Discover how the NG-RAN architecture is, and isn't, ready for the challenges introduced by 5G 5G Radio Access Network Architecture: The Dark Side of 5G explores foundational and advanced topics in Radio Access Network (RAN) architecture and why a re-thinking of that architecture is necessary to support new 5G requirements. The distinguished engineer and editor Sasha Sirotkin has included numerous works written by industry insiders with state of the art research at their disposal. The book explains the relevant standards and technologies from an academic perspective, but also explains why particular standards decisions were made and how a variety of NG-RAN architecture options could be deployed in real-life networks. All major standards and technologies associated with the NG-RAN architecture are discussed in this book, including 3GPP, O-RAN, Small Cell Forum, IEEE, and IETF. Readers will learn about how a re-design of the RAN architecture would ensure that 5G networks can deliver their promised throughput and low latency KPIs consistently and sustainably. The book is structured as follows: An overview of the market drivers of the NG-RAN architecture, like spectrum models, 5G-relevant regulatory considerations, and 5G radio interface technical requirements An overview of the 5G System, from the core network, to the RAN, to the radio interface protocols and physical layer, with emphasis on how these are different compared to 4G Release-15 RAN architectures defined in 3GPP, O-RAN, and Small Cell Forum RAN architecture evolution in Release-16 and Release-17 Enabling technologies, like virtualization, open source technologies, multi-access edge (MEC) computing, and operations, administration, and management (OAM) NG-RAN deployment considerations, objectives, and challenges, like costs, spectrum and radio propagation considerations, and coverage Perfect for network designers and operators who require a solid understanding of the NG-RAN architecture, 5G Radio Access Network Architecture also belongs on the bookshelves of network engineers who aim to increase their understanding of the standards and technologies relevant to the NG-RAN architecture.

People all over the globe are experiencing unprecedented and often hazardous situations as environments change at speeds never before experienced. This edited collection proposes that anthropological perspectives on landscape have great potential to address the resulting conundrums. The contributions build on broadly phenomenological, structuralist and multi-species approaches to environmental perception and experience, but they also argue for incorporating political power into analysis alongside dwelling, cosmology and everyday practice. The book's 13 ethnographically rich chapters explore how the material and the conceptual are entangled in and as landscapes, but it also looks at how these processes unfold at many scales in time and space, involving different actors with different powers. Thus it

reaches towards new methodologies and new ways of using anthropology to engage with the sense of crisis concerning environment, movements of people, climate change and other planetary transformations. Dwelling in political landscapes: contemporary anthropological perspectives builds substantially upon anthropological work by Tim Ingold, Anna Tsing and Philippe Descola and on related work beyond, which emphasises the ongoing and open-ended, yet historically conditioned ways in which humans and nonhumans produce the environments they inhabit. In such work, landscapes are understood as the medium and outcome of meaningful life activities, where humans, like other animals, dwell. This means that landscapes are neither social/cultural nor natural, but socio-natural. Protesting against and moving on from the proverbial dualisms of modern, Western and maybe capitalist thought, is only the first step in renewing anthropology's methodology for the current epoch, however. The contributions ask how seemingly disconnected temporal, representational, economic and other systemic dynamics fold back on lived experience that are materialised in landscapes. Foremost through studying how socially valued landscapes become irreversibly disturbed, commodified or subjected to wilful markings or erasures, the book explores a number of approaches to how landscapes are entangled in the ways people gather and organise themselves. Mindful of troubling changes in Earth Systems, all the authors argue from empirics. They show that processes of landscape change are always both habitual and laden with choices. That is, landscape change is political. Undoubtedly, landscape politics is bound up not just in how nature has been imagined, but in long histories of consumption. Today, an alarming quest for raw materials and energy continues to change both political and geological formations. Meanwhile dominant socio-political aspirations mean the exploitation of staggering volumes of cheap resources like fossil fuels in order to sustain economic processes that are as taken-for-granted as they are unsustainable. Like anthropology generally, this book attends to the contextual details buried in such planet-scale pictures. Building on traditional anthropological strengths, many authors consider the details of how the past is brought into the present – or erased from it – in material flows and sensory awareness, as well as in narratives that are explicitly linked to particular landscapes. Colonial identity formation and the different ways that it links with how landscape is viewed and managed (for instance for resource development for a global market), whether in Southern Africa, Israel/Palestine, the Canadian arctic or Indonesia, is a particularly striking example of how to talk about landscape is also to talk about past, present and future. And as the idea that we inhabit the Anthropocene becomes commonplace, the discipline can meaningfully discuss the current era as one of disavowed ruins as well as of poorly understood multispecies relations. To think of landscape as historically produced across multiple scales, does not mean ignoring its sensuous qualities let alone its role in cosmological systems. On the contrary, the analyses in the collection attend to the ways people's movements through the landscape produce it as a material and conceptual resource. Taken together, the book's ethnographic analyses take on board the unprecedented conditions under which people everywhere are having to make sense and forge relationships to the worlds they inhabit. Since landscapes are not what they used to be, neither can anthropology be.

"As with his weekly column, James Montier's Value Investing is a must read for all students of the financial markets. In short order, Montier shreds the 'efficient market hypothesis', elucidates the pertinence of behavioral finance, and explains the crucial difference between investment process and investment outcomes. Montier makes his arguments with clear insight and spirited good humor, and then backs them up with cold hard facts. Buy this book for yourself, and for anyone you know who cares about their capital!" —Seth Klarman, President, The Baupost Group LLC The seductive elegance of classical finance theory is powerful, yet value investing requires that we reject both the precepts of modern portfolio theory (MPT) and pretty much all of its tools and techniques. In this important new book, the highly respected and controversial value investor and behavioural analyst, James Montier explains how value investing is the only tried and tested method of delivering sustainable long-term returns. James shows you why everything you learnt at business school is wrong; how to think properly about valuation and risk; how to avoid the dangers of growth investing; how to be a contrarian; how to short stocks; how to avoid value traps; how to hedge ignorance using cheap insurance. Crucially he also gives real time examples of the principles outlined in the context of the 2008/09 financial crisis. In this book James shares his tried and tested techniques and provides the latest and most cutting edge tools you will need to deploy the value approach successfully. It provides you with the tools to start thinking in a different fashion about the way in which you invest, introducing the ways of over-riding the emotional distractions that will bedevil the pursuit of a value approach and ultimately think and act differently from the herd.

'Natural Resources: Neither Course nor Destiny' brings together a variety of analytical perspectives, ranging from econometric analyses of economic growth to historical studies of successful development experiences in countries with abundant natural resources. The evidence suggests that natural resources are neither a curse nor destiny. Natural resources can actually spur economic development when combined with the accumulation of knowledge for economic innovation. Furthermore, natural resource abundance need not be the only determinant of the structure of trade in developing countries. In fact, the accumulation of knowledge, infrastructure, and the quality of governance all seem to determine not only what countries produce and export, but also how firms and workers produce any good.

Intermediality: the incorporation of digital technology into theatre practice, and the presence of film, television and digital media in contemporary theatre is a significant feature of twentieth-century performance. Presented here for the first time is a major collection of essays, written by the Theatre and Intermediality Research Group of the International Federation for Theatre Research, which assesses intermediality in theatre and performance. The book draws on the history of ideas to present a concept of intermediality as an integration of thoughts and medial processes, and it locates intermediality at the inter-sections situated in-between the performers, the observers and the confluence of media, medial spaces and art forms involved in performance at a particular moment in time. Referencing examples from contemporary theatre, cinema, television, opera, dance and puppet theatre, the book puts forward a thesis that the intermedial is a space where the boundaries soften and we are in-between and within a mixing of space, media and realities, with theatre providing the staging space for intermediality. The book places theatre and performance at the heart of the 'new media' debate and will be of keen interest to students, with clear relevance to undergraduates and post-graduates in Theatre Studies and Film and Media Studies, as well as the theatre research community.
