This volume presents a study of the central and lower Medway valley during the 1st millennium AD, focussing on the 1962 – 1976 excavation of the Eccles Roman villa and Anglo-Saxon cemetery directed by Alex Detsicas. The author gives an account of the long history of the villa, and a reassessment of the architectural evidence which Detsicas presented.

The 6th Battalion, The Manchester Regiment, was a prewar Territorial unit. Many of its members held white collar positions employed by the City's legal, financial and stockbroking practices or worked for the major commercial organizations trading and manufacturing cotton goods. It went overseas in September 1914, taking with it many new recruits

who would undertake their basic training whilst the Battalion formed part of the British garrison in Egypt. It saw action at Gallipoli from May 1915 until the evacuation at the end of the year and the fascinating campaign is dealt with in considerable detail. The Battalion returned to Egypt until the spring of 1917 when it moved to France. The Manchesters saw regular action for most of 1918, coming under attack in the German offensive in March. Throughout the summer and autumn, the Battalion took part in the Advance to Victory and was still advancing when the Armistice was signed in November. The book also recounts the history of the second line battalion, the 2/6th Manchesters, from its inception in 1914 until it was all but destroyed in March 1918. The author draws on official records and personal accounts to tell the story of these fine battalions.

I was asked to introduce this volume by examining "why a knowledge of ecosystem functioning can contribute to understanding species activities, dynamics, and assemblages." I have found it surprisingly difficult to address this topic. On the one hand, the answer is very simple and general: because all species live in ecosystems, they are part of and dependent on ecosystem processes. It is impossible to understand the abundance and distribution of populations and the species diversity and composition of communities without a knowledge of their abiotic and biotic environments and of the fluxes of energy and matter through the ecosystems of which they are a part. But everyone knows this. It is what ecology is all about (e.g., Likens, 1992). It is why the discipline has retained its integrity and thrived, despite a sometimes

distressing degree of bickering and chauvinism among its various subdisciplines: physiological, behavioral, population, community, and ecosystem ecology.

This text covers the field of steady-state kinetics from basic principles to the control of the multi-enzyme systems which constitute metabolic pathways. Emphasis is placed on the interpretation of the kinetic behaviour of enzyme-catalyzed reactions in terms of mechanisms. Algorithms are developed which can be implemented in computer programs for the derivation of equations. The treatment of steady-state enzyme kinetics is extended to allosteric enzymes and subunit interactions in polymeric enzymes. Principles are presented which provide for mathematical analysis of the control of multi-enzyme systems. Problems are included at the end of each chapter and their solutions are found at the end of the book. This book will be a useful text for advanced undergraduates and graduate students taking courses in enzyme chemistry and enzyme kinetics.

Given the widespread interest in macroscopic phenomena in liquid crystals, stemming from their applications in displays and devices. The need has arisen for a rigorous yet accessible text suitable for graduate students, whatever their scientific background. This book satisfies that need. The approach taken in this text, is to introduce the basic continuum theory for nematic liquid crystals in equilibria, then it proceeds to simple application of this theory- in particular, there is a discussion of electrical and magnetic field effects which give rise to Fredericksz transitions, which are important in devices. This is followed by an account of dynamic theory and elementary viscometry of nematics. Discussions of backflow and flow-induced instabilities are also included. Smectic theory is also briefly introduced and summarised with some examples of equilibrium solutions as well as those with dynamic effects. A number of mathematical techniques, such as

Cartesian tensors and some variational calculus, are presented in the appendices.

Dynamic Games: Theory and Applications Routledge

This volume includes chapters presenting applications of different metaheuristics in reliability engineering, including ant colony optimization, great deluge algorithm, cross-entropy method and particle swarm optimization. It also presents chapters devoted to cellular automata and support vector machines, and applications of artificial neural networks, a powerful adaptive technique that can be used for learning, prediction and optimization. Several chapters describe aspects of imprecise reliability and applications of fuzzy and vague set theory.

This list is set out in two sections: The Royal Navy with the Navies of the Empire and the Royal Marines; and The Royal Naval Air Service, Royal Flying Corps and Royal Air Force. As with the other volumes in the series date and place of death are given with place of burial or commemoration. This volume breaks new ground by recording the deaths and burial sites of other ranks, and extending the date of research to 1921. The title is not exactly right since it makes no mention of Warrant Officers who are included in the lists.

This volume forms a part of the Critical Discourses in South Asia series which deals with schools, movements, and discursive practices in major South Asian languages. It offers crucial insights into the making of Bengali or Bangla literature and its critical tradition across a century. The book brings together English translation of major writings of influential figures dealing with literary criticism and theory, aesthetic and performative traditions, and reinterpretations of primary concepts and categories in Bangla. It presents 32 key texts in literary and cultural studies from Bengal from the middle of the 19th to that of the 20th century, with most of them translated for the first time into English. These seminal essays are linked with socio-historical events and phenomena in the colonial and post-independence period in Bengal, including the background to the Language Movement in Bangladesh. They discuss themes such as integrative aesthetic visions, poetic and literary forms, modernism, imagination, power structures and social struggles, ideological values, cultural renovations, and humanism. Comprehensive and authoritative, this volume offers an overview of the history of critical thought in Bangla literature in South Asia. It will be essential for scholars and researchers of Bengali/Bangla language and

literature, literary criticism, literary theory, comparative literature, Indian literature, cultural studies, art and aesthetics, performance studies, history, sociology, regional studies, and South Asian studies. It will also interest the Bengali-speaking diaspora and those working on the intellectual history of Bengal and conservation of languages and culture

Dynamic games continue to attract strong interest from researchers interested in modelling competitive as well as conflict situations exhibiting an intertemporal aspect. Applications of dynamic games have proven to be a suitable methodology to study the behaviour of players (decision-makers) and to predict the outcome of such situations in many areas including engineering, economics, management science, military, biology and political science. *Dynamic Games: Theory and Applications* collects thirteen articles written by established researchers. It is an excellent reference for researchers and graduate students covering a wide range of emerging and revisited problems in both cooperative and non-cooperative games in different areas of applications, especially in economics and management science.

The political analysis of organisations has gained increasing significance in the last 10 years. In the Anglo-American research in particular the most significant and up-to-date questions from the broad research field of Organizational Politics, have been taken up and examined from a scientific perspective that is

essentially empirical. Much attention has been paid to the phenomena of power, the generation and handling of conflict in organisations (with emphasis on the managerial viewpoint), as well as to industrial conflict as a conflict between employers and trade unions. Interesting research results have been achieved in these areas, which can also be found in the German literature. Despite this progress, no consensus can yet be traced in the existing literature upon the definition of the object of research, the problem formulation and the research goal. In view of the different perspectives of the object of research that exist, the integration of multiple research results presents difficulties: the advantage of cooperative, particularly international research results cannot be exploited to the full, and as a result of the absence of a complete research "road map", gaps in the research are discovered more by chance, rather than being identified and elaborated systematically. Furthermore, the economic problems of power, conflict and conflict-handling, which are of great significance for business corporations have received surprisingly little attention. Another weakness is the rather loose relationship that exists with Political Science, which provides important impetus, but which is as yet insufficiently used as a permanent corresponding discipline. *Journal of the North China Branch of the Royal Asiatic Society Marine Corps Association*

Environmental Organic Chemistry focuses on environmental factors that govern the processes that determine the fate of organic chemicals in natural and engineered systems. The information discovered is then applied to quantitatively assessing the environmental behaviour of organic chemicals.

Now in its 2nd edition this book takes a more holistic view on physical-chemical properties of organic compounds. It includes new topics that address aspects of gas/solid partitioning, bioaccumulation, and transformations in the atmosphere. Structures chapters into basic and sophisticated sections Contains illustrative examples, problems and case studies Examines the fundamental aspects of organic, physical and inorganic chemistry - applied to environmentally relevant problems Addresses problems and case studies in one volume

Taiwan (Formosa) Shinchiku Province Springer Science & Business Media Basin Analysis: Quantitative Methods, Volume 1 discusses the problems of quantitative basin analysis in relation to oil accumulations. This book explains the three primary factors that contribute to oil occurrences.

Organized into 11 chapters, this volume starts with an overview of the quantitative methods of reconstructing the burial history of sedimentary material in basins. This text then explores the problem of quantitative reconstruction of the thermal history of sedimentary basins based on both inversion of thermal indicator data and on model-derived heat fluxes. Other

chapters integrate the hydrocarbon generation, accumulation, and migration modeling aspects with the burial history and thermal history. This book discusses as well the repercussions of various hydrocarbon models for oil accumulation sites. The final chapter shows how both thermal information and burial history can be combined to determine emplacement, timing, and erosion of geological events. Professional geologists, geophysicists, and petroleum exploration scientist will find this book useful.

Western missionaries contributed largely to Chinese lexicography. Their involvement was basically a practical rather than a theoretical one. In order to preach and convert, it was necessary to speak Chinese. A missionary on post needed to learn at least two languages, the national Guanhua, the "language of the officials" or "Mandarin," and the local vernacular. The first lexicographical work by missionaries was a Portuguese-Chinese dictionary compiled in the late 1500s by Francisco Varo (1627-1687), a Spanish Dominican based in the province of Fujian, was legendary for his superb mastery in Mandarin. His Vocabulario de la Lengua Mandarina, a Spanish-Chinese dictionary, is made available to modern readers in the present study, which is based on two manuscripts held in Berlin and London. Volume 1 contains the text of Varo's glossary, with English translations offered for all Spanish glosses and Chinese characters added for all Chinese forms. Volume 2 includes a pinyin index to all Chinese forms in the text and a selective index to the English translations of the Chinese glosses. The Vocabulario is mainly devoted to the spoken language, but includes literary forms as well. Varo was also sensitive to other

matters of usage, e.g., questions of style, new expressions coined by the missionaries, specific expressions in Chinese and in European culture, Chinese customs and beliefs, and aspects of grammar. The *Vocabulario* is recommended for readers interested in Chinese linguistics, lexicography, Sino-Western cultural relations and the history of Christianity in China.
