deep Web and hidden networks, view banned content, download privately and continue using Twitter and Facebook if their services are ever blocked locally. Conversely, mobile devices are not secure unless you make them so. If somebody wants to know where you are at this precise moment, your smartphone will tell them - even if it is turned off. The push by the commercial world and more recently by law enforcement and surveillance agencies to monitor all we do has led to a counter-revolution. The Mobile Internet has evolved and so has its counter-surveillance tools. Rather like spies in a James Bond movie, mobile users have an array of digital tools to call upon, both to mask their identity and to provide real confidence that their correspondence, data and contacts are secure. There are smartphone apps that let you see in the dark or measure the height of a building. You can film and record without being rumbled; send emails, PMs and SMS that cannot be intercepted or read. You can even take over and control many public and private security cameras. Conrad Jaeger and Alan Pearce have written numerous books on cyber-security and all are available on Amazon.
