Many influential stances within the social sciences regard nature in one of two ways: either as none of their concern (which is with the social and cultural aspects of human existence), or as wholly a social and cultural fabrication. But there is also another strand of social scientific thinking that seeks to understand the interplay between social and cultural factors on one side and natural factors on the other. These volumes contain the main contributions that have been made within each of these streams of thought. The selections

illustrate to the reader the complexity of the various positions within these streams, and the strengths and limitations of each perspective. A new introduction places these articles in their historical and intellectual context and the volumes are completed with an extensive index and chronological table of contents.

This book is a focussed treatment of a famine both as an 'event' and a 'process'. It is a close-up of a peasant economy in the throes of a crisis which temporarily eroded the value-system determining the normal pattern of entitlements. An investigation of the socio-economic, ecological and cultural determinants of the famine helps evolve a coherent framework. The emphasis is on the distinctive problems of the various economic regions, most notably the tribal belts. Chakrabarti applies Amartya Sen's theory of exchange entitlements to a nineteenth century famine situation in Bengal, and

finds that a market-based entitlement failure precipitating severe famine conditions, even without receiving any impulse from food production, has little relevance here. Though the book underlines the predicament of the subalterns, the famine is not seen from the viewpoint of any specific group or community. The focus is, rather, on the phenomenon of famine in its totality--on the agony and trauma of a peasant society thrown out of gear in an abnormal situation, and the crisis of identities that ensued.

This text brings together studies in various aspects of the theory of the capitalist economy. It focuses on major themes of the Marxist tradition that postulate the existence and importance of social relations and

structures underlying the esoteric realm of economic categories: prices, profits, wages, etc. The author takes a reappraising, critical look at the concepts of the deep structure - value, exploitation, immanent crisis - using the analytical tools of modern economics to improve those concepts. The book is divided into four parts. Part 1 explores the essential nature of capitalism, re-examining problems in the theory of value and exploitation. Part 2 tackles the issue of capitalism-specific paths of growth and technical change, putting forward a rigorous theory of biased technical change and non-steady-state growth. Part 3 examines the cyclical character of capitalist growth and the theory of crises. Finally, Part 4 places capitalism in the wider framework of modes of production, considering the theory of precapitalist formations and aspects of the theory and practical experience of socialism. The guiding theme is the combination, or confrontation, of rigorous, quantitative analytical techniques with equally demanding qualitative and political-economic conceptualization. The book's premise is that this interface is essential to a progressive yet distinctively Marxist social theory.
