The magic of search engines starts with crawling. While at first glance Web crawling may appear to be merely an application of breadth-first-search, the truth is that there are many challenges ranging from systems concerns such as managing very large data structures to theoretical questions such as how often to revisit evolving content sources. Web Crawling outlines the key scientific and practical challenges, describes the state-of-the-

art models and solutions, and highlights avenues for future work. Web Crawling is intended for anyone who wishes to understand or develop crawler software, or conduct research related to crawling.

Practical Software Architecture Solutions from the Legendary Robert C. Martin ("Uncle Bob") By applying universal rules of software architecture, you can dramatically improve developer productivity throughout the life of any software system. Now, building upon the success of his best-selling books Clean Code and The Clean Coder, legendary software craftsman Robert C. Martin ("Uncle Bob") reveals those

rules and helps you apply them. Martin's Clean Architecture doesn't merely present options. Drawing on over a half-century of experience in software environments of every imaginable type, Martin tells you what choices to make and why they are critical to your success. As you've come to expect from Uncle Bob, this book is packed with direct, no-nonsense solutions for the real challenges you'll face—the ones that will make or break your projects. Learn what software architects need to achieve—and core disciplines and practices for achieving it Master essential software design principles for addressing function, component separation, and data management See how programming paradigms impose

discipline by restricting what developers can do. Understand what's critically important and what's merely a "detail." Implement optimal, high-level structures for web, database, thick-client, console, and embedded applications. Define appropriate boundaries and layers, and organize components and services. See why designs and architectures go wrong, and how to prevent (or fix) these failures. Clean Architecture is essential reading for every current or aspiring software architect, systems analyst, system designer, and software manager—and for every programmer who must execute someone else's designs. This book provides a practical, comprehensive and up-to-date overview of the use of spatial statistics in epidemiology - the study of the incidence and distribution of diseases. Used appropriately, spatial analytical methods in conjunction with GIS and remotely sensed data can provide significant insights into the biological patterns and processes that underlie disease transmission. In turn, these can be used to understand and predict disease prevalence. This user-friendly text brings together the specialised and widely-dispersed literature on spatial analysis to make these methodological tools accessible to epidemiologists for the first time. With its focus is on application rather than theory, *Spatial Analysis in Epidemiology* includes a wide range of examples taken from both medical (human) and veterinary (animal) disciplines, and describes both infectious diseases and non-infectious conditions. Furthermore, it provides worked examples of methodologies using a single data set from the same disease example throughout, and is structured to follow the logical sequence of

description of spatial data, visualisation, exploration, modelling and decision support. This accessible text is aimed at graduate students and researchers dealing with spatial data in the fields of epidemiology (both medical and veterinary), ecology, zoology and parasitology, environmental science, geography and statistics.

This volume contains a series of papers originally presented at the symposium on Water Soluble Polymers: Solution Properties and Applications, sponsored by the Division of Colloids and Surface Chemistry of the American Chemical Society. The symposium took place in Las Vegas City, Nevada on 9 to 11th September, 1997 at the 214th American Chemical Society National Meeting. Recognized experts in their respective fields were invited to speak. There was a strong attendance from academia, government, and industrial research

centers. The purpose of the symposium was to present and discuss recent developments in the solution properties of water soluble polymers and their applications in aqueous systems. Water soluble polymers find applications in a number of fields of which the following may be worth mentioning: cosmetics, detergent, oral care, industrial water treatment, g- thermal, wastewater treatment, water purification and reuse, pulp and paper production, sugar refining, and many more. Moreover, water soluble polymers play vital role in the oil industry, especially in enhanced oil recovery. Water soluble polymers are also used in ag- culture and controlled release pharmaceutical applications. Therefore, a fundamental knowledge of solution properties of these polymers is essential for most industrial scientists. An understanding of the basic phenomena involved in the application of these polymers, such as adsorption and interaction with different substrates (i. e. , tooth enamel, hair, reverse osmosis membrane, heat exchanger surfaces,

etc.) is of vital importance in developing high performance formulations for achieving optimum efficiency of the system.

Handbook of Augmented Reality Newnes

There is considerable and growing interest in professionals learning across their working lives. The growth in this interest is likely premised upon the increasing percentage of those who are being employed under the designation as professionals or para-professional workers in advanced industrial economies. Part of being designated in this way is a requirement to be able to work autonomously and in a relatively self-regulated manner. Of course, many other kinds of employment also demand such behaviours. However, there is particular attention being given to the ongoing development of workers who are seen to make crucial decisions and take actions about health, legal and financial matters. Part of this attention derives from expectations within the community that those who are granted relative autonomy and are often paid handsomely should be current and informed in their decision-making. Then, like all other workers, professionals are required to maintain their competence in the

face of changing requirements for work. Consequently, a volume that seeks to inform how best this ongoing learning can be understood, supported and assisted is most timely and welcomed. This volume seeks to elaborate professional learning through a consideration of the concept of authentic professional learning. What is proposed here is that, in contrast to programmatic approaches towards professional development, the process of continuing professional learning is a personal, complex and diverse process that does not lend itself to easy prescription or the realisation of others' intents.

Water Soluble Polymers Now Publishers Inc
In the United States, approximately 14 million people have had cancer and more than 1.6 million new cases are diagnosed each year. However, more than a decade after the Institute of Medicine (IOM) first studied the quality of cancer care, the barriers to achieving excellent care for all cancer patients remain daunting. Care often is not patient-centered, many patients do not receive palliative care to manage their symptoms and side effects from treatment, and decisions about care often are not based on the latest scientific evidence. The cost of cancer care also is rising faster than many sectors of medicine--having increased to \$125 billion in 2010 from \$72 billion in 2004--and is projected to reach \$173 billion by 2020. Rising costs are making cancer care less affordable for patients and their families and

are creating disparities in patients' access to high-quality cancer care. There also are growing shortages of health professionals skilled in providing cancer care, and the number of adults age 65 and older--the group most susceptible to cancer--is expected to double by 2030, contributing to a 45 percent increase in the number of people developing cancer. The current care delivery system is poorly prepared to address the care needs of this population, which are complex due to altered physiology, functional and cognitive impairment, multiple coexisting diseases, increased side effects from treatment, and greater need for social support. Delivering High-Quality Cancer Care: Charting a New Course for a System in Crisis presents a conceptual framework for improving the quality of cancer care. This study proposes improvements to six interconnected components of care: (1) engaged patients; (2) an adequately staffed, trained, and coordinated workforce; (3) evidence-based care; (4) learning health care information technology (IT); (5) translation of evidence into clinical practice, quality measurement and performance improvement; and (6) accessible and affordable care. This report recommends changes across the board in these areas to improve the quality of care. Delivering High-Quality Cancer Care: Charting a New Course for a System in Crisis provides information for cancer care teams, patients and their families, researchers, quality metrics developers, and payers, as well as HHS, other federal agencies, and industry to reevaluate their current roles and responsibilities in cancer care and work together to develop a higher quality care delivery system. By working toward this shared goal, the cancer care

community can improve the quality of life and outcomes for people facing a cancer diagnosis.

Improving Schools with Blended Learning is specifically designed to address the important issues needed to successfully modernise education within the context of technological change. It does this by first providing a clear roadmap for designing Blended Learning environments able to respond to the technological imperatives challenging schools at present, and then illustrating this roadmap via specific, original research that details the 'how to' aspects of a successful technology-based design process. School leaders, teachers,

teacher education students and researchers will all find highly relevant information about how to manage for disruption in the new and informative approach to Blended Learning (BL) they will discover in this book. This book arose from two different research projects the authors have been pursuing over the last 3-5 years, including school improvement research and Blended Learning research designed to investigate the role of technology in effective teaching and learning. By combining the insights gained from these two different research areas, this book is able to present a novel understanding of BL that is both insightful and clearly evidence-based. Improving Schools with Blended Learning also provides several original contributions to specific knowledge in the areas of BL and school improvement that most educators will

find highly useful, including the use of BL schemas, a clear and extended BL continuum, how to measure and evaluate the success of BL, how to scaffold teacher ICT knowledge and skills, and a specific process for contextualising applied BL in relation to the 'disruption' imperatives of the Knowledge Economy.
