An All in One Guide to Master your Nikon D850 The Nikon D850 is a high resolution full-frame DSLR, boasting a 46MP backside-illuminated CMOS sensor. But, in a fairly radical

departure for the series, it is also one of the company's fastest-shooting DSLRs. This combination of properties should significantly widen the camera's appeal to high-end enthusiasts as well as a broad range of professional photographers. The use of a backside illuminated (BSI) sensor means that the light collecting elements of the sensor are closer to the surface of the chip. This should not only increase the efficiency

of the sensor (improving low light performance) but should also be expected to make the pixels near the edges of the sensor better able to accept light approaching with high angles of incidence, improving peripheral image quality. Taking the perfect shot requires more than just years of experience and good lighting! entity is located Shinagawa in Tokyo, Japan and is believed, as at March 2011, to have approximately 25,000 members of staff in its global employ. The corporation, when first established, was a combination of three of Japan's leading optical manufactures. It was first known as Nippon Kogyo Kabushiki gaisha or

Japan Optical Industries Corporation. Name changes followed in 1946 to Nikon and later to the Nikon Corporation in 1988, after the creation and release of its small-sized cameras. Intending to dominate the market from its foundation, the corporation initiated the engineering of optical glass in 1918, marketed its MIKRON 4x and 6x binoculars in 1921 and its JOICO microscope shortly thereafter in 1925. The JOICO was the first ever developed telescope by Nikon and bears the name of the company's first initials. In 1932, the brand name NIKKOR was adopted for the cameras lenses being designed and released globally. The development of cameras followed shortly thereafter with the release of its first small-sized camera; named the Nikon Model 1 in 1948. The company continued its growth; being listed on the Tokyo and Osaka stock exchanges in 1949 and being lauded by the New York Times for its impressive

Nikon cameras and NIKKOR lenses in 1950. This global introduction later resulted in the establishment of a NIKKOR club in 152 and the Nikon Optical Co. Inc.; now using the named Nippon Kogaku (U.S.A) Inc. in the United States in 1953. Nikon divisions were later established in Switzerland, the Netherlands,

Canada, China, Poland, Thailand, Dubai, Brazil and the United Kingdom; extending the reach of this innovative company. Since its inception, almost a century ago, Nikon continues to revolutionize the field and is now responsible for the production of imaging and optical products globally. **Canon EOS 90D User Manual** Conceptual
