Bullying is now widely  
recognised as a serious  
problem that affects  
many children in schools.  
It can take many forms,

---

including direct verbal and physical harassment and indirect forms such as deliberate exclusion and the targeting of individuals using cyber technology. Continual and severe bullying can cause both short term and long term damage, making it difficult for victims to form intimate relationships with others and for habitual bullies to avoid following a delinquent lifestyle and becoming perpetrators of domestic violence. Even though this type of abuse affects many of our school children, Ken Rigby believes there are grounds for optimism. This passionate and motivating book shows that there are ways of reducing the likelihood of bullying occurring in a school and effective ways of tackling cases when they do occur. Using up-to-date studies, *Bullying in Schools* helps us to understand the nature of bullying and why it so often takes place in schools. Importantly, it examines and evaluates what schools can do to promote more positive peer relationships within the school community and take effective and sustainable action to deal with problems that may arise. Teachers, parents, school leaders, policy makers, and health professionals will find it invaluable and empowering.

Combustion has played a central role in the development of our

civilization which it maintains today as its predominant source of energy. The aim of this book is to provide an understanding of both fundamental and applied aspects of low-temperature combustion chemistry and autoignition. The topic is rooted in classical observational science and has grown, through an increasing understanding of the linkage of the phenomenology to coupled chemical reactions, to quite profound advances in the chemical kinetics of both complex and elementary reactions. The driving force has been both the intrinsic interest of an old and intriguing phenomenon and the centrality of its applications to our economic prosperity. The volume

---

provides a coherent view of the subject while, at the same time, each chapter is self-contained.

Environmental Organic Chemistry focuses on environmental factors that govern the processes that determine the fate of organic chemicals in natural and engineered systems. The information discovered is then applied to quantitatively assessing the environmental behaviour of organic chemicals. Now in its 2nd edition this book takes a more holistic view on physical-chemical properties of organic compounds. It includes new topics that address aspects of gas/solid partitioning, bioaccumulation, and transformations in the atmosphere. Structures chapters into basic and sophisticated sections Contains illustrative examples, problems and case studies Examines the

fundamental aspects of organic, physical and inorganic chemistry - applied to environmentally relevant problems Addresses problems and case studies in one volume

As Malaysia's economy grows and flourishes, strong new links are being forged with other developing countries in the region and beyond. This book traces the ways in which age-old organizational, political, religious and trade networks between Nusantara, the Malay World, and Central Asia, East Africa and the Middle East have changed in recent years. The book argues that these old links are being revived by new forms of globalization, modernization and knowledge transfer that are developing and implementing non-western models of governance, often in direct reference to Islam. The book goes on to explain how, as Malaysia develops new links with Indian

Ocean countries, many of them Muslim countries, a new style trading network is being formed, a network with Islamic characteristics, which echoes Indian Ocean Islamic trading networks of earlier times. Interspersed with interesting methodological insights into the latest network, transnational and spatial theories, the book provides detailed case studies of Malaysia's and Southeast Asia's trade and numerous other links with Indonesia, Egypt, Zanzibar, Comoros and Central Asia, and concludes by assessing how Malaysia's and ASEAN's new style network is likely to develop and influence wider global networks. Written with a depth of

knowledge reflective of the author's many years of research throughout Asia, this book gives a real insight into how Malaysia's mentalities, traditions and ways of thinking are being applied to its interactions with its immediate neighbours and the wider world.

In the spring of 1972, North Vietnam invaded South Vietnam in what became known as the Easter Offensive. Almost all of the American forces had already

---

withdrawn from Vietnam except for a small group of American advisers to the South Vietnamese armed forces. The 23rd ARVN Infantry Division and its American advisers were sent to defend the provincial capital of Kontum in the Central Highlands. They were surrounded and attacked by three enemy divisions with heavy artillery and tanks but, with the help of air power, managed to successfully defend Kontum and prevent South Vietnam from being cut in half and

defeated. Although much has been written about the Vietnam War, little of it addresses either the Easter Offensive or the Battle of Kontum. In *Kontum: The Battle to Save South Vietnam*, Thomas P. McKenna fills this gap, offering the only in-depth account available of this violent engagement. McKenna, a U.S. infantry lieutenant colonel assigned as a military adviser to the 23rd Division, participated in the battle of Kontum and combines his personal

experiences with years of interviews and research from primary sources to describe the events leading up to the invasion and the battle itself. *Kontum* sheds new light on the actions of U.S. advisers in combat during the Vietnam War. McKenna's book is not only an essential historical resource for America's most controversial war but a personal story of valor and survival.

Western missionaries contributed largely to Chinese lexicography. Their involvement was basically a practical rather than a

theoretical one. In order to preach and convert, it was necessary to speak Chinese. A missionary on post needed to learn at least two languages, the national Guanhua, the "language of the officials" or "Mandarin," and the local vernacular. The first lexicographical work by missionaries was a Portuguese-Chinese dictionary compiled in the late 1500s by Francisco Varo (1627-1687), a Spanish Dominican based in the province of Fujian, was legendary for his superb

---

mastery in Mandarin. His *Vocabulario de la Lengua Mandarina*, a Spanish-Chinese dictionary, is made available to modern readers in the present study, which is based on two manuscripts held in Berlin and London. Volume 1 contains the text of Varo's glossary, with English translations offered for all Spanish glosses and Chinese characters added for all Chinese forms. Volume 2 includes a pinyin index to all Chinese forms in the text and a selective index to the English translations of the

Chinese glosses. The *Vocabulario* is mainly devoted to the spoken language, but includes literary forms as well. Varo was also sensitive to other matters of usage, e.g., questions of style, new expressions coined by the missionaries, specific expressions in Chinese and in European culture, Chinese customs and beliefs, and aspects of grammar. The *Vocabulario* is recommended for readers interested in Chinese linguistics, lexicography, Sino-Western

cultural relations and the history of Christianity in China.

The authors perceive a trend in the study and practice of groundwater hydrology. They see a science that is emerging from its geological roots and its early hydraulic applications into a full-fledged environmental science. They see a science that is becoming more interdisciplinary in nature

and of greater importance in the affairs of man. This book is their response, and they have provided a text that is suited to the study of groundwater during this period of emergence.
