"The fourth edition of *Elements of Chemical Reaction Engineering* is a completely revised version of the book. It combines authoritative coverage of the principles of chemical reaction engineering with an unsurpassed focus on critical thinking and creative problem solving, employing open-ended

questions and stressing the Socratic method. Clear and organized, it integrates text, visuals, and computer simulations to help readers solve even the most challenging problems through reasoning, rather than by memorizing equations."--BOOK JACKET.

The Antibody Molecule reviews the literature leading to current knowledge of the structure of immunoglobulins. The book begins by outlining some of the basic structural characteristics of immunoglobulins without citing the references on which the

information is based. Separate chapters follow covering the chemical nature of the active site of an antibody molecule and mechanisms of interaction with hapten; the general structural features and properties of the various classes of human immunoglobulin; and amino acid sequences of human and mouse L chains and of human and rabbit H chains. Subsequent chapters deal with the evolution of the immunoglobulin classes; special properties of mouse, guinea pig, rabbit, and horse immunoglobulins; idiotypic specificities of immunoglobulins; and the genetic control of antibodies. This book is meant for immunologists who have

not personally observed the development of this exciting period in the history of immunology. It will also provide useful supplemental reading for the serious student or investigator who wishes to become familiar with the nature of the antibody molecule, its genetic control, and mode of action.

This volume forms a part of the Critical Discourses in South Asia series which deals with schools, movements, and discursive practices in major South Asian languages. It offers crucial insights into the making of Bengali or Bangla literature and its critical tradition across a century. The book brings together English translation of major writings of influential figures dealing with literary criticism and theory, aesthetic and performative traditions, and reinterpretations of primary concepts and categories in Bangla. It presents 32 key texts in literary and cultural studies from Bengal from the middle of the 19th to that of the 20th century, with most of them translated for the first time into English. These seminal essays are linked with

socio-historical events and phenomena in the colonial and post-independence period in Bengal, including the background to the Language Movement in Bangladesh. They discuss themes such as integrative aesthetic visions, poetic and literary forms, modernism, imagination, power structures and social struggles, ideological values, cultural renovations, and humanism. Comprehensive and authoritative, this volume offers an overview of the history of critical thought in Bangla literature in South Asia. It will be essential for scholars and researchers of Bengali/Bangla language and literature, literary criticism, literary theory, comparative literature, Indian literature, cultural studies, art and aesthetics, performance studies, history, sociology, regional studies, and South Asian studies. It will also interest the Bengali-speaking diaspora and those working on the intellectual history of Bengal and conservation of languages and culture

This text covers the field of steady-state kinetics from basic principles to the control of the multi-enzyme systems which constitute metabolic pathways. Emphasis is placed on the interpretation of the kinetic behaviour of enzyme-catalyzed reactions in terms of mechanisms. Algorithms are developed which can be implemented in computer programs for the derivation of equations. The treatment of steady-state enzyme kinetics is extended to allosteric enzymes and subunit interactions in polymeric enzymes. Principles are presented which provide for mathematical analysis of the control of multi-enzyme systems. Problems are included at the end of each chapter and their solutions are found at the end of the book. This book will be a useful

text for advanced undergraduates and graduate students taking courses in enzyme chemistry and enzyme kinetics.

Western missionaries contributed largely to Chinese lexicography. Their involvement was basically a practical rather than a theoretical one. In order to preach and convert, it was necessary to speak Chinese. A missionary on post needed to learn at least two languages, the national Guanhua, the "language of the officials" or "Mandarin," and the local vernacular. The first lexicographical work by missionaries was a Portuguese-Chinese dictionary compiled in the late 1500s by Francisco Varo (1627-1687), a Spanish Dominican based in the province of Fujian, was legendary for his superb mastery in Mandarin. His Vocabulario de la Lengua Mandarina, a Spanish-Chinese dictionary, is made available to modern readers in the present study, which is based on two manuscripts held in Berlin and London. Volume 1 contains the text of Varo's glossary, with English translations offered for all Spanish glosses and Chinese characters

added for all Chinese forms. Volume 2 includes a pinyin index to all Chinese forms in the text and a selective index to the English translations of the Chinese glosses. The Vocabulario is mainly devoted to the spoken language, but includes literary forms as well. Varo was also sensitive to other matters of usage, e.g., questions of style, new expressions coined by the missionaries, specific expressions in Chinese and in European culture, Chinese customs and beliefs, and aspects of grammar. The Vocabulario is recommended for readers interested in Chinese linguistics, lexicography, Sino-Western cultural relations and the history of Christianity in China.

The 6th Battalion, The Manchester Regiment, was a prewar Territorial unit. Many of its members held "white collar" positions employed by the City's legal, financial and stockbroking practices or worked for the major commercial organizations trading and manufacturing cotton goods. It went overseas in September 1914, taking with it many new recruits who would undertake their basic training whilst the Battalion formed part of the British garrison in Egypt. It saw action at Gallipoli from May 1915 until the evacuation at the end of the year and fascinating campaign is dealt with in considerable detail. The Battalion returned to Egypt until the spring of 1917 when it moved to France. The Manchesters saw regular action for most of 1918, coming under attack in the German offensive in March. Throughout the summer and autumn, the Battalion took part in the Advance to Victory and was still advancing when the Armistice was signed in November. The book also recounts the history of the second line battalion, the 2/6th Manchesters, from its inception in 1914 until it was all but destroyed in March 1918. The author draws on official records and personal accounts to tell the story of these fine battalions.

Although Arctic explorer and Hudson Bay Company surveyor John Rae (1813-1893) travelled and recorded the final uncharted sections of the Northwest Passage, he is best known for his controversial discovery of the fate of the lost Franklin Expedition of 1845. Based on evidence given to him by local Inuit, Rae determined that Franklin's crew had resorted to cannibalism in their final, desperate days. Seen as maligning a national hero, Rae was shunned by British society. This collection of personal correspondence—reissued here for the first time since its original publication in 1953—illuminates the details of Rae's expeditions through his own words. The letters offer a glimpse into Rae's daily life, his ideas, musings, and troubles. Prefaced by the original, thorough introduction detailing his early life, John Rae's Arctic

Correspondence is a crucial resource for any Arctic enthusiast. This new edition features a foreword by researcher and Arctic enthusiast Ken McGoogan, the award-winning author of eleven books, including *Fatal Passage: The Untold Story of John Rae* (HarperCollins, 2002).
