This IBM® Redpaper Redbooks publication provides guidance about a backup and recovery solution for SAP High-performance Analytic Appliance (HANA) running on IBM Power Systems. This publication provides case studies and how-to procedures that show backup and recovery scenarios. This publication provides information about how to protect data in an SAP HANA environment by using IBM Spectrum® Protect and IBM Spectrum Copy Data Manager. This publication focuses on the data protection solution, which is described through several scenarios. The information in this publication is distributed on an as-is basis without any warranty that is either expressed or implied. Support assistance for the use of this material is limited to situations where IBM Spectrum Scale or

IBM Spectrum Protect are supported and entitled, and where the issues are specific to a blueprint implementation. The goal of the publication is to describe the best aspects and options for backup, snapshots, and restore of SAP HANA Multitenant Database Container (MDC) single and multi-tenant installations on IBM Power Systems by using theoretical knowledge, hands-on exercises, and documenting the findings through sample scenarios. This document provides resources about the following processes:

- Describing how to determine the best option, including SAP Landscape aspects to back up, snapshot, and restore of SAP HANA MDC single and multi-tenant installations based on IBM Spectrum Computing Suite, Red Hat Linux Relax and Recover (ReAR), and other products. Documenting key aspects, such as recovery time objective (RTO) and recovery point objective (RPO), backup impact (load, duration, scheduling), quantitative savings (for example, data deduplication), integration

and catalog currency, and tips and tricks that are not covered in the product documentation. Using IBM Cloud® Object Storage and documenting how to use IBM Spectrum Protect to back up to the cloud. SAP HANA 2.0 SPS 05 has this feature that is built in natively. IBM Spectrum Protect for Enterprise Resource Planning (ERP) has this feature too. Documenting Linux ReaR to cover operating system (OS) backup because ReAR is used by most backup products, such as IBM Spectrum Protect and Symantec Endpoint Protection (SEP) to back up OSs. This publication targets technical readers including IT specialists, systems architects, brand specialists, sales teams, and anyone looking for a guide about how to implement the best options for SAP HANA backup and recovery on IBM Power Systems. Moreover, this publication provides documentation to transfer the how-to-skills to the technical teams and solution guidance to the sales team. This publication complements the documentation that is available at IBM

Knowledge Center, and it aligns with the educational materials that are provided by IBM Garage™ for Systems Technical Education and Training. *Desktop User Guide for MicroStrategy 10* Espresso Tutorials GmbH Salient Features:

- Explanation of the concept and frameworks of CRM systems.
- Comprehensive discussion on the main components of Siebel application modules, operating environment and tools.
- Coverage of the entire project cycle from the pre-requisites and methodology of eight-phased implementation to post-implementation support issues.
- Coverage of the issues like Balance Scorecard (BSC) of Siebel implementation, aspects of an intelligent customer-centric enterprise, privacy and security, and future prospects

Practical Guide to SAP GTS Part 1: SPL Screening and Compliance Management

IBM Redbooks

SAP is a powerful software that meets the requirement of business all over the world. This well-organised book comprising 34 chapters is useful for both

beginners and professionals. Being a learning guide and a user manual, the book will be immensely valuable for all those who are training to be SAP consultant. If you are a material/production manager, a QM professional or a business executive, you will find that the book brings a lot of convenience in your work and minimises inventory losses. A New Approach to SAP Implementation Structured dialog :The dialog between the consultant and the users should be based on the structure of this book. The consultant would demonstrate a business transaction, e.g. goods receipt, in its simplest form. He would then explain the data items on the screens, their meaning and significance. He would enquire whether the data item is relevant for the client company. The data items that are not relevant can be hidden in the implementation, and related configuration marked as not required. When the consultant would come to a section explaining IMG node, his questions to the user would be designed to collect the information required to configure that node. Prototyping :As the structured dialog continues, the consultant would go on doing the configuration. By the end of the dialog, the consultant would have built a company-specific prototype. Training and trials :The prototype would be a rough-cut implementation of SAP for the company. It would be used for training the users. After training, the users would try out the system. They would perform routine transactions several times using real-life data of their company. They would try different scenarios and record their observations. Refinement :After prototype trials, the consultant and the users would sit together to discuss what the users required to do, but could not do with the prototype. The consultant would use this input to refine the prototype and to build new functionality, if needed. Configuration manual :The documentation of SAP implementation includes a configuration manual. This configuration manual should be structured on the lines of this book as explained in Chapter 34. Such a configuration manual will be easy to understand as it groups logically related elements together. User manual :This book will serve as a generic user manual. Company-specific user manual can also be structured on the lines of this book including only company-specific guidelines for the users.
