This new edition is a comprehensive and practical guide to European patent law – a 'ius commune'. The book highlights the areas of consistency and difference between the most influential European patent law jurisdictions: the European Patent Office, England and Wales, France, Germany, and the Netherlands. The book also draws insights from further afield, with contributions from other, very active, patent jurisdictions, including Italy, Sweden, Denmark, and Switzerland.

Uniquely, the book addresses European patent law by subject matter area, assessing the key national and EPO approaches together rather than nation by nation. Each chapter outlines the common ground between the national approaches and provides a guide for the possible application of European patent law in national courts and the UPC in the future. In addition to featuring content on new countries, the second edition includes new chapters dedicated to the substantive aspects of FRAND, declarations, and evidence. There is also an expanded commentary on construction, including common terms used in patent claims. A must-read for anyone working in the field of European patent law. Patents are ubiquitous in contemporary life. Practically everything we use incorporates one or more patented inventions, and recent years have witnessed epic disputes over such matters as the patenting of human genes, the control of smartphone design and technology, the marketing of patented drugs, and the conduct of "patent trolls" accused of generating revenue from nuisance litigation. But what exactly is a patent? Why do governments grant them? Can patents simultaneously encourage new invention, while limiting monopoly and other abuses? In Patent Wars, Thomas Cotter, one of America's leading patent law scholars, offers an accessible, lively, and up-to-date examination of the current state of patent law, showing how patents affect everything from the food we eat to the cars we drive to the devices that entertain and inform us. Beginning with a general overview of

patent law and litigation, the book addresses such issues as the patentability of genes, medical procedures, software, and business methods; the impact of drug patents and international treaties on the price of health care; trolls; and the smartphone wars. Taking into account both the benefits and costs that patents impose on society, Cotter highlights the key issues in current debates and explores what still remains unknown about the effect of patents on innovation. An essential one-volume analysis of the topic, Patent Wars explains why patent laws exist in the first place and how we can make the system better.

"Revelatory, terrifying, but, ultimately, hopeful." -Elizabeth Kolbert, Pulitzer Prize-winning author of THE SIXTH

EXTINCTION From the author of Junkyard Planet, a journey into the surprising afterlives of our former possessions. Downsizing.

Decluttering. Discarding. Sooner or later, all of us are faced with things we no longer need or want. But when we drop our old clothes and other items off at a local donation center, where do they go?

Sometimes across the country-or

even halfway across the world-to people and places who find value in what we leave behind. In Secondhand, journalist Adam Minter takes us on an unexpected adventure into the often-hidden, multibillion-dollar industry of reuse: thrift stores in the American Southwest to vintage shops in Tokyo, flea markets in Southeast Asia to used-goods enterprises in Ghana, and more. Along the way, Minter meets the fascinating people who handle-and profit from-our rising tide of discarded stuff, and asks a pressing question: In a world that craves shiny and new, is there room for it all? Secondhand offers hopeful answers and hard truths. A history of the stuff we've used and a contemplation of why we keep buying more, it also reveals the marketing practices, design failures, and racial prejudices that push used items into landfills instead of new homes. Secondhand shows us that it doesn't have to be this way, and what really needs to change to build

a sustainable future free of excess stuff.
