At the start of every web design project, the ongoing struggles reappear. We want to design highly usable and self-evident applications, but we also want to devise innovative, compelling, and exciting interactions that make waves in the market. Projects are more sophisticated than ever, but we have fewer resources with which to complete them. Requirements are fuzzy at best, but we're expected to have everything done yesterday. What we need is a reuse strategy, coupled with a pathway to innovation. Patterns are part of the game. Components take us further. In *Web Anatomy: Interaction Design Frameworks That Work*, user experience experts Hoekman and Spool introduce "interaction design frameworks", the third and final piece of what they call "The Reuse Trinity", and resolve these issues once and for all. Frameworks are sets of design patterns and other elements that comprise entire systems, and in this game-changing book, Hoekman and Spool show you how to identify, document, share, use, and reap the benefits of frameworks. They also dive deep

into several major frameworks to reveal how the psychology behind these standards leads not only to effective designs, but can also serve as the basis for cutting-edge innovations and superior user experiences. *Web Anatomy* delivers: A complete guide to using interaction design frameworks An examination of the psychology behind major frameworks A thorough look at how frameworks will change the way you work for the better Citing examples from both the successful and not-so-successful, the authors break down the elements that comprise several common interactive web systems, discuss implementation considerations, offer examples of innovations based on these standards, reveal how frameworks work hand in hand with patterns and components, and show you how to integrate frameworks into your process. Read *Web Anatomy* now. Benefit from it for years to come. Jared Spool is a world-renowned design researcher and the founder of UIE.com. Robert Hoekman, Jr. is a veteran user experience specialist and the author of *Designing the Obvious* and

Designing the Moment.

Caroline Webb knows what it means to lose the person you love most. Twenty years ago, her five-year-old daughter, Hayley, was the light of her life, her treasure, her angle. Then came the terrible day when Hayley was kidnapped from her favorite swing. More than a month passed before her burned, lifeless body was found. All that remained was the silence of Caroline's heartache--and her guilt... Now, Caroline has started over with a new husband. She even has another precious daughter, Melinda. She thinks she has put the ghosts of her past behind her. But without warning, those ghosts once again start to echo in the night. Suddenly, Hayley's favorite doll reappears...strange murders rock the Webbs' small town...Caroline even claims she has heard the voice of the little girl she lost all those years ago. Could Hayley still be out there somewhere, somehow? Now a killer waits in the wings--waiting to make Caroline live her worst nightmare yet...

As debates about migrants and refugees reverberate around the world, this book offers an important first-hand account of how migration is being approached at the highest levels of international governance. Whereas refugees have long been protected by international law, migrants have been treated differently, with no international consensus definition and no one international migration system. This all changed in September 2016, when the 193 members of the United Nations unanimously

adopted the New York Declaration on Refugees and Migrants, laying the groundwork for the creation of governance frameworks for migrants and refugees worldwide. This book provides a fly on the wall analysis of the opportunities and challenges of the two new Global Compacts on Refugees and Migration as governments, international NGOs, multilateral institutions and other actors develop and negotiate them. Looking beyond the compacts, the book considers migration governance over time, and asks the bigger questions of what the international community can do on the one hand to affirm and strengthen safe, orderly and regular migration to help drive economic growth and prosperity, whilst on the other hand responding to the problems caused by increasing numbers of refugees and irregular migrants. This highly engaging and informative account will be of interest to policy-makers, academics and students concerned with global migration and refugee governance.

The last decade has seen a growing body of research investigating various aspects of L2 learners' performance of tasks. This book focuses on one task implementation variable: planning. It considers theories of how opportunities to plan a task affect performance and tests claims derived from these theories in a series of empirical studies. The book examines different types of planning (i.e. task rehearsal, pre-task planning and within-task planning), addressing both what learners do when they plan and the effects of the different types of planning on L2 production. The choice of planning as the variable for investigation in this book is motivated both by its importance for current theorizing about L2 acquisition (in particular with regard to cognitive theories that view acquisition in terms of information processing) and its utility to language teachers and language testers, for unlike many other constructs in SLA 'planning' lends itself to external manipulation. The study of planning, then, provides a suitable forum for demonstrating the interconnectedness of theory, research and pedagogy in SLA. An overview of emerging topics, theories, methods, and practices in sonic interactive design, with a focus on the multisensory aspects of sonic experience. Sound is an integral part of every user experience but a neglected medium in design disciplines. Design of an artifact's sonic qualities is often limited to the shaping of functional, representational, and signaling roles of sound. The interdisciplinary field of sonic interaction design (SID) challenges these prevalent approaches by considering sound as an active medium that can enable novel sensory and social experiences through interactive technologies. This book offers an overview of the emerging SID research, discussing theories, methods, and practices, with a focus on the multisensory aspects of sonic experience. Sonic Interaction Design gathers contributions from scholars, artists, and designers working at the intersections of fields ranging from electronic music to cognitive science. They offer both theoretical considerations of key themes and case studies of products and systems created for such contexts as mobile music, sensorimotor learning, rehabilitation, and gaming. The goal is not only to extend the existing research and pedagogical approaches to SID but also to foster domains of practice for sound designers, architects, interaction designers, media artists, product designers, and urban planners. Taken together, the chapters provide a foundation for a still-emerging field, affording a new generation of designers a fresh perspective on interactive sound as a situated and multisensory experience. Rose is a princess, a Cinder, and half-human. She is the last one born of her kind, and on her twenty-first birthday, she must enter the woods and travel to find her Prince, as her sisters did before her. ". . . And we will all dance at the Grand Ball," her sisters would always say. But the Human servants are keeping a

secret that could prevent the Cinders from reaching their Happily Ever After....Hidden in Rose's dreams and vision are the answers of the past between Cinders and Humans, and she is quickly running out of time trying to solve their hidden messages. She knows the answer lies in her first clue--identifying an animal she has never seen before--that persistent vision of a furry white animal, holding a gold metal object and exclaiming, "Oh dear! Oh dear! I shall be too late!"

Consider a monopolist in one market that faces competition in a second market. Bundled loyalty discounts, in which customers receive a price break on the monopoly good in exchange for making all purchases from the monopolist, have ambiguous welfare effects. To analyze such discounts as predatory pricing is incorrect. In some settings, they act as tie-in sales. Existing tests for whether such discounts violate Section 2 of the Sherman Act do not track changes in consumer surplus or total surplus. We present a new test and use it in an illustrative example based on SmithKline that assumes the "tied" market is a homogeneous good. If the tied market is characterized by Hotelling competition, bundling by the

monopolist causes the rival firm to reduce its price. In numerical examples, we find that this can deter entry or induce exit.

For the past decade, humanitarian actors have increasingly sought not only to assist people affected by conflicts and natural disasters, but also to protect them. At the same time, protection of civilians has become central to UN peacekeeping operations, and the UN General Assembly has endorsed the principle that the international community has the "responsibility to protect" people when their governments cannot or will not do so. Elizabeth Ferris explores the evolution of the international community's understandings of protection, with a particular emphasis on the humanitarian community. "Protection" is a noble word, with positive connotations, but what does it actually mean in practice? Does providing assistance to vulnerable people protect them, for example? Does monitoring the number of rapes protect women? Does increased engagement in protection activities by humanitarian agencies jeopardize the cornerstone humanitarian principles of neutrality and impartiality? In *The Politics of Protection*, Ferris examines inconsistent ways in which protection is defined and applied. For example, why do certain groups receive international protection while other equally needy groups do not? Her case studies, ranging from Iraq to Katrina, illustrate the challenges—and limitations—of protecting vulnerable populations from the ravages of war and natural disasters. Ferris argues that the

protection paradigms currently in use are inadequate to meet the challenges of the future, such as climate change, protracted displacement, and the changing nature of warfare.
